CHAPTER 1 Introduction to the Equations of Fluid Dynamics and the Finite Element Approximation..... 1

1.1 General remarks and classification of fluid dynamics problems discussed in this book	1
1.2 The governing equations of fluid dynamics.....	5
1.2.1 Velocity, strain rates, and stresses in fluids.....	5
1.2.2 Constitutive relations for fluids	6
1.2.3 Mass conservation	7
1.2.4 Momentum conservation: Dynamic equilibrium.....	7
1.2.5 Energy conservation and equation of state	8
1.2.6 Boundary conditions.....	10
1.2.7 Navier-Stokes and Euler equations.....	10
1.3 Inviscid, incompressible flow	12
1.3.1 Velocity potential solution.....	12
1.4 Incompressible (or nearly incompressible) flows	14
1.5 Numerical solutions: Weak forms, weighted residual, and finite element approximation	15
1.5.1 Strong and weak forms.....	15
1.5.2 Weighted residual approximation	17
1.5.3 The Galerkin finite element method	18
1.5.4 A finite volume approximation.....	25
1.6 Concluding remarks.....	28
References.....	28

CHAPTER 2 Convection-Dominated Problems: Finite Element Approximations to the Convection-Diffusion-Reaction Equation 31

2.1 Introduction.....	31
2.2 The steady-state problem in one dimension	34
2.2.1 General remarks.....	34
2.2.2 Petrov-Galerkin methods for upwinding in one dimension	39
2.2.3 Balancing diffusion in one dimension.....	43
2.2.4 A variational principle in one dimension	43

2.2.5	Galerkin least-squares approximation (GLS) in one dimension	45
2.2.6	Subgrid scale (SGS) approximation	46
2.2.7	The finite increment calculus (FIC) for stabilizing the convective-diffusion equation in one dimension	47
2.2.8	Higher-order approximations	48
2.3	The steady-state problem in two (or three) dimensions.....	49
2.3.1	General remarks.....	49
2.3.2	Streamline (upwind) Petrov-Galerkin weighting (SUPG)	49
2.3.3	Galerkin least squares (GLS) and finite increment calculus (FIC) in multidimensional problems	53
2.4	Steady state: Concluding remarks	54
2.5	Transients: Introductory remarks.....	54
2.5.1	Mathematical background	54
2.5.2	Possible discretization procedures.....	55
2.6	Characteristic-based methods	57
2.6.1	Mesh updating and interpolation methods	57
2.6.2	Characteristic-Galerkin procedures	58
2.6.3	A simple explicit characteristic-Galerkin procedure.....	60
2.6.4	Boundary conditions: Radiation	66
2.7	Taylor-Galerkin procedures for scalar variables.....	70
2.8	Steady-state condition.....	71
2.9	Nonlinear waves and shocks.....	71
2.10	Treatment of pure convection	76
2.11	Boundary conditions for convection-diffusion	78
2.12	Summary and concluding remarks	79
	References.....	80

CHAPTER 3 The Characteristic-Based Split (CBS) Algorithm: A General Procedure for Compressible and Incompressible Flow..... 87

3.1	Introduction.....	87
3.2	Nondimensional form of the governing equations	89
3.3	Characteristic-based split (CBS) algorithm.....	90
3.3.1	The split: General remarks	90
3.3.2	The split: Temporal discretization	91
3.3.3	Spatial discretization and solution procedure.....	94
3.3.4	Mass diagonalization (lumping).....	99
3.4	Explicit, semi-implicit, and nearly implicit forms.....	100
3.4.1	Fully explicit form.....	100

3.4.2	Semi-implicit form	100
3.4.3	Quasi- (nearly) implicit form.....	101
3.4.4	Evaluation of time step limits: Local and global time steps	101
3.5	Artificial compressibility and dual time stepping	103
3.5.1	Artificial compressibility for steady-state problems.....	103
3.5.2	Artificial compressibility in transient problems (dual time stepping).....	104
3.6	“Circumvention” of the Babuška-Brezzi (BB) restrictions	106
3.7	A single-step version	107
3.8	Splitting error.....	109
3.8.1	Elimination of first-order pressure error.....	110
3.9	Boundary conditions	110
3.9.1	Fictitious boundaries	110
3.9.2	Real boundaries	112
3.9.3	Application of real boundary conditions in the discretization using the CBS algorithm.....	112
3.10	The performance of two- and single-step algorithms on an inviscid problem.....	114
3.11	Performance of dual time stepping to remove pressure error.....	116
3.12	Concluding remarks.....	118
	References.....	118

CHAPTER 4 Incompressible Newtonian Laminar Flows..... 127

4.1	Introduction and the basic equations	127
4.2	Use of the CBS algorithm for incompressible flows	129
4.2.1	The fully explicit artificial compressibility form.....	129
4.2.2	The semi-implicit form.....	129
4.2.3	Quasi-implicit solution	139
4.3	Adaptive mesh refinement	140
4.3.1	Second gradient (curvature) based refinement	143
4.3.2	Local patch interpolation: Superconvergent values.....	145
4.3.3	Estimation of second derivatives at nodes	146
4.3.4	Element elongation.....	146
4.3.5	First derivative (gradient) based refinement	148
4.3.6	Choice of variables	149
4.3.7	An example.....	149
4.4	Adaptive mesh generation for transient problems	149
4.5	Slow flows: Mixed and penalty formulations	151
4.5.1	Analogy with incompressible elasticity.....	151
4.5.2	Mixed and penalty discretization.....	151

