List of Figures xvii

List of Tables xxi

PART ONE | WAVE ONE: 1790–1851

1. *Rivers of Steam* 3

- 1.1 Steam Boats and Stream Boats 3
- 1.2 The Steam Engine 5
- 1.3 Bridgewater 8
- 1.4 Erie and Emulation: Canals in the United States 12
- 1.5 France in America: The US Army Corps of Engineers 17
 - 1.5.1 Ohio-Mississippi River System 20
 - 1.5.2 Kentucky River 21
 - 1.5.3 Tenn-Tom 22
- 1.6 Discussion 23

2. *Design by Design: The Birth of the Railway* 25

- 2.1 Plateways to Railways 25
- 2.2 Profile: Richard Trevithick 28
- 2.3 Profile: George Stephenson 28
- 2.4 Stretching the State of the Art 29
- 2.5 Design by Design 30
- 2.6 Defining the Railway 31
- 2.7 Discussion 31

3. *Incentivizing Investment: Roads through the Turnpike Era* 35

- 3.1 Steam Cars 35
- 3.2 From Trails to Roads 36
- 3.3 The Corvée 37
 - 3.3.1 The Corvée in England 37
 - 3.3.2 The Heart of Midlothian 38
 - 3.3.3 The Corvée in France 39

- 3.3.4 The Begar in South Asia 39
- 3.3.5 The Corvée in Japan 40
- 3.4 Profile: John Loudon McAdam 41
- 3.5 Profile: Thomas Telford 42
- 3.6 Stagecoach 42
- 3.7 Turnpike Trusts 44
- 3.8 Turnpike Companies 47
- 3.9 Plank Roads 52
- 3.10 Mail and the Gospel of Speed 53
- 3.11 Fin de Siècle 55
- 3.12 Discussion 56

PART TWO | PHASE I OF THE LIFE-CYCLE

4. *Inventing and Innovating* 59

- 4.1 There Are Multiple Models for Innovation and Invention 59
- 4.2 Essential Knowledge May Follow Innovation 61
- 4.3 Technology Progresses with Building Blocks 62
- 4.4 Patents May Constrain Innovation 62
- 4.5 Innovation Requires an Adequate Design Serving the Right Market Niche 63
- 4.6 Policies May Be Forged to Aid Infant Industries 63
- 4.7 The Potential for Improvements as the Predominant Technology Emerges Is Critical 64
- 4.8 An Innovation Has to Be Consistent with Market (Client) Values 64
- 4.9 For a System to Work, All Components Have to Function Appropriately 65
- 4.10 Innovative People Abound 65
- 4.11 Innovations Must Finesse Existing Constraints 65
- 4.12 Innovative People Cooperate 65
- 4.13 Excuses for Inaction Abound 66
- 4.14 Innovation Can Be Innovated 66
- 4.15 Transportation Development Is Chancy 66

PART THREE | WAVE TWO: 1844–1896

5. *The Modern Maritime Modes Emerge* 71

- 5.1 Beginnings 71
- 5.2 Trading Companies 72
- 5.3 A Port in a Storm 74
- 5.4 Cargo Ships 76
- 5.5 Ocean Liners 76
- 5.6 The *SS Great Eastern* 78
- 5.7 Profile: Marc and Isambard Kingdom Brunel 80

