

# Contents

Preface.....	xi
Acknowledgments .....	xv
Author.....	xvii
<b>Chapter 1 Introduction .....</b>	<b>1</b>
1.1 Quality.....	1
1.1.1 The meaning of quality.....	1
1.1.2 Quality activities.....	3
1.2 Robust design.....	4
1.3 Quality engineering .....	6
1.3.1 Overview .....	6
1.3.2 Taguchi's quality engineering .....	6
1.4 Structure of this book .....	7
References .....	8
<b>Chapter 2 Fundamentals of experimental design.....</b>	<b>11</b>
2.1 Basic principle .....	11
2.2 Factorial experiments.....	13
2.2.1 Single-factor experiment.....	13
2.2.1.1 An example.....	13
2.2.1.2 Statistical analysis.....	14
2.2.2 Two-factor experiment.....	18
2.3 Two-level full factorial design .....	21
2.3.1 Introduction of $2^k$ design .....	21
2.3.2 Data analysis for two-level full factorial experiment.....	22
2.3.2.1 The $2^2$ design.....	22
2.3.2.2 The $2^3$ design.....	28
2.4 Two-level fractional factorial design.....	32
2.4.1 One-half fraction of $2^k$ factorial design.....	32
2.4.2 The $2^{k-p}$ fractional factorial design .....	36
2.5 Three-level factorial design.....	37
2.6 Steps of DOE project.....	39
References .....	43
<b>Chapter 3 Principles of quality engineering.....</b>	<b>45</b>
3.1 Taguchi's perspectives .....	45
3.1.1 General philosophy .....	45
3.1.2 Unique points.....	46

3.2	Noise factors .....	47
3.3	Relationship between quality characteristics and parameters .....	48
3.4	Classification of parameters .....	49
3.4.1	Signal factors .....	49
3.4.2	Control factors .....	49
3.4.3	Noise factors .....	50
3.5	Three phases of quality engineering .....	51
3.5.1	System design .....	51
3.5.2	Parameter design .....	52
3.5.3	Tolerance design .....	52
3.6	Two-step optimization procedure .....	54
	References .....	55
<b>Chapter 4 Utilization of orthogonal arrays .....</b>		<b>57</b>
4.1	Introduction to orthogonal arrays .....	57
4.1.1	Orthogonal arrays .....	57
4.1.2	Orthogonality .....	59
4.2	Use of orthogonal arrays .....	60
4.3	Interaction .....	64
4.4	Linear graphs .....	65
4.5	Orthogonal arrays and fractional factorial designs .....	67
4.6	Special techniques for modifying orthogonal arrays .....	68
4.6.1	Column-merging method .....	68
4.6.2	Branching design .....	68
4.6.3	Dummy-level technique .....	71
4.6.4	Compound factor method .....	72
4.7	Summary .....	73
	References .....	76
<b>Chapter 5 Quality loss function and static signal-to-noise ratios .....</b>		<b>77</b>
5.1	The concept of quality loss .....	77
5.2	Taguchi's quality loss .....	80
5.2.1	Taguchi's definition of quality .....	80
5.2.2	Loss function .....	80
5.3	Types of quality loss functions .....	82
5.3.1	The nominal-the-best case .....	83
5.3.2	The smaller-the-better case .....	86
5.3.3	The larger-the-better case .....	86
5.3.4	The asymmetric nominal-the-best loss function .....	87
5.4	SN ratio .....	88
5.4.1	Introduction .....	88
5.4.2	Basic definition of SN ratio .....	88
5.5	SN ratios for static problems .....	91
5.5.1	The smaller-the-better type SN ratio .....	92
5.5.2	The larger-the-better type SN ratio .....	93
5.5.3	The nominal-the-best type SN ratio .....	94
5.5.4	Signed target type SN ratio .....	98
	References .....	100