4.6	Concluding remarks.....	153
	References.....	155
CHAPTER 5	Incompressible Non-Newtonian Flows	163
5.1	Introduction.....	163
5.2	Non-Newtonian flows: Metal and polymer forming.....	163
5.2.1	Non-Newtonian flows including viscoplasticity and plasticity.....	163
5.2.2	Steady-state problems of forming	166
5.2.3	Transient problems with changing boundaries.....	169
5.2.4	Elastic springback and viscoelastic fluids	174
5.3	Viscoelastic flows	177
5.3.1	Governing equations.....	179
5.4	Direct displacement approach to transient metal forming.....	185
5.5	Concluding remarks.....	187
	References.....	188
CHAPTER 6	Free Surface and Buoyancy Driven Flows.....	195
6.1	Introduction.....	195
6.2	Free surface flows	195
6.2.1	General remarks.....	195
6.2.2	Lagrangian method.....	197
6.2.3	Eulerian methods	200
6.2.4	Arbitrary Lagrangian-Eulerian (ALE) method.....	210
6.3	Buoyancy driven flows.....	215
6.4	Concluding remarks.....	218
	References.....	219
CHAPTER 7	Compressible High-Speed Gas Flow.....	225
7.1	Introduction.....	225
7.2	The governing equations.....	226
7.3	Boundary conditions: Subsonic and supersonic flow	227
7.3.1	Euler equation.....	228
7.3.2	Navier-Stokes equations	229
7.4	Numerical approximations and the CBS algorithm.....	230
7.5	Shock capture.....	231
7.5.1	Second derivative-based methods	232
7.5.2	Residual-based methods	233
7.6	Variable smoothing	234

7.7	Some preliminary examples for the Euler equation.....	234
7.8	Adaptive refinement and shock capture in Euler problems	238
7.8.1	General	238
7.8.2	The h -refinement process and mesh enrichment	243
7.8.3	h -refinement and remeshing in steady-state two-dimensional problems	245
7.9	Three-dimensional inviscid examples in steady state.....	246
7.9.1	Solution of the flow pattern around a complete aircraft.....	253
7.9.2	THRUST: The supersonic car.....	255
7.10	Transient two- and three-dimensional problems.....	256
7.11	Viscous problems in two dimensions.....	260
7.11.1	Adaptive refinement in both shock and boundary layer	262
7.11.2	Special adaptive refinement for boundary layers and shocks	264
7.12	Three-dimensional viscous problems	271
7.13	Boundary layer: Inviscid Euler solution coupling	271
7.14	Concluding remarks.....	273
	References.....	274

CHAPTER 8 Turbulent Flows..... 283

8.1	Introduction.....	283
8.1.1	Time averaging	284
8.1.2	Relation between κ , ε , and ν_T	286
8.2	Treatment of incompressible turbulent flows.....	286
8.2.1	Reynolds-averaged Navier-Stokes.....	286
8.2.2	One-equation models.....	287
8.2.3	Two-equation models.....	288
8.2.4	Nondimensional form of the governing equations	289
8.2.5	Shortest distance to a solid wall	291
8.2.6	Solution procedure for turbulent flow equations	292
8.3	Treatment of compressible flows	298
8.3.1	Mass-weighted (Favre) time averaging	300
8.4	Large eddy simulation (LES).....	303
8.5	Detached eddy simulation (DES) and monotonically integrated LES (MILES).....	305
8.6	Direct numerical simulation (DNS).....	306
8.7	Concluding remarks.....	306
	References.....	306

CHAPTER 9 Generalized Flow and Heat Transfer in Porous Media.....	309
9.1 Introduction.....	309
9.2 A generalized porous medium flow approach	310
9.2.1 Nondimensional scales	313
9.3 Discretization procedure.....	315
9.3.1 Semi- and quasi-implicit forms	315
9.4 Forced convection.....	316
9.5 Natural convection.....	318
9.5.1 Constant-porosity medium	319
9.6 Concluding remarks.....	323
References.....	324
CHAPTER 10 Shallow-Water Problems	327
10.1 Introduction.....	327
10.2 The basis of the shallow-water equations	328
10.3 Numerical approximation	332
10.4 Examples of application	334
10.4.1 Transient one-dimensional problems: A performance assessment	334
10.4.2 Two-dimensional periodic tidal motions	334
10.4.3 Tsunami waves	339
10.4.4 Steady-state solutions	343
10.5 Drying areas.....	346
10.6 Shallow-water transport.....	346
10.7 Concluding remarks.....	349
References.....	349
CHAPTER 11 Long and Medium Waves	355
11.1 Introduction and equations	355
11.2 Waves in closed domains: Finite element models	356
11.3 Difficulties in modeling surface waves.....	358
11.4 Bed friction and other effects.....	358
11.5 The short-wave problem	359
11.6 Waves in unbounded domains (exterior surface wave problems).....	359
11.6.1 Background to wave problems	359
11.6.2 Wave diffraction	360
11.6.3 Incident waves, domain integrals, and nodal values.....	362
11.7 Unbounded problems.....	362

