1	Main Issues in the Design of Extrusion Tools.....	1
1.1	Introduction.....	1
1.2	Extrusion Dies	3
1.2.1	Rheological Defects	3
1.2.2	Postextrusion Phenomena	14
1.2.2.1	Extrudate-swell	14
1.2.2.2	Draw-down.....	17
1.2.2.3	Shrinkage	18
1.2.3	Flow Balance	18
1.3	Calibration/Cooling Systems.....	22
1.3.1	Types of Calibration/Cooling.....	22
1.3.2	Main Parameters.....	24
1.4	Conclusion.....	30
2	Properties of Polymers.....	37
2.1	Introduction.....	37
2.2	Rheological Properties in the Molten State.....	39
2.2.1	Viscous Behaviour.....	39
2.2.2	Viscoelastic Behaviour	41
2.2.3	Dependence on Temperature and Pressure	44
2.2.4	Wall Slip	46
2.2.5	Flow Instabilities.....	47
2.3	Thermal Properties	49
2.3.1	Conductivity and Diffusivity.....	49

2.3.2	Interfacial Temperature and Heat Penetration.....	49
2.3.3	Temperature Evolution in Extrusion Flows.....	51
2.4	Crystallisation and Solid Properties	52
2.4.1	Generalities of Polymer Crystallisation	52
2.4.2	Processing Effects.....	55
2.4.3	Orientation	55
2.4.4	Viscoelastic Properties in the Solid State and in the Liquid-solid Transition Zone	56
2.5	Conclusion.....	59
3	Pipe Forming Tools	63
3.1	Introduction.....	63
3.2	Flow Through Pipe Dies	64
3.2.1	The Different Approaches from One-dimensional to Three-dimensional	64
3.2.2	One-dimensional Calculation.....	65
3.2.3	Temperature Computations	67
3.2.4	An Example of Nonaxisymmetric Flow	69
3.3	Pipe Calibration – Experimental	74
3.3.1	Technological Review	74
3.3.2	Objectives and Motivations	76
3.3.3	Velocity.....	76
3.3.4	Friction between the Pipe and the Calibrator	81
3.3.5	Temperature Evolution	83
3.3.6	Residual Stresses	84
3.4	Process-induced Microstructure and Properties.....	88
3.4.1	Orientation	88
3.4.2	Crystallinity	91
3.4.3	Surface State	93
3.4.4	Mechanical Properties.....	94
3.5	Modelling of Calibration	95

3.5.1	Calculation of the Temperature Field.....	95
3.5.1.1	General Presentation	95
3.5.1.2	Boundary Conditions	95
3.5.1.3	Crystallisation.....	96
3.5.1.4	Validation of the Model and Typical Results... ..	97
3.5.2	Stress Development Model.....	100
3.5.2.1	General Presentation	100
3.5.2.2	Boundary Conditions	101
3.5.2.3	Thermoelastic Model	102
3.5.2.4	Viscoelastic Model	103
3.5.2.5	Coupling with the Thermal Model.....	104
3.5.3	Orientation Development	105
3.5.4	Results of Residual Stress Calculations	107
3.6	Conclusion.....	109
4	Flat Film and Sheet Dies.....	113
4.1	Film Casting and Sheet Extrusion	113
4.2	Flow Distribution and Channel Design.....	114
4.3	Mathematical Modelling.....	120
4.4	Computer-assisted Flat Die Design.....	125
4.5	Flat Die Coextrusion.....	130
4.6	Rheological Considerations	133
4.7	Mechanical and Other Construction Considerations.....	134
4.8	Concluding Remarks	136
5	Blown Film Dies.....	141
5.1	Introduction to Blown Film Extrusion	141
5.2	Flow Distribution Considerations	145
5.3	Mathematical Modelling.....	150
5.4	Computer-assisted Spiral Die Design	154

Design of Extrusion Forming Tools

5.5	Multilayer Blown Film Extrusion.....	158
5.6	Mechanical, Thermal, Gauge Control and Rheological Considerations.....	163
5.7	Concluding Remarks	165
6	Profile Forming Tools.....	169
6.1	Introduction.....	169
6.2	Profile Extrusion Dies	170
6.2.1	Introduction.....	170
6.2.2	Profile Extrusion Die Constructive Solutions	172
6.2.2.1	Plate Dies	172
6.2.2.2	Stepped Dies	173
6.2.2.3	Streamlined Dies	174
6.2.3	Die Design Tasks.....	175
6.2.4	Flow Balance in Extrusion Dies	176
6.2.5	Automatic Optimisation	180
6.2.6	Outline of the Numerical Procedure	183
6.2.7	Case Study	185
6.2.7.1	Flow Channel Optimisation	186
6.2.7.2	Sensitivity Analysis.....	193
6.2.8	Conclusion.....	196
6.3	Calibration/Cooling Systems.....	198
6.3.1	Introduction.....	198
6.3.2	Design of Calibration/Cooling Systems	200
6.3.3	Outline of the Numerical Procedure	203
6.3.4	Case Study	205
6.3.5	Conclusion.....	211
7	Flexible Dies.....	221
7.1	Introduction.....	221
7.1.1	Annular Dies.....	222

7.1.2	Flex Ring Dies	226
7.1.2.1	Flex Ring Pipe Dies	228
7.1.2.2	Flex Ring Throttle.....	233
7.1.2.3	Flex Ring Blown Film Dies.....	234
7.1.2.4	Flex Ring Dies for the Production of Foamed Sheets and Films	237
7.1.2.5	Flex Ring Dies for Extrusion Blow Moulding	237
7.1.2.6	Flex Ring Profile Dies.....	242
7.1.3	Membrane Sheet Dies	244
7.1.4	Flat Film Dies with Super Flexible Lips.....	246
7.1.5	Universal Slit Dies for Sheets and Films	247
7.1.6	Membrane Dies for Coextrusion.....	248
7.1.7	Membrane Feedblocks for Coextrusion	250
8	Rotating Mandrel Dies.....	253
8.1	Introduction.....	253
8.2	Rotation for Extrudate Homogenisation.....	253
8.3	Rotation for Molecular Orientation/Morphology	256
8.4	Rotation for Producing Specific Product Shapes.....	264
8.4.1	Flexible Pipes	264
8.4.2	Nets	265
8.4.3	Coaxial Helical Cables.....	267
8.4.4	Encapsulation	267
8.4.5	Other Products	269
	Abbreviations.....	275
	Index	279