6. *Railroads Deployed: Learning from Experience* 82

- 6.1 Trials and Errors 82
- 6.2 Emulation 84

- 6.3 Learning about Networks: The Legrand Star Plan 86
 - 6.4 Learning about Technology 87
 - 6.5 Learning about Passenger Service Standards 90
 - 6.6 Learning about Freight Rate-Making 92
 - 6.7 Learning about Embedded Policies: The Org Chart 93
 - 6.8 Learning about Rules: The Code of Operations 96
 - 6.9 Learning about Time: The Rise of the Time Zone 96
 - 6.10 Learning about Traveler Information 97
 - 6.11 Learning about Right-of-Way: The Conflict between Land for Access and Land for Activity 98
 - 6.12 Learning about Alliances 101
 - 6.13 Profile: Cornelius Vanderbilt 102
 - 6.14 Learning about Finance: The Erie War 103
 - 6.15 Comments by Social Critics 106
7. *Good Roads, Bicycle Mechanics, and Horseless Carriages* 109
- 7.1 Bicycles as Building Blocks 109
 - 7.2 From Horse to Horseless 110
 - 7.3 Road Trips and Races 115
 - 7.4 Object Lessons 116
 - 7.5 Discussion 118
8. *Transit* 119
- 8.1 Omnes Omnibus 119
 - 8.2 Going Underground 120
 - 8.3 Above and Below New York 122
 - 8.4 Transit Surfaces 124
 - 8.5 Metro-Land 127
 - 8.6 Discussion: The Land Value Metric 129
9. *Telegraph* 134
- PART FOUR | PHASE 2 OF THE LIFE-CYCLE
10. *The Magic Bullet* 141
- 10.1 Growth 141
 - 10.2 Growth Takes Off Due to Magic Bullets 141
 - 10.3 Standardization Enables Magic Bullets, Thwarts Innovation 143
 - 10.4 Purported Magic Bullets Are Sometimes Tragic Bullets 143
 - 10.5 The Trajectory of Magic Bullets Is Difficult to Alter 145
 - 10.5.1 Intervention can slow down or speed up the temporal pace or realization of system development 145
 - 10.5.2 Interventions can coordinate between disjoint actors 146
 - 10.5.3 Hardening implies interventions may be inconsequential 146
 - 10.6 Speed enables specialization 147
 - 10.7 Discussion 150

PART FIVE | WAVE THREE: 1890–1950

11. *American Shipping* 155

12. *Taking Flight* 160

- 12.1 Profile: Juan Trippe 160
- 12.2 System Evolution 161
- 12.3 Air Mail 164
- 12.4 Discussion 165

13. *Railroads Regulated* 167

- 13.1 Federal Triangle 167
- 13.2 Correspondence and the Locus of Authority 168
- 13.3 Mighty Elevators of Grain 170
- 13.4 Government's Proactive, Normative Rule 172
- 13.5 Regulating Labor Relations 174
- 13.6 Deregulation 176
- 13.7 Comparisons of the Developed World 177
- 13.8 Iron Triangles and Aluminum Rectangles 179
- 13.9 Discussion 181

14. *Bustitution* 183

- 14.1 Myths in Motion 183
- 14.2 Deterioration 184
- 14.3 Motorization 187
- 14.3.1 Twin Cities Transit 188
- 14.4 Angels and Devils 188
- 14.5 Symbolic Systems 190
- 14.6 Discussion 193

15. *Public Roads* 194

- 15.1 Whitetop and Blacktop 194
- 15.2 Auto Trails 196
- 15.3 Safe Streets 198
- 15.4 Transportation and Traffic Planning 200
- 15.5 Free Curb Parking, or Who Controls the Roads as Commons? 201
- 15.6 The 7 Percent Solution 202
- 15.7 Financing Roads (c. 1920) 204
- 15.8 Bureau of Public Roads 207
- 15.9 Discussion: Highway Needs 210

16. *Urban Planning: Who Controls the Turf?* 212

- 16.1 Introduction 212
- 16.2 The Urban Wheel 212
- 16.3 Civil Engineering 215
- 16.4 City Planning 216

- 16.5 City Planning versus Transportation Planning 218
- 16.6 Other Varieties of Transportation Planning 220
- 16.7 Discussion 222

17. Telephone 224

- 17.1 Harmonious Bells 224
- 17.2 Regulation Ringing 225
- 17.3 The Bell Cracks 227
- 17.4 All the King's Horses 229
- 17.5 Bell Labs 230
- 17.6 Discussion 231