- 11.8** Local nonreflecting boundary conditions (NRBCs) 363
 - 11.8.1 Sponge layers or perfectly matched layers (PMLs) 365
- 11.9** Infinite elements..... 366
 - 11.9.1 Mapped periodic (unconjugated) infinite elements 366
 - 11.9.2 Ellipsoidal type infinite elements of
Burnett and Holford..... 368
 - 11.9.3 Wave envelope (or conjugated) infinite elements 369
 - 11.9.4 Accuracy of infinite elements 371
 - 11.9.5 Other applications..... 371
 - 11.9.6 Trefftz-type infinite elements..... 372
- 11.10** Convection and wave refraction..... 372
- 11.11** Transient problems 374
- 11.12** Linking to exterior solutions (or DtN mapping)..... 375
 - 11.12.1 Linking to boundary integrals..... 376
 - 11.12.2 Linking to series solutions..... 376
- 11.13** Three-dimensional effects in surface waves 377
 - 11.13.1 Large-amplitude water waves 379
 - 11.13.2 Cnoidal and solitary waves..... 381
 - 11.13.3 Stokes waves..... 381
- 11.14** Concluding remarks..... 383
- References..... 383

CHAPTER 12 Short Waves 389

- 12.1** Introduction..... 389
- 12.2** Background..... 389
- 12.3** Errors in wave modeling..... 391
- 12.4** Recent developments in short-wave modeling 391
- 12.5** Transient solution of electromagnetic scattering problems 392
- 12.6** Finite elements incorporating wave shapes 392
 - 12.6.1 Shape functions using products of polynomials
and waves..... 394
 - 12.6.2 Shape functions using sums of polynomials
and waves..... 397
 - 12.6.3 The discontinuous enrichment method..... 398
 - 12.6.4 Ultra weak formulation..... 399
 - 12.6.5 Trefftz-type finite elements for waves 401
- 12.7** Refraction 404
 - 12.7.1 Wave speed refraction..... 405
 - 12.7.2 Refraction caused by flows..... 410
- 12.8** Spectral finite elements for waves 412

12.9	Discontinuous Galerkin finite elements (DGFE).....	414
12.10	Concluding remarks.....	415
	References.....	417
CHAPTER 13 Fluid–Structure Interaction		423
13.1	Introduction.....	423
13.2	One-dimensional fluid–structure interaction	424
13.2.1	Equations	424
13.2.2	Characteristic analysis	427
13.2.3	Boundary conditions.....	429
13.2.4	Solution method: Taylor-Galerkin method.....	430
13.2.5	Some results.....	433
13.3	Multidimensional problems	435
13.3.1	Equations and discretization.....	435
13.3.2	Segregated approach.....	440
13.3.3	Mesh moving procedures.....	441
13.4	Concluding remarks.....	446
	References.....	446
CHAPTER 14 Biofluid Dynamics.....		451
14.1	Introduction.....	451
14.2	Flow in human arterial system.....	451
14.2.1	Heart	452
14.2.2	Reflections	458
14.2.3	Aortic valve	458
14.2.4	Vessel branching	460
14.2.5	Terminal vessels	462
14.2.6	Numerical solution	464
14.3	Image-based subject-specific flow modeling.....	470
14.3.1	Image segmentation.....	471
14.3.2	Geometrical potential force (GPF)	471
14.3.3	Numerical solution, initial and boundary conditions	472
14.3.4	Domain discretization.....	472
14.3.5	Flow solution	473
14.4	Concluding remarks.....	479
	References.....	479
CHAPTER 15 Computer Implementation of the CBS Algorithm.....		485
15.1	Introduction.....	485
15.2	The data input module	486

15.2.1	Mesh data: Nodal coordinates and connectivity	486
15.2.2	Boundary data	486
15.2.3	Other necessary data and flags	487
15.2.4	Preliminary subroutines and checks	487
15.3	Solution module	487
15.3.1	Time step	488
15.3.2	Shock capture	488
15.3.3	CBS algorithm: Steps	489
15.3.4	Boundary conditions	489
15.3.5	Solution of simultaneous equations: Semi-implicit form	490
15.3.6	Different forms of energy equation	490
15.3.7	Convergence to steady state	490
15.4	Output module	490
	References	490
APPENDIX A Self-Adjoint Differential Equations		493
APPENDIX B Nonconservative Form of Navier-Stokes Equations		495
APPENDIX C Computing the Drag Force and Stream Function		497
APPENDIX D Convection-Diffusion Equations: Vector-Valued Variables		499
APPENDIX E Integration Formulae		509
APPENDIX F Edge-Based Finite Element Formulation		511
APPENDIX G Boundary Layer-Inviscid Flow Coupling		515
APPENDIX H Multigrid Method		519
