Part I Introduction and basics

Chapter 1	Basics and terminology	3
	1.1 Introduction	3
	1.2 What the book will cover	4
	1.3 The importance of statistics	6
	1.4 Applications of statistical procedures in food science	6
	1.5 Focus and terminology	9
	References	12
	Software sources and links	13
Chapter 2	The nature of data and their collection	15
	2.1 Introduction	15
	2.2 The nature of data	15
	2.3 Collection of data and sampling	26
	2.4 Populations	36
	References	42
Chapter 3	Descriptive statistics	44
	3.1 Introduction	44
	3.2 Tabular and graphical displays	45
	3.3 Descriptive statistic measures	59
	3.4 Measurement uncertainty	69
	3.5 Determination of population nature and variance homogeneity	86
	References	89
Chapter 4	Analysis of differences – significance testing	91
	4.1 Introduction	91
	4.2 Significance (hypothesis) testing	92
	4.3 Assumptions of significance tests	102
	4.4 Stages in a significance test	103
	4.5 Selection of significance tests	108
	4.6 Parametric or non-parametric tests	112
	References	113

Chapter 5	Types of significance test	114
	5.1 Introduction	114
	5.2 General points	114
	5.3 Significance tests for nominal data (non-parametric)	115
	5.4 Significance tests for ordinal data (non-parametric)	122
	5.5 Significance tests for interval and ratio data (parametric)	129
	References	139
Chapter 6	Association, correlation and regression	141
	6.1 Introduction	141
	6.2 Association	142
	6.3 Correlation	144
	6.4 Regression	149
	References	153
Chapter 7	Experimental design	155
	7.1 Introduction	155
	7.2 Terminology and general procedure	155
	7.3 Sources of experimental error and its reduction	159
	7.4 Types of design	164
	7.5 Analysis methods and issues	174
	7.6 Applicability of designs	176
	References	176
Part II	Applications	
Chapter 8	Sensory and consumer data	181
	8.1 Introduction	181
	8.2 The quality and nature of sensory and consumer data	181
	8.3 Experimental design issues	183
	8.4 Consumer data (sensory and survey)	183
	8.5 Trained panel sensory data	199
	8.6 Analysis of relationships	216
	References	216
Chapter 9	Instrumental data	219
	9.1 Introduction	219
	9.2 Quality and nature of instrumental data	219
	9.3 Sampling and replication	222
	9.4 Experimental design issues	224
	9.5 Statistical analysis of instrumental data	226
	9.6 Chemical analysis applications	228
	9.7 Analysis of relationships	244
	References	244

Chapter 10	Food product formulation	246
	10.1 Introduction	246
	10.2 Design application in food product development	246
	10.3 Single ingredient effects	248
	10.4 Two or more ingredients	252
	10.5 Screening of many ingredients	257
	10.6 Formulation by constraints	263
	References	269
Chapter 11	Statistical quality control	271
	11.1 Introduction	271
	11.2 Types of statistical quality control	272
	11.3 Sampling procedures	273
	11.4 Control charts	274
	11.5 Acceptance sampling	288
	References	292
Chapter 12	Multivariate applications	293
	12.1 Introduction	293
	12.2 Multivariate methods and their characteristics	293
	12.3 Multivariate modes	294
	12.4 Relationship of consumer preference with sensory measures	310
	References	311