PART SIX | PHASE 3 OF THE LIFE-CYCLE

18. *Aging in Place, Aging sans Grace* 235

- 18.1 Managing 235
- 18.2 Increases in Productivity Diminish or Vanish as Systems Mature 235
- 18.3 Escape, Adapt, Accept are the Three Basic Strategies for Organizations at Maturity 236
- 18.4 Obduracy Is Standard Practice in Mature Organizations 237
- 18.5 The Behavior of the System is Conditioned by Its Structure 239
- 18.6 Spandrels Create Hooks for Innovation 240
- 18.7 Consequential Developments Occur in Second Order Systems 240
- 18.8 Government Policies for Maturity Are Negotiated Contracts with the Regulated 242
- 18.9 Large System Innovations Are the Work of Blind Giants 243
- 18.10 Maturity Creates Imperatives 245
- 18.11 Maturity Creates Opportunities 246
- 18.12 Transportation Is Possessed with Zombies 247

PART SEVEN | WAVE FOUR: 1939–1991

19. *Building Blocks: The Logistics Revolution* 251

- 19.1 McLean's Insight: Inside the Box 251
- 19.2 Matson's Innovations 254
- 19.3 Alliances 255
- 19.4 Container Ports 256
- 19.5 Labor Arrangements 258
- 19.6 Discussion 260

20. *The Jet Age* 262

- 20.1 Supersonic 262
- 20.2 Growth Pulses 264
- 20.3 Cabotage 265
- 20.4 Federal Express 266
- 20.5 Networked Organization 268
- 20.5.1 Alliances 268

- 20.5.2 Reservation Systems 268
- 20.6 Deregulation 269
- 20.7 Security Theater 271
- 20.8 Discussion 272

21. Railroads Rationalized 275

- 21.1 Rationalization: Nationalization Style 275
- 21.2 Rationalization: Congressional Style 276
- 21.3 Rationalization: Commission Style 277
- 21.4 Rationalization: Corporate Style 278
- 21.5 Rationalization: Conrail/Amtrak Style 279
- 21.6 Rationalization: Iowa Style 281
- 21.7 Rationalization: Community Style 282
- 21.8 Rationalization: LA Style: The Alameda Corridor 283
- 21.9 Rationalization: Tracks or Wires: Dakota, Minnesota and Eastern 285
- 21.10 Rationalization: Coming to Peace with Modal Competition 286
- 21.11 Rationalization: Laying a New Path 286
- 21.12 Labor Rationalized 289
- 21.13 Discussion 289

22. Interstate 291

- 22.1 Limited Access 291
- 22.2 Inventing the Interstate 292
 - 22.2.1 Success Has Many Fathers 292
 - 22.2.2 Regard for the Bureau of Public Roads 295
 - 22.2.3 The Bragdon Committee 296
- 22.3 Freeways Rising 298
 - 22.3.1 Freeways in Japan 298
 - 22.3.2 Building Urban Highways: The Case of I-94 298
 - 22.3.3 Freeway Revolts 301
 - 22.3.4 Profile: Robert Moses 301
 - 22.3.5 Profile: Jane Jacobs 303
- 22.4 The Interstate at Maturity 303
 - 22.4.1 Rebuilding Urban Highways: The Case of the Big Dig 303
 - 22.4.2 Building Suburban Highways: Inter-County Connector 304
 - 22.4.3 The Last Interstate 307
 - 22.4.4 Private Roads? The Case of the Dulles Greenway, Virginia 307
 - 22.4.5 High-Occupancy Vehicles 309
 - 22.4.6 HOT Lanes and HOT Networks 311
- 22.5 Ideas: Privatization versus a Public Utility Model 311
- 22.6 Freight 316
 - 22.6.1 Federal Trucking Regulation 316
 - 22.6.2 Idea: Bifurcation 317