<b>Chapter 6</b>	<b>Parameter design for static characteristics</b>	<b>101</b>
6.1	The experiment setup of parameter design	102
6.2	Procedures of static parameter design	104
6.2.1	Steps of static parameter design	104
6.2.2	Taguchi's two-step optimization procedure	105
6.3	Data analysis of parameter optimization experiment	108
6.3.1	Estimation of control factor effects	108
6.3.2	Analysis of variance	110
6.3.3	Prediction and confirmation	114
6.4	The issue of interactions	117
6.5	Examples of parameter design with static characteristics	118
6.6	Case studies of parameter design with static characteristics	127
6.6.1	Case study: Optimization of Cu wire bonding process for IC assembly	127
6.6.1.1	The problem	127
6.6.1.2	Implementation of Taguchi methods for Cu wire bonding	128
6.6.1.3	Comparison of cost savings	131
6.6.2	Case study: Optimization of optical performance of broadband tap coupler	131
6.6.2.1	The problem	131
6.6.2.2	Implementation of Taguchi methods for improving tap coupler optical performance	132
6.6.2.3	A comparison	136
6.7	Operating window	136
6.8	Computer-aided parameter design	140
6.9	Analysis of discrete data	150
6.9.1	SN ratio for fraction defective type problem	150
6.9.2	Analysis of ordered categorical data	154
References		163
<b>Chapter 7</b>	<b>Parameter design for dynamic characteristics</b>	<b>165</b>
7.1	Introduction	165
7.2	Basic SN ratios for dynamic problems	168
7.2.1	Zero-point proportional equation	168
7.2.1.1	Dynamic-type SN ratio	169
7.2.1.2	Dynamic-type SN ratio calculation	169
7.2.1.3	Taguchi's dynamic-type SN ratio	175
7.2.2	Reference-point proportional equation	177
7.2.3	Linear equation	179
7.3	Procedures of dynamic parameter design	181
7.3.1	Steps of dynamic parameter design	182
7.3.2	Two-step optimization procedure for dynamic problems	182
7.4	Examples of parameter design with dynamic characteristics	184
7.5	Case studies of parameter design with dynamic characteristics	187
7.5.1	Case study: Improvement of measurement accuracy of blood glucose strip	188
7.5.1.1	The problem	188
7.5.1.2	Implementation	188
7.5.1.3	Comparison	190

7.5.2	Case study: Optimization of optical whiteness ratio for flexible display .....	191
7.5.2.1	The problem.....	191
7.5.2.2	Implementation .....	192
7.5.2.3	Comparison .....	201
7.6	Other types of dynamic problems .....	201
7.6.1	When true values of signal factor levels are unknown .....	201
7.6.2	When ideal functions are not linear .....	203
7.6.3	When input is not confined to one signal factor.....	205
7.6.4	When no noise exists.....	207
References	.....	210
<b>Chapter 8</b>	<b>Implementing parameter design .....</b>	<b>211</b>
8.1	Analysis in planning stage.....	211
8.1.1	Project scope.....	211
8.1.2	Energy transformation.....	212
8.1.3	Ideal function .....	212
8.1.4	Measure of response .....	213
8.1.5	P-diagram .....	213
8.2	Selection of quality characteristic .....	214
8.2.1	Four different levels of quality proposed by Taguchi.....	214
8.2.2	Guidelines for selecting quality characteristics .....	214
8.2.2.1	Continuous and easy to measure .....	215
8.2.2.2	Absolute zero.....	215
8.2.2.3	Additive or monotonic .....	215
8.2.2.4	Complete .....	216
8.2.2.5	Fundamental.....	216
8.3	Selection of noise and control factors .....	217
8.3.1	Selection of noise factors.....	217
8.3.2	Selection of control factors .....	217
8.3.3	Control and noise factors in product development cycle .....	218
8.4	Differences between Taguchi methods and classical experimental design .....	218
8.4.1	Purpose of the experiment.....	219
8.4.2	Response .....	219
8.4.3	Modeling.....	220
8.4.4	Interactions between control factors.....	220
8.4.5	Experimental bias .....	220
8.4.6	Experimental layout.....	221
8.4.7	Significance tests.....	221
References	.....	222
<b>Chapter 9</b>	<b>Tolerance design.....</b>	<b>223</b>
9.1	Concepts of tolerance design .....	223
9.2	Procedures of tolerance design.....	225
References	.....	232
<b>Chapter 10</b>	<b>Mahalanobis–Taguchi system.....</b>	<b>233</b>
10.1	Mahalanobis distance .....	233
10.2	Feature selection .....	237

