|------------------------------------|------|
| Preface to the Second Edition..... | xiii |
| Preface to the First Edition.....  | xv   |
| Authors .....                      | xvii |

|                                                                                    |           |
|------------------------------------------------------------------------------------|-----------|
| <b>1. Fundamentals .....</b>                                                       | <b>1</b>  |
| 1.1 Need for Turbine Blade Cooling .....                                           | 1         |
| 1.1.1 Recent Development in Aircraft Engines.....                                  | 1         |
| 1.1.2 Recent Development in Land-Based Gas Turbines.....                           | 3         |
| 1.2 Turbine-Cooling Technology .....                                               | 5         |
| 1.2.1 Concept of Turbine Blade Cooling .....                                       | 5         |
| 1.2.2 Typical Turbine-Cooling System .....                                         | 7         |
| 1.3 Turbine Heat Transfer and Cooling Issues.....                                  | 14        |
| 1.3.1 Turbine Blade Heat Transfer.....                                             | 14        |
| 1.3.2 Turbine Blade Internal Cooling .....                                         | 18        |
| 1.3.3 Turbine Blade Film Cooling .....                                             | 21        |
| 1.3.4 Thermal Barrier Coating and Heat Transfer.....                               | 21        |
| 1.4 Structure of the Book.....                                                     | 22        |
| 1.5 Review Articles and Book Chapters on Turbine Cooling<br>and Heat Transfer..... | 23        |
| 1.6 New Information from 2000 to 2010.....                                         | 24        |
| 1.6.1 ASME Turbo Expo Conference CDs .....                                         | 25        |
| 1.6.2 Book Chapters and Review Articles .....                                      | 25        |
| 1.6.3 Structure of the Revised Book .....                                          | 26        |
| References .....                                                                   | 26        |
| <b>2. Turbine Heat Transfer.....</b>                                               | <b>31</b> |
| 2.1 Introduction .....                                                             | 31        |
| 2.1.1 Combustor Outlet Velocity and Temperature Profiles .....                     | 31        |
| 2.2 Turbine-Stage Heat Transfer.....                                               | 35        |
| 2.2.1 Introduction.....                                                            | 35        |
| 2.2.2 Real Engine Turbine Stage.....                                               | 35        |
| 2.2.3 Simulated Turbine Stage .....                                                | 43        |
| 2.2.4 Time-Resolved Heat-Transfer Measurements<br>on a Rotor Blade .....           | 49        |
| 2.3 Cascade Vane Heat-Transfer Experiments .....                                   | 52        |
| 2.3.1 Introduction.....                                                            | 52        |
| 2.3.2 Effect of Exit Mach Number and Reynolds Number .....                         | 53        |
| 2.3.3 Effect of Free-Stream Turbulence .....                                       | 57        |

|         |                                                                       |     |
|---------|-----------------------------------------------------------------------|-----|
| 2.3.4   | Effect of Surface Roughness .....                                     | 58  |
| 2.3.5   | Annular Cascade Vane Heat Transfer .....                              | 62  |
| 2.4     | Cascade Blade Heat Transfer .....                                     | 66  |
| 2.4.1   | Introduction.....                                                     | 66  |
| 2.4.2   | Unsteady Wake-Simulation Experiments .....                            | 67  |
| 2.4.3   | Wake-Affected Heat-Transfer Predictions.....                          | 74  |
| 2.4.4   | Combined Effects of Unsteady Wake and<br>Free-Stream Turbulence ..... | 78  |
| 2.5     | Airfoil Endwall Heat Transfer.....                                    | 83  |
| 2.5.1   | Introduction.....                                                     | 83  |
| 2.5.2   | Description of the Flow Field.....                                    | 83  |
| 2.5.3   | Endwall Heat Transfer .....                                           | 86  |
| 2.5.4   | Near-Endwall Heat Transfer .....                                      | 88  |
| 2.5.5   | Engine Condition Experiments .....                                    | 90  |
| 2.5.6   | Effect of Surface Roughness .....                                     | 92  |
| 2.6     | Turbine Rotor Blade Tip Heat Transfer .....                           | 94  |
| 2.6.1   | Introduction.....                                                     | 94  |
| 2.6.2   | Blade Tip Region Flow Field and Heat Transfer.....                    | 95  |
| 2.6.3   | Flat-Blade Tip Heat Transfer.....                                     | 98  |
| 2.6.4   | Squealer- or Grooved-Blade-Tip Heat Transfer .....                    | 99  |
| 2.7     | Leading-Edge Region Heat Transfer .....                               | 106 |
| 2.7.1   | Introduction.....                                                     | 106 |
| 2.7.2   | Effect of Free-Stream Turbulence .....                                | 108 |
| 2.7.3   | Effect of Leading-Edge Shape .....                                    | 113 |
| 2.7.4   | Effect of Unsteady Wake.....                                          | 114 |
| 2.8     | Flat-Surface Heat Transfer .....                                      | 118 |
| 2.8.1   | Introduction.....                                                     | 118 |
| 2.8.2   | Effect of Free-Stream Turbulence .....                                | 118 |
| 2.8.3   | Effect of Pressure Gradient.....                                      | 123 |
| 2.8.4   | Effect of Streamwise Curvature.....                                   | 124 |
| 2.8.5   | Surface Roughness Effects.....                                        | 126 |
| 2.9     | New Information from 2000 to 2010.....                                | 128 |
| 2.9.1   | Endwall Heat Transfer .....                                           | 128 |
| 2.9.1.1 | Endwall Contouring .....                                              | 128 |
| 2.9.1.2 | Leading-Edge Modifications to Reduce<br>Secondary Flows.....          | 130 |
| 2.9.1.3 | Endwall Heat-Transfer Measurements.....                               | 131 |
| 2.9.2   | Turbine Tip and Casing Heat Transfer .....                            | 132 |
| 2.9.3   | Vane-Blade Interactions .....                                         | 136 |
| 2.9.3.1 | Cascade Studies.....                                                  | 137 |
| 2.9.4   | Deposition and Roughness Effects.....                                 | 138 |
| 2.9.5   | Combustor-Turbine Effects .....                                       | 139 |
| 2.9.6   | Transition-Induced Effects and Modeling .....                         | 141 |
| 2.10    | Closure.....                                                          | 143 |
|         | References .....                                                      | 144 |

