## ***PART I Photonic and Optoelectronics Sensors***

|                  |                                                                                                                                  |     |
|------------------|----------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 1</b> | Optical Fiber Sensors: Devices and Techniques .....                                                                              | 3   |
|                  | <i>Rogério Nunes Nogueira, Lúcia Maria Botas Bilro, Nélia Jordão Alberto, Hugo Filipe Teixeira Lima, and João de Lemos Pinto</i> |     |
| <b>Chapter 2</b> | Microstructured and Solid Polymer Optical Fiber Sensors .....                                                                    | 17  |
|                  | <i>Christian-Alexander Bunge and Hans Poisel</i>                                                                                 |     |
| <b>Chapter 3</b> | Optical Fiber Sensors and Interrogation Systems for Interaction Force Measurements in Minimally Invasive Surgical Devices.....   | 31  |
|                  | <i>Ginu Rajan, Dean Callaghan, Yuliya Semenova, and Gerald Farrell</i>                                                           |     |
| <b>Chapter 4</b> | Recent Advances in Distributed Fiber-Optic Sensors Based on the Brillouin Scattering Effect.....                                 | 47  |
|                  | <i>Alayn Loayssa, Mikel Sagues, and Ander Zornoza</i>                                                                            |     |
| <b>Chapter 5</b> | Silicon Microring Sensors.....                                                                                                   | 65  |
|                  | <i>Zhiping Zhou and Huaxiang Yi</i>                                                                                              |     |
| <b>Chapter 6</b> | Laser Doppler Velocimetry Technology for Integration and Directional Discrimination.....                                         | 81  |
|                  | <i>Koichi Maru and Yusaku Fujii</i>                                                                                              |     |
| <b>Chapter 7</b> | Vision-Aided Automated Vibrometry for Remote Audio–Visual Range Sensing.....                                                     | 97  |
|                  | <i>Tao Wang and Zhigang Zhu</i>                                                                                                  |     |
| <b>Chapter 8</b> | Analytical Use of Easily Accessible Optoelectronic Devices: Colorimetric Approaches Focused on Oxygen Quantification .....       | 113 |
|                  | <i>Jinseok Heo and Chang-Soo Kim</i>                                                                                             |     |

|                  |                                                                |     |
|------------------|----------------------------------------------------------------|-----|
| <b>Chapter 9</b> | Optical Oxygen Sensors for Micro- and Nanofluidic Devices..... | 129 |
|                  | <i>Volker Nock, Richard J. Blaikie, and Maan M. Alkaisi</i>    |     |

|                   |                                                                         |     |
|-------------------|-------------------------------------------------------------------------|-----|
| <b>Chapter 10</b> | Multidirectional Optical Sensing Using Differential Triangulation ..... | 155 |
|                   | <i>Xian Jin and Jonathan F. Holzman</i>                                 |     |

## ***PART II Infrared and Thermal Sensors***

|                   |                                                                                                                                  |     |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 11</b> | Measurement of Temperature Distribution in Multilayer Insulations between<br>77 and 300 K Using Fiber Bragg Grating Sensor ..... | 179 |
|                   | <i>Rajini Kumar Ramalingam and Holger Neumann</i>                                                                                |     |

|                   |                                                 |     |
|-------------------|-------------------------------------------------|-----|
| <b>Chapter 12</b> | Thin Film Resistance Temperature Detectors..... | 195 |
|                   | <i>Fred Lacy</i>                                |     |

|                   |                                                                                                       |     |
|-------------------|-------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 13</b> | The Influence of Selected Parameters on Temperature Measurements Using<br>a Thermovision Camera ..... | 207 |
|                   | <i>Mariusz Litwa</i>                                                                                  |     |

|                   |                                                            |     |
|-------------------|------------------------------------------------------------|-----|
| <b>Chapter 14</b> | Adaptive Sensors for Dynamic Temperature Measurements..... | 227 |
|                   | <i>Paweł Jamróz and Jerzy Nabielec</i>                     |     |

|                   |                                                       |     |
|-------------------|-------------------------------------------------------|-----|
| <b>Chapter 15</b> | Dual-Band Uncooled Infrared Microbolometer.....       | 243 |
|                   | <i>Qi Cheng, Mahmoud Almasri, and Suzanne Paradis</i> |     |

|                   |                                              |     |
|-------------------|----------------------------------------------|-----|
| <b>Chapter 16</b> | Sensing Temperature inside Explosions .....  | 257 |
|                   | <i>Joseph J. Talghader and Merlin L. Mah</i> |     |