10.2.1	The larger-the-better-type SN ratio.....	238
10.2.2	The dynamic-type SN ratio.....	238
10.3	Mahalanobis-Taguchi system.....	239
10.4	Case study: RF inspection process.....	241
10.4.1	The problem.....	241
10.4.2	Implementation of MTS.....	242
10.4.3	The benefit.....	249
10.5	Case study: Pressure ulcer development.....	250
10.5.1	The problem.....	250
10.5.2	Pressure ulcer data.....	250
10.5.3	Implementation of MTS.....	251
10.5.4	Discussions.....	254
References	.....	255

**Chapter 11 Response surface methodology .....257**

11.1	Introduction to RSM.....	257
11.1.1	Overview.....	257
11.1.2	RSM strategy.....	259
11.2	Response surface designs.....	260
11.2.1	Central composite design.....	260
11.2.2	Box-Behnken design.....	261
11.2.3	D-optimal design.....	261
11.3	Fitting models.....	264
11.3.1	First-order model.....	265
11.3.2	Steepest ascent method.....	266
11.3.3	Second-order model.....	267
11.4	Multiobjective optimization.....	274
11.5	Response surface approach for process robustness.....	278
11.6	Case study: Improvement of fracture resistance of medium- and small-sized TFT-LCD.....	280
11.6.1	The problem.....	280
11.6.2	Implementation of RSM.....	281
11.6.3	The benefit.....	283
11.7	Case study: Optimization of performance of intermetal dielectric process.....	284
11.7.1	The problem.....	284
11.7.2	DMAIC.....	285
11.7.2.1	Define phase.....	285
11.7.2.2	Measure phase.....	286
11.7.2.3	Analyze phase.....	286
11.7.2.4	Improve phase.....	286
11.7.2.5	Control phase.....	288
11.7.3	A comparison.....	288
References	.....	290

**Chapter 12 Parameter design using computational intelligence .....293**

12.1	Introduction.....	293
12.2	Neural networks.....	294
12.2.1	Introduction to NNs.....	294
12.2.1.1	Typical architecture.....	295

12.2.1.2	Learning .....	296
12.2.1.3	Common activation functions.....	296
12.2.2	BP neural network.....	297
12.2.2.1	Architecture.....	297
12.2.2.2	BP algorithm.....	298
12.2.2.3	Network training.....	299
12.3	Genetic algorithms .....	300
12.3.1	Basics of GAs.....	300
12.3.1.1	Chromosome representations.....	301
12.3.1.2	Fitness function.....	302
12.3.1.3	Initial population and population size.....	302
12.3.1.4	Stopping criteria.....	302
12.3.2	Genetic operators.....	302
12.3.2.1	Selection .....	302
12.3.2.2	Crossover.....	303
12.3.2.3	Mutation .....	304
12.3.2.4	Elitist strategy.....	304
12.3.3	Advantages and applications.....	304
12.4	Parameter design using computational intelligence .....	305
12.5	Case studies.....	307
12.5.1	Case study: Optimization of IC wire bonding process.....	307
12.5.1.1	The problem.....	308
12.5.1.2	Implementation of Taguchi methods.....	308
12.5.1.3	Implementation of NN+GA.....	309
12.5.1.4	A comparison .....	310
12.5.2	Case study: Optimization of performance of intermetal dielectric process.....	310
12.5.2.1	Implementation of NN+GA.....	310
12.5.2.2	The comparison.....	311
12.5.3	Case study: Optimization of dynamic parameter design .....	312
12.5.3.1	Implementation of NN+GA.....	312
12.5.3.2	The comparison.....	312
12.5.4	Case study: Parameter optimization design for touch panel laser cutting process.....	313
12.5.4.1	The problem.....	313
12.5.4.2	Implementation of proposed procedure.....	313
12.5.4.3	The benefit.....	316
References .....		318
Appendix A: Percentage points of the <i>F</i> distribution.....		321
Appendix B: Orthogonal arrays and linear graphs .....		323
Answers to selected exercises .....		357
Glossary.....		363
Index .....		371