- 22.6.3 Idea: Truck Collector Service 319
- 22.7 Discussion 320
- 23. *Recapitalization* 323
 - 23.1 Federalization 323
 - 23.2 San Francisco's BART 326
 - 23.3 Washington's Metro 328
 - 23.4 Other People's Money: Rational Behavior in Irrational America 328
 - 23.5 Docklands Light Railway and the Jubilee 330
 - 23.6 Challenge: Serving the Disadvantaged 333
 - 23.7 Universal Design 334
 - 23.8 Personal Rapid Transit: Imagination in Search of a Market 335
 - 23.9 Reinventing Fixed Route Transit 337
 - 23.9.1 Retrenchment 337
 - 23.9.2 Subsidizing the Traveler not the System 338
 - 23.9.3 Contracting Out 339
 - 23.9.4 The Product 339
 - 23.10 Discussion 341
- 24. *Lord Kelvin's Curse* 343
 - 24.1 The Limits of Knowledge 343
 - 24.2 Policy Wants to Control 345
 - 24.2.1 Law of Inertia 345
 - 24.2.2 Second Law of Thermodynamics 345
 - 24.2.3 We Can Think Better 347
 - 24.3 Forecasting Travel 347
 - 24.3.1 UTPS Emerges 348
 - 24.3.2 CATS as Forecasting Paradigm 349
 - 24.3.3 Evaluation Paradigm 351
 - 24.3.4 Diffusion of CATS 352
 - 24.4 UTPS and Its Discontents 353
 - 24.4.1 The UTPS is biased in favor of the Interstate and scale economies 354
 - 24.4.2 The UTPS doesn't model much of human activity 355
 - 24.4.3 The flaws of UTPS are myriad 355
 - 24.4.4 UTPS inadequately addresses induced demand and induced development 356
 - 24.4.5 Where you stand depends on where you sit 357
 - 24.4.6 UTPS is not designed to address system management 357
 - 24.4.7 Critiques of models veil critiques of policy 358
 - 24.4.8 Strategic misrepresentation and optimism bias pervade forecasting 359
 - 24.5 Traveler Behaviors 360
 - 24.5.1 Time Use 360
 - 24.5.2 Profile: Yacov Zahavi 362
 - 24.5.3 Temporal and Spatial Agglomeration 363
 - 24.6 Futures 364

- 24.6.1 Forecasting the Future of Forecasting 364
- 24.6.2 Forecasting the Future of Behavior: Peak Travel 365
- 24.6.3 Telecommunications and Transportation:
Complements or Substitutes 366
- 24.7 Discussion: From UTPS to Inquiring Design 367

PART EIGHT | LIFE-CYCLE DYNAMICS

- 25. *The Life-Cycle of Transportation Systems* 371
 - 25.1 A Metaphor 371
 - 25.2 Temporal Dynamics 372
 - 25.3 S-Curve Math 374
 - 25.4 Spatial Dynamics 375
 - 25.5 Infrastructure and Economic Development: Macro-economics
versus Life-cycle Economics 377
 - 25.6 The Idea Queue 382
 - 25.7 Social Impacts 383
 - 25.8 The Value of Being at the Center of the World 384
 - 25.9 Specialization 385
- 26. *Meta-cycles* 386
 - 26.1 The Logic of Capital 386
 - 26.2 Waves Short and Long 387
 - 26.3 Emergence of a New Paradigm 388
 - 26.4 Status of Production 390
 - 26.5 Companion Innovation 392
 - 26.6 Thrusts for World Power 394
 - 26.7 Transportation and Economic Development 396
 - 26.8 Discussion 399

PART NINE | WAVE FIVE: MODERN TIMES

- 27. *Energy and Environment* 403
 - 27.1 Man and Nature 403
 - 27.2 Energy 404
 - 27.2.1 Running Out 404
 - 27.2.2 Is Transportation Obese? 406
 - 27.2.3 Energy Use 408
 - 27.3 Environment 412
 - 27.3.1 Is Transportation Sustainable? 412
 - 27.3.2 Climate Change 413
 - 27.3.3 Air Pollution 414
 - 27.4 The Automobile Vilified 416
 - 27.4.1 A Tax on Sin? 416
 - 27.4.2 The Automobile as Drug 416
 - 27.5 Responses 417
 - 27.5.1 Very Small Cars 417

- 27.5.2 EV redux 419
- 27.5.3 Implications of EVs on Financing 421
- 27.5.4 Scrappage Schemes 422
- 27.6 Discussion 423

