

CONTENTS.

CHAPTER I.

	PAGE
1. INTRODUCTION AND PROPERTIES OF STEAM	1
Entropy	3
2. FLOW OF STEAM	10
Critical Velocity	13
Example	18
3. CLASSIFICATION OF STEAM TURBINES ACCORDING TO THE ARRANGEMENT OF VANES	21

CHAPTER II.

THE FLOW OF STEAM THROUGH THE STEAM TURBINE.

1. PERIPHERAL VELOCITY	22
MEANS OF REDUCING THE NUMBER OF REVOLUTIONS .	23
A. <i>In Impulse Turbines</i>	23
(a) Speed-reducing gear	23
(b) Larger wheel diameter	23
(c) Velocity Staging	23
(d) Pressure Staging	24
(e) Combination of Pressure and Velocity Staging .	25
(f) The use of rotors running in opposite directions	26
(g) Repeated admission	26
B. <i>In Reaction Turbines</i>	27

	PAGE
2. CHARACTERISTIC FEATURES OF IMPULSE AND RE-ACTION TURBINES	28
(a) Impulse or Action Turbines	28
(b) Reaction Turbines	30
3. PASSAGE OF THE STEAM IN TURBINES	31
4. LOSSES OF VELOCITY, PRESSURE, AND STEAM IN THE STEAM TURBINE	37
(a) Losses in the nozzle	37
(b) The losses of velocity in the rotor vanes	38
(c) Losses through shocks, eddies, and vibration	38
(d) Clearance losses	39
(e) The losses from radiation of heat	40
(f) Friction losses	40
(g) Centrifugal force on water	44
(h) Exhaust losses	44
5. GRAPHICAL DETERMINATION OF THE INLET AND OUT-LET VELOCITIES	45
(a) Impulse Turbine with one Pressure Stage	46
(b) Impulse Turbines with Three Pressure Stages	46
(c) Impulse Turbine with Three Velocity Stages	48
(d) Impulse Turbine with Two Pressure Stages and Two Velocity Stages to Each	49
(e) Multi-stage Reaction Turbine	50
6. PERIPHERAL AND STEAM VELOCITIES OF THE DIFFERENT TYPES OF TURBINES	51
(a) Impulse Turbines	51
(b) Reaction Turbines	53
7. OUTPUT, EFFICIENCY, STEAM CONSUMPTION	54
(a) OUTPUT AND EFFICIENCY	54
<i>Impulse Turbines</i>	54
(a) Turbine with One Pressure Stage and One Velocity Stage (De Laval)	55
(b) Turbine with One Pressure Stage and Two or more Velocity Stages	56
(c) Turbines with Several Pressure Stages (Rateau, Zölly)	57
(d) Turbines with Several Pressure and Velocity Stages (Curtis)	58

	PAGE
<i>Reaction Turbines</i>	58
Practical Determination of the Effective Output (B.H.P.)	60
(b) STEAM CONSUMPTION	61
8. TYPICAL CALCULATIONS FOR A STEAM TURBINE WITH THREE VELOCITY STAGES FOR AN OUTPUT OF 50 B.H.P.	65
9. EXAMPLE OF GRAPHICAL DETERMINATION OF THE CHIEF DIMENSIONS	69

CHAPTER III.

DETAILS OF STEAM TURBINES.

1. CASINGS	72
2. NOZZLES AND GUIDES	85
(a) Nozzles	85
(b) Guides	86
3. ROTORS AND ROTOR VANES	91
(a) De Laval Steam Turbine	92
(b) Rateau Turbine	94
(c) Zöfely Turbine	95
(d) Curtis Turbine	97
(e) Holzwarth Turbine	97
(f) A.E.G. Turbine	98
(g) Parsons and Parsons-Westinghouse Systems	98
(h) Allis-Chalmers Turbine	102
(i) Strength of Rotor Discs and Drums	108
SHAFTS	104
CRITICAL SPEEDS	105
BALANCING THE ROTATING PARTS	107
BEARINGS	108
LUBRICATING ARRANGEMENTS	115
1. Parsons Turbine	115
2. Rateau Turbine	116
3. Zöfely Turbine	116
4. Curtis Turbine	116

	PAGE
5. A.E.G. Turbine	116
6. De Laval Turbine	116
7. Hamilton-Holzwarth Turbine	117
8. Melms and Pfenniger	117
STUFFING BOXES	117
GOVERNING STEAM TURBINES	122
Governors acting upon nozzles	135
THRUST-ABSORBING DEVICES	135
OVERLOAD VALVES	136
REVERSING MEANS	137

CHAPTER IV.

GENERAL ARRANGEMENT OF VARIOUS TURBINES IN PRACTICE.

1. The De Laval Steam Turbine	140
2. Rateau Turbine	145
3. The Zölly Turbine	147
4. The Curtis Turbine	150
5. A.E.G. Turbines	153
6. The Hamilton-Holzwarth Turbine	155
7. Elektra Radial Impulse Turbine	156
8. Parsons Turbine	158
9. Westinghouse Turbine	163
10. Melms and Pfenniger Turbine	163
11. Sulzer Turbine	163
12. Kerr Turbine	165

CHAPTER V.

CONDENSERS. UTILIZATION OF EXHAUST STEAM.

1. Degree of Vacuum and Arrangement of Condenser	166
2. Utilizing Exhaust Steam for Working Turbines— Heat Accumulators	169

CHAPTER VI.

PRACTICAL APPLICATION OF STEAM TURBINES.

	PAGE
Dynamos	173
High-lift Centrifugal Pumps	174
Feed-water Pumps	177
Blowers	178
Marine Propulsion	179
Floor Space	184
Relative Advantages of Turbines and Reciprocating Engines	185
INDEX	187
