<i>About the author</i>	<i>xi</i>
<i>Woodhead Publishing Series in Composites Science and Engineering</i>	<i>xiii</i>
<i>Preface</i>	<i>xvii</i>
Part I Types, processing and characterization	1
1 Introduction to environmentally friendly polymer nanocomposites	3
1.1 Introduction	3
1.2 Defining environmentally friendly polymer nanocomposites	4
1.3 Environmentally friendly polymer matrices	5
1.4 Environmentally friendly nanofillers/reinforcements	6
1.5 Processing of environmentally friendly polymer nanocomposites	7
1.6 Solution-blending and <i>in-situ</i> polymerization	9
1.7 Melt-blending	10
1.8 Performance and potential of environmentally friendly polymer nanocomposites	20
1.9 References	21
2 Environmentally friendly polymer matrices for composites	25
2.1 Introduction	25
2.2 Mechanisms of biodegradation and classification of biodegradable polymers	25
2.3 Biodegradable polymers derived from renewable sources	26
2.4 Biodegradable polymers derived from fossil-fuel resources	35
2.5 Summary: using biodegradable polymers as matrices	39
2.6 References	39

v

vi	Contents	
3	Environmentally friendly nanofillers as reinforcements for composites	41
3.1	Introduction	41
3.2	Nanoclays as reinforcements	42
3.3	Carbon nanotubes (CNTs) as reinforcements	55
3.4	References	67
4	Techniques for characterizing the structure and properties of polymer nanocomposites	74
4.1	Introduction	74
4.2	X-ray diffraction (XRD) and small-angle X-ray scattering (SAXS)	74
4.3	Transmission electron microscopy (TEM) and electron tomography	76
4.4	Scanning transmission electron microscopy (STEM)	79
4.5	Scanning electron microscopy (SEM) and focused-ion beam SEM (FIB-SEM)	82
4.6	Atomic force microscopy (AFM)	84
4.7	Optical microscopy (OM) and polarized optical microscopy (POM)	85
4.8	Infrared (IR) spectroscopy	86
4.9	Other techniques	87
4.10	References	87
5	Environmentally friendly polymer nanocomposites using polymer matrices from renewable sources	89
5.1	Introduction	89
5.2	Poly(lactic acid) (PLA)-based polymer nanocomposites	89
5.3	Polyalkanoate (PHA)-based polymer nanocomposites	103
5.4	Starch-based polymer nanocomposites	108
5.5	Cellulose-based polymer nanocomposites	124
5.6	Chitosan-based polymer nanocomposites	127
5.7	Protein-based polymer nanocomposites	132
5.8	References	139
6	Environmentally friendly polymer nanocomposites using polymer matrices from fossil fuel sources	157
6.1	Introduction	157
6.2	Poly(butylene succinate) (PBS)-based polymer nanocomposites	157

6.3	Poly[(butylene succinate)-co-adipate] (PBSA)-based polymer nanocomposites	170
6.4	Poly(ϵ -caprolactone) (PCL)-based polymer nanocomposites	177
6.5	Poly(butylene adipate-co-terephthalate) nanocomposites	194
6.6	Nanocomposites of other biodegradable polyesters	198
6.7	References	198
7	Processing of environmentally friendly polymer nanocomposite foams for packaging and other applications	208
7.1	Introduction	208
7.2	Preparation, characterization and properties of environmentally friendly polymer nanocomposite (EFPN) foams	209
7.3	References	219
Part II	Properties	223
8	Tensile properties of environmentally friendly polymer nanocomposites using biodegradable polymer matrices and clay/carbon nanotube (CNT) reinforcements	225
8.1	Introduction	225
8.2	Tensile properties of environmentally friendly polymer nanocomposites (EFPNCs) using clay reinforcements	226
8.3	Tensile properties of EFPNCs using carbon nanotube (CNT) reinforcements	253
8.4	References	263
9	Dynamic mechanical properties of environmentally friendly polymer nanocomposites using biodegradable polymer matrices and clay/carbon nanotube (CNT) reinforcements	269
9.1	Introduction	269
9.2	Dynamic mechanical properties of environmentally friendly polymer nanocomposites using clay reinforcements	270
9.3	Dynamic mechanical properties of environmentally friendly polymer nanocomposites using carbon nanotube (CNT) reinforcements	286
9.4	References	292

viii	Contents	
10	Thermal stability and flammability of environmentally friendly polymer nanocomposites using biodegradable polymer matrices and clay/carbon nanotube (CNT) reinforcements	295
10.1	Introduction	295
10.2	Thermal stability of environmentally friendly polymer nanocomposites using clay reinforcements	296
10.3	Thermal stability of environmentally friendly polymer nanocomposites using carbon nanotube (CNT) reinforcements	316
10.4	Fire resistant properties of environmentally friendly polymer nanocomposites using biodegradable polymer matrices and clay/carbon nanotube (CNT) reinforcements	319
10.5	References	323
11	Barrier properties of environmentally friendly polymer nanocomposites using biodegradable polymer matrices and clay/carbon nanotube (CNT) reinforcements	328
11.1	Introduction	328
11.2	Gas barrier properties	329
11.3	Water vapor permeability and water swelling behavior	340
11.4	References	343
12	Crystallization behavior, kinetics and morphology of environmentally friendly polymer nanocomposites using biodegradable polymer matrices and clay/carbon nanotube (CNT) reinforcements	346
12.1	Introduction	346
12.2	Isothermal and non-isothermal crystallization kinetics	347
12.3	Crystallization of clay-reinforced polymer nanocomposites	351
12.4	Crystallization of carbon nanotube (CNT)-reinforced polymer nanocomposites	375
12.5	References	380
13	Biodegradation behavior of environmentally friendly polymer nanocomposites using biodegradable polymer matrices and clay/carbon nanotube (CNT) reinforcements	385
13.1	Introduction	385
13.2	Biodegradation behavior of environmentally friendly polymer nanocomposites using clay reinforcements	386

13.3	Biodegradable behavior of environmentally friendly polymer nanocomposites using carbon nanotube (CNT) reinforcements	409
13.4	References	412
14	Rheological properties of environmentally friendly polymer nanocomposites (EFPNCs) using biodegradable polymer matrices and clay/carbon nanotube (CNT) reinforcements	415
14.1	Introduction	415
14.2	Dynamic oscillatory shear measurements	416
14.3	Steady shear measurements	437
14.4	Elongation flow rheology	445
14.5	References	447
15	Electrical and thermal conductivity of environmentally friendly polymer nanocomposites (EFPNCs) using biodegradable polymer matrices and clay/carbon nanotube (CNT) reinforcements	450
15.1	Introduction	450
15.2	Electrical conductivity	451
15.3	Thermal conductivity	461
15.4	References	462
Part III Summary		465
16	Applications, environmental impact and future development of environmentally friendly polymer nanocomposites (EFPNCs)	467
16.1	Introduction	467
16.2	Applications of environmentally friendly polymer nanocomposites	467
16.3	Assessing the environmental impact of environmentally friendly polymer nanocomposites	471
16.4	Current challenges facing environmentally friendly polymer nanocomposites	472
16.5	Future trends	475
16.6	References	476