- 28. *Higher Speed Rail: Hubs and Spokes* 424
 - 28.1 A Magic Bullet? 424
 - 28.2 Reinvention by Redesign 425
 - 28.3 Prelude to Reinvention 426
 - 28.4 Conception of Reinvention 427
 - 28.5 Hubs and Spokes 429
 - 28.6 Economic Effects of High-speed Rail Systems 432
 - 28.7 Nuisance Effects of Proposed High-speed Rail Lines 433
 - 28.8 Reinvention by Restructuring 433
 - 28.9 Discussion 435

- 29. *Internet* 438
 - 29.1 Routing Around 438
 - 29.2 Network Neutrality 440
 - 29.3 Common Carriage 441
 - 29.4 Price Discrimination 442
 - 29.5 Enclosure, Exclusion, and Rivalry 443
 - 29.6 Transaction Costs 445
 - 29.7 Learning—Over-engineering—Prioritization 446
 - 29.8 Discussion 446

- 30. *Technology: Hard and Soft* 451
 - 30.1 Metering Motorway 451
 - 30.2 Magic Motorways 454
 - 30.3 Automated Highways: The Clash between Technology and Deployment 457
 - 30.4 Intelligent Vehicles: The Rise of the Robots 458
 - 30.5 Planning Technology 461
 - 30.6 Standards and Orthostandards 461
 - 30.7 Standards as Economic Decisions 463
 - 30.8 Discussion 464

- PART TEN | BEYOND THE LIFE-CYCLE
- 31. *Policy and Its Lacunas* 467
 - 31.1 The Experiential Policy Model 467
 - 31.2 Policy Models 468
 - 31.3 The Subjects of Policy 469
 - 31.3.1 1978 National Transportation Policy Study Commission 469
 - 31.3.2 2008 National Surface Transportation Policy and Revenue Study Commission 471

- 31.4 Interaction with the Transportation Experience 471
- 31.5 Doing Better 472
- 31.6 Beyond the Supreme Good 473
- 31.7 Discussion: Application of Policy to Highways 474

32. *Speculations* 477

- 32.1 Capstone 477
- 32.2 Policy Debates Matter 478
- 32.3 Pick Consequential Battles 478
- 32.4 Conventional Wisdom versus Consequential Action 480
- 32.5 Interest Groups Are Socially Constructed (Where You Stand Depends on Where You Sit) 481
- 32.6 No Decision is “Truth” (Many Roads Lead to Rome) 482
- 32.7 Linear Reasoning Yields Conventional Wisdom 482
- 32.8 Policy and Design Would Be Improved by Bridging the Soft and Hard 483
- 32.9 Ideas Are Light Baggage 484
- 32.10 Transportation Provides a Mother Logic for Society 485
- 32.11 Transportation Regulatory Agencies Provided a Mother Logic for Regulatory Government 486
- 32.12 Transportation Opportunities Enable Innovation in the Economy 487
- 32.13 Transportation Is Bound by a Social Contract 487
- 32.14 The Life-cycle Dynamic of Systems Strains Social Contracts 488
- 32.15 Transportation Tomorrow Will Resemble Today 490
- 32.16 All Nations Are Both Developed and Undeveloped Concerning Transportation 491
- 32.17 Policy Should Create Environments for Innovators to Improve Service 493

PART ELEVEN | AFTERWORDS: REFLECTIONS ON TRANSPORTATION EXPERIENCES

33. *The Fall and Rise of the I-35W Mississippi River Bridge* 497

- 33.1 Introduction 498
- 33.2 Structure 499
- 33.3 Communication 501
- 33.4 Politics 504
- 33.5 Economic Effects 506
- 33.6 Traffic 507
- 33.7 New Bridge 508
- 33.8 Policy Implications 509

34. *The Transportation Professional and Transportation Policy (The Design of a Life)* 512

- 34.1 The Sorry Reality 512
- 34.2 But to Improve It 513
- 34.3 Design of a Life 515

35. <i>Commencement</i>	517
35.1	Introduction 517
35.2	Quest 518
35.3	Structure 519
35.4	Performance 521
35.5	Conduct 522
35.6	Imagination 524

PART TWELVE | END MATTER

Appendix 527

NOTES 529
