<b>Preface</b>	<b>xv</b>
<b>Chapter 1 The Rice Xa21 Immune Receptor Recognizes a Novel Bacterial Quorum Sensing Factor</b>	<b>1</b>
Chang Jin Park and Pamela C. Ronald	
Introduction	1
Plants and Animal Immune Systems	2
A Plethora of Immune Receptors Recognize Conserved Microbial Signatures	2
Ax21 Conserved Molecular Signature	3
Non-RD Receptor Kinase Xa21	8
XA21-Mediated Signaling Components	11
Cleavage and Nuclear Localization of the Rice XA21 Immune Receptor	13
Regulation in the Endoplasmic Reticulum: Quality Control of XA21	14
Systems Biology of the Innate Immune Response	15
Acknowledgments	16
References	16
<b>Chapter 2 Molecular Basis of Effector Recognition by Plant NB-LRR Proteins</b>	<b>23</b>
Lisong Ma, Harrold A. van den Burg, Ben J. C. Cornelissen, and Frank L. W. Takken	
Introduction	23
Building Blocks of NB-LRRs; Classification and Structural Features of Subdomains	24
Putting the Parts Together: Combining the Domains to Build a Signaling Competent NB-LRR Protein	29
Stabilization and Accumulation of NB-LRR Proteins: Their Maturation and Stabilization	30
When the Pathogen Attacks: Perception and Signaling by NB-LRR Proteins	33
Conclusion	35
Acknowledgments	35
References	36

<b>Chapter 3</b>	<b>Signal Transduction Pathways Activated by R Proteins</b>	<b>41</b>
	Gitta Coaker and Douglas Baker	
	Introduction	41
	R Protein Stability	42
	Genetic Separation of CC and TIR-NB-LRR Signaling	42
	NB-LRRs Exhibit Modular Structure and Function	44
	Subcellular Localization of NB-LRRs	45
	NB-LRRs Can Function in Pairs	47
	Common Immune Signaling Events Downstream of R Protein Activation	48
	Conclusion	50
	Acknowledgments	50
	References	50
<b>Chapter 4</b>	<b>The Roles of Salicylic Acid and Jasmonic Acid in Plant Immunity</b>	<b>55</b>
	Pradeep Kachroo and Aardra Kachroo	
	Introduction	55
	Biosynthesis of SA	55
	Derivatives of SA	57
	SA and Systemic Acquired Resistance	58
	SA Signaling Pathway	60
	Jasmonates Mediate Plant Immunity	62
	JA Biosynthetic Mutants Are Altered in Microbial Defense	63
	Receptor Protein Complex Perceives JA	65
	Transcription Factors Regulate JA-Derived Signaling	66
	JA Regulates Defense Gene Expression	68
	Conclusion	68
	Acknowledgments	68
	References	69
<b>Chapter 5</b>	<b>Effectors of Bacterial Pathogens: Modes of Action and Plant Targets</b>	<b>81</b>
	Feng Feng and Jian-Min Zhou	
	Introduction	81
	Overview of Plant Innate Immunity	81
	Overview of Type III Effectors	83
	Host Targets and Biochemical Functions	86
	Conclusion	99
	Acknowledgments	99
	References	99
<b>Chapter 6</b>	<b>The Roles of Transcription Activator–Like (TAL) Effectors in Virulence and Avirulence of <i>Xanthomonas</i></b>	<b>107</b>
	Aaron W. Hummel and Adam J. Bogdanove	
	Introduction	107
	TAL Effectors Are Delivered into and May Dimerize in the Host Cell	107