## ***PART III Magnetic and Inductive Sensors***

|                   |                                                                      |     |
|-------------------|----------------------------------------------------------------------|-----|
| <b>Chapter 17</b> | Accurate Scanning of Magnetic Fields .....                           | 273 |
|                   | <i>Hendrik Husstedt, Udo Ausserlechner, and Manfred Kaltenbacher</i> |     |

|                   |                                              |     |
|-------------------|----------------------------------------------|-----|
| <b>Chapter 18</b> | Low-Frequency Search Coil Magnetometers..... | 289 |
|                   | <i>Asaf Grosz and Eugene Paperno</i>         |     |

|                   |                                                                                |     |
|-------------------|--------------------------------------------------------------------------------|-----|
| <b>Chapter 19</b> | Inductive Coupling–Based Wireless Sensors for High-Frequency Measurements..... | 305 |
|                   | <i>H.S. Kim, S. Sivaramakrishnan, A.S. Sezen, and R. Rajamani</i>              |     |

|                   |                                                                                    |     |
|-------------------|------------------------------------------------------------------------------------|-----|
| <b>Chapter 20</b> | Inductive Sensor for Lightning Current Measurement Fitted in Aircraft Windows .... | 323 |
|                   | <i>A.P.J. van Deursen</i>                                                          |     |
| <b>Chapter 21</b> | Technologies for Electric Current Sensors.....                                     | 339 |
|                   | <i>G. Velasco-Quesada, A. Conesa-Roca, and M. Román-Lumbreras</i>                  |     |
| <b>Chapter 22</b> | Ferrofluids and Their Use in Sensors.....                                          | 355 |
|                   | <i>B. Andò, S. Baglio, A. Beninato, and V. Marletta</i>                            |     |

## ***PART IV Sound and Ultrasound Sensors***

|                   |                                                                                                                     |     |
|-------------------|---------------------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 23</b> | Low-Cost Underwater Acoustic Modem for Short-Range Sensor Networks.....                                             | 371 |
|                   | <i>Bridget Benson and Ryan Kastner</i>                                                                              |     |
| <b>Chapter 24</b> | Integrating Ultrasonic Standing Wave Particle Manipulation into Vibrational Spectroscopy Sensing Applications ..... | 391 |
|                   | <i>Stefan Radel, Johannes Schnöller, and Bernhard Lendl</i>                                                         |     |
| <b>Chapter 25</b> | Wideband Ultrasonic Transmitter and Sensor Array for In-Air Applications.....                                       | 411 |
|                   | <i>Juan Ramon Gonzalez, Mohamed Saad, and Chris J. Bleakley</i>                                                     |     |
| <b>Chapter 26</b> | Sensing Applications Using Photoacoustic Spectroscopy.....                                                          | 433 |
|                   | <i>Ellen L. Holthoff and Paul M. Pellegrino</i>                                                                     |     |

## ***PART V Piezoresistive, Wireless, and Electrical Sensors***

|                   |                                                                                                                                     |     |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 27</b> | Piezoresistive Fibrous Sensor for On-Line Structural Health Monitoring of Composites .....                                          | 455 |
|                   | <i>Saad Nauman, Irina Cristian, François Boussu, and Vladan Koncar</i>                                                              |     |
| <b>Chapter 28</b> | Structural Health Monitoring Based on Piezoelectric Transducers: Analysis and Design Based on the Electromechanical Impedance ..... | 471 |
|                   | <i>Fabricio G. Baptista, Jozue Vieira Filho, and Daniel J. Inman</i>                                                                |     |
| <b>Chapter 29</b> | Microwave Sensors for Non-Invasive Monitoring of Industrial Processes.....                                                          | 485 |
|                   | <i>B. García-Baños, Jose M. Catalá-Civera, Antoni J. Canós, and Felipe L. Peñaranda-Foix</i>                                        |     |
| <b>Chapter 30</b> | Microwave Reflectometry for Sensing Applications in the Agrofood Industry.....                                                      | 501 |
|                   | <i>Andrea Cataldo, Egidio De Benedetto, and Giuseppe Cannazza</i>                                                                   |     |

|                    |                                                                     |     |
|--------------------|---------------------------------------------------------------------|-----|
| <b>Chapter 31</b>  | Wearable PTF Strain Sensors.....                                    | 517 |
|                    | <i>Sari Merilampi</i>                                               |     |
| <b>Chapter 32</b>  | Application of Inertial Sensors in Developing Smart Particles ..... | 533 |
|                    | <i>Ehad Akeila, Zoran Salcic, and Akshya Swain</i>                  |     |
| <b>Index</b> ..... |                                                                     | 553 |