|                                                                             |     |
|-----------------------------------------------------------------------------|-----|
| <b>3. Turbine Film Cooling</b> .....                                        | 159 |
| 3.1 Introduction .....                                                      | 159 |
| 3.1.1 Fundamentals of Film Cooling .....                                    | 159 |
| 3.2 Film Cooling on Rotating Turbine Blades .....                           | 162 |
| 3.3 Film Cooling on Cascade Vane Simulations .....                          | 169 |
| 3.3.1 Introduction .....                                                    | 169 |
| 3.3.2 Effect of Film Cooling .....                                          | 171 |
| 3.3.3 Effect of Free-Stream Turbulence .....                                | 180 |
| 3.4 Film Cooling on Cascade Blade Simulations .....                         | 181 |
| 3.4.1 Introduction .....                                                    | 181 |
| 3.4.2 Effect of Film Cooling .....                                          | 182 |
| 3.4.3 Effect of Free-Stream Turbulence .....                                | 185 |
| 3.4.4 Effect of Unsteady Wake .....                                         | 186 |
| 3.4.5 Combined Effect of Free-Stream Turbulence<br>and Unsteady Wakes ..... | 193 |
| 3.5 Film Cooling on Airfoil Endwalls .....                                  | 193 |
| 3.5.1 Introduction .....                                                    | 193 |
| 3.5.2 Low-Speed Simulation Experiments .....                                | 193 |
| 3.5.3 Engine Condition Experiments .....                                    | 200 |
| 3.5.4 Near-Endwall Film Cooling .....                                       | 201 |
| 3.6 Turbine Blade Tip Film Cooling .....                                    | 204 |
| 3.6.1 Introduction .....                                                    | 204 |
| 3.6.2 Heat-Transfer Coefficient .....                                       | 205 |
| 3.6.3 Film Effectiveness .....                                              | 208 |
| 3.7 Leading-Edge Region Film Cooling .....                                  | 210 |
| 3.7.1 Introduction .....                                                    | 210 |
| 3.7.2 Effect of Coolant-to-Mainstream Blowing Ratio .....                   | 211 |
| 3.7.3 Effect of Free-Stream Turbulence .....                                | 213 |
| 3.7.4 Effect of Unsteady Wake .....                                         | 218 |
| 3.7.5 Effect of Coolant-to-Mainstream Density Ratio .....                   | 218 |
| 3.7.6 Effect of Film Hole Geometry .....                                    | 224 |
| 3.7.7 Effect of Leading-Edge Shape .....                                    | 225 |
| 3.8 Flat-Surface Film Cooling .....                                         | 226 |
| 3.8.1 Introduction .....                                                    | 226 |
| 3.8.2 Film-Cooled, Heat-Transfer Coefficient .....                          | 227 |
| 3.8.2.1 Effect of Blowing Ratio .....                                       | 228 |
| 3.8.2.2 Effect of Coolant-to-Mainstream Density<br>Ratio .....              | 229 |
| 3.8.2.3 Effect of Mainstream Acceleration .....                             | 231 |
| 3.8.2.4 Effect of Hole Geometry .....                                       | 233 |
| 3.8.3 Film-Cooling Effectiveness .....                                      | 239 |
| 3.8.3.1 Effect of Blowing Ratio .....                                       | 241 |
| 3.8.3.2 Effect of Coolant-to-Mainstream Density<br>Ratio .....              | 242 |
| 3.8.3.3 Film Effectiveness Correlations .....                               | 244 |

|           |                                                                     |            |
|-----------|---------------------------------------------------------------------|------------|
| 3.8.3.4   | Effect of Streamwise Curvature and Pressure Gradient.....           | 250        |
| 3.8.3.5   | Effect of High Free-Stream Turbulence.....                          | 255        |
| 3.8.3.6   | Effect of Film Hole Geometry.....                                   | 257        |
| 3.8.3.7   | Effect of Coolant Supply Geometry.....                              | 260        |
| 3.8.3.8   | Effect of Surface Roughness .....                                   | 262        |
| 3.8.3.9   | Effect of Gap Leakage.....                                          | 262        |
| 3.8.3.10  | Effect of Bulk Flow Pulsations .....                                | 267        |
| 3.8.3.11  | Full-Coverage Film Cooling .....                                    | 267        |
| 3.9       | Discharge Coefficients of Turbine Cooling Holes.....                | 269        |
| 3.10      | Film-Cooling Effects on Aerodynamic Losses .....                    | 272        |