TAL Effectors Function in the Plant Cell Nucleus	108
AvrBs4 Is Recognized in the Plant Cell Cytoplasm	109
TAL Effectors Activate Host Gene Expression	109
Central Repeat Region of TAL Effectors Determines DNA Binding Specificity	110
TAL Effectors Wrap Around DNA in a Right-Handed Superhelix	111
TAL Effector Targets Include Different Susceptibility and Candidate Susceptibility Genes	112
<i>MtN3</i> Gene Family Is Targeted by Multiple TAL Effectors	114
Promoter Polymorphisms Prevent <i>S</i> Gene Activation to Provide Disease Resistance	115
Nature of the Rice Bacterial Blight Resistance Gene <i>xa5</i> Suggests TAL Effector Interaction With Plant Transcriptional Machinery	115
Executor <i>R</i> Genes Exploit TAL Effector Activity for Resistance	116
Diversity of TAL Effectors in <i>Xanthomonas</i> Populations Is Largely Unexplored	117
TAL Effectors Are Useful Tools for DNA Targeting	118
Conclusion	118
References	119
 <b>Chapter 7    Effectors of Fungi and Oomycetes: Their Virulence and Avirulence Functions and Translocation From Pathogen to Host Cells</b>	 <b>123</b>
Brett M. Tyler and Thierry Rouxel	
Introduction	123
Plant-Associated Fungi and Oomycetes	125
Identification of Fungal and Oomycete Effectors	126
Defensive Effectors: Effectors That Interfere With Plant Immunity	137
Offensive Effectors: Effectors That Debilitate Plant Tissue	146
Effectors That Contribute to Fitness via Unknown Mechanisms	149
Entry of Intracellular Effectors	149
Genome Location and Consequences for Adaptation/Dispensability	152
Conclusion	153
Acknowledgments	154
References	154
 <b>Chapter 8    Plant-Virus Interaction: Defense and Counter-Defense</b>	 <b>169</b>
Amy Wahba Foreman, Gail J. Pruss, and Vicki Vance	
Introduction	169
RNA Silencing as an Antiviral Defense Pathway – the Beginning of the Story	169
Small Regulatory RNA Biogenesis and Function	172
The Silencing Mafia – the Protein Families	174
Defense: Antiviral RNA Silencing Pathways	177
Counter-Defense: Viral Suppressors of Silencing and Their Targets	178
Viral Suppressors of Silencing and Endogenous Small Regulatory RNA Pathways	181
References	182

<b>Chapter 9</b>	<b>Molecular Mechanisms Involved in the Interaction Between Tomato and <i>Pseudomonas syringae</i> pv. <i>tomato</i></b>	<b>187</b>
	André C. Velásquez and Gregory B. Martin	
	Introduction	187
	PAMP-Triggered Immunity in Solanaceae	188
	<i>Pseudomonas syringae</i> pv. <i>tomato</i> Virulence Mechanisms	192
	Effector-Triggered Immunity in Solanaceae	197
	Races of <i>Pseudomonas syringae</i> pv. <i>tomato</i>	200
	ETI Is Involved in Nonhost Resistance to <i>Pseudomonas syringae</i> Pathovars	200
	ETI Signaling Pathways in Solanaceae	201
	Conclusion	203
	Acknowledgments	204
	References	204
<b>Chapter 10</b>	<b><i>Cladosporium fulvum</i>–Tomato Pathosystem: Fungal Infection Strategy and Plant Responses</b>	<b>211</b>
	Bilal Ökmen and Pierre J. G. M. de Wit	
	Introduction	211
	History of the Interaction Between <i>C. fulvum</i> and Tomato	212
	Compatible and Incompatible Interactions	212
	Cf-Mediated Downstream Signaling	219
	Effectors in Other Fungi with Similar Infection Strategies	220
	Conclusion	221
	References	221
<b>Chapter 11</b>	<b>Cucumber Mosaic Virus–<i>Arabidopsis</i> Interaction: Interplay of Virulence Strategies and Plant Responses</b>	<b>225</b>
	Jack H. Westwood and John P. Carr	
	Introduction	225
	Biology of CMV	226
	Host Resistance Responses to Virus Infection	230
	Targeting of Host Factors by the Virus	236
	Phenomenon of Cross-Protection	237
	Functions of SA in Antiviral Defense	237
	Metabolic Responses to CMV Infection	239
	Vector-Mediated Transmission	240
	Conclusion	242
	Acknowledgments	242
	References	243
<b>Chapter 12</b>	<b>Future Prospects for Genetically Engineering Disease-Resistant Plants</b>	<b>251</b>
	Yan-Jun Chen, Michael F. Lyngkjær, and David B. Collinge	
	Introduction	251
	Targets for Second-Generation Transgenic Strategies for Resistance	252
	Hormones	253

## CONTENTS

ix

Defense Modulation	256
Transcription Factors	260
Promoters for Transgenic Disease Resistance	265
Implementation of Transgenic Resistance in the Field	266
Why Choose a Transgenic Approach?	267
Conclusion	269
Acknowledgments	269
References	269
