

Contents

1	Introduction	1
1.1	Mechanical Vibrations	1
1.2	Active Noise Control (ANC) vs. Active Structural– Acoustic Control (ASAC)	3
1.3	Radiation Mode vs. Volume Velocity	6
1.4	Active Control System	7
1.4.1	Sensor/Actuator	7
1.4.2	Controller	11
1.5	Distributed Control vs. Centralized Control	15
1.6	Semi-active Control	16
1.6.1	Adaptive Helmholtz Resonators	16
1.6.2	Adaptive Piezoelectric Shunt Damping	17
1.7	An Introduction of MATLAB and Simulink	20
1.7.1	Scripts	20
1.7.2	Functions	20
1.7.3	GUIDE	20
1.7.4	Simulink	21
1.7.5	Programs Used	21
1.8	Organization of the Book	22
	References	22
	Problems	25
2	Vibration and Sound Radiation	27
2.1	The Structural Modes for Beams	27
2.1.1	Basic Equations	27
2.1.2	MATLAB Examples	31
2.2	The Structural Modes for Plates	33
2.2.1	Basic Equations	33
2.2.2	MATLAB Examples for the Mode Shapes of Plates	37
2.2.3	Natural Frequencies of Plates	41

2.3	Sound Pressure, Power, and Radiation Efficiency	45
2.3.1	Far-Field Sound Pressure	45
2.3.2	Wave-Number Transform Solution	47
2.4	Sound Power and Radiation Efficiency	52
2.4.1	Basic Equations for Radiation Mode Theory	52
2.4.2	MATLAB Examples for Beam and Plate Structures	55
2.4.3	Radiation Efficiency in Terms of Radiation Modes	61
2.4.4	Radiation Efficiency in Terms of Structural Modes	62
2.4.5	MATLAB Examples for the Calculation of Radiation Efficiency	63
2.5	The GUI Design	67
2.5.1	Case 1	68
2.5.2	Case 2	72
	References	74
	Problems	75
3	Introduction Examples on Control of Sound and Vibration	77
3.1	The Wave Equation	77
3.2	Control of Downstream Wave Transmission	79
3.2.1	Single Control Source	79
3.2.2	Double Control Sources	80
3.2.3	The Influence of Reflections from the Primary Sources	83
3.2.4	Active Control of Sound Pressure in a Finite Duct	84
3.3	Active Control of Vibrating Structures	88
3.3.1	Linear Quadratic Optimal Control Theory	88
3.3.2	Minimization of the Sound Power	89
3.3.3	Cancellation Volume Velocity	90
3.3.4	Cancellation of the First k Radiation Modes	90
3.4	Active Control Sound Radiation from 1-D Structure (Beam)	91
3.5	Active Control Sound Radiation from 2-D Structure (Plate)	92
3.6	Active Control of Sound Transmission Through Double-Plate Structures	97
3.6.1	Minimization of the Signals of PVDF Sensors	105
3.6.2	Minimization of the Signals of Microphones in Cavity	105
3.6.3	Sound Transmission Loss	106
3.6.4	Numerical Results	107
	References	116
	Problems	117
4	Distributed Transducers by Using Smart Materials	119
4.1	State-Space Model	119
4.2	Collocated Sensor and Actuator	120
4.3	Piezoelectric Materials	126
4.4	Design of the Modal Sensors Using Shaped Piezoelectric Sensors ...	129
4.5	Design of the Volume Displacement Sensor	131

4.6	Design of a Total Volume Displacement Sensor Using Integration-by-Parts Approach	133
4.7	Design Modal Sensor Using PVDF Array	136
4.7.1	Modal Method	136
4.7.2	Pseudo-inverse Method	139
4.8	Wave-Filter Design	144
4.9	2-D Modal Sensors	150
4.9.1	Using Shaped PVDF Sensors	150
4.9.2	Using PVDF Array	156
	References	157
	Problems	158
5	Feedback Control	161
5.1	Linear Quadratic Regulator (LQR) Problem	161
5.2	The Linear Quadratic Gaussian (LQG) Problem	166
5.3	Modal Control	171
5.4	Stability Criterion (Input–Output Approach)	176
5.4.1	Root Locus Criterion	178
5.4.2	Frequency Response Method	180
5.5	Internal Model Control (IMC)	186
5.6	Robust Control	187
5.6.1	Performance Path and Control Path	188
5.6.2	Robust Control of a Vibrating Beam	190
5.6.3	Robust Control of Sound Radiation from a Vibrating Plate ..	200
	References	209
	Problems	210
6	Positive Position Feedback (PPF) Control	213
6.1	Conception of PPF Controller	213
6.1.1	Active Damping with Collocated Pairs (Velocity Feedback and Resonant Controller)	213
6.1.2	PPF Controllers (The Single Degree of Freedom Case)	215
6.2	Control of the Sound Pressure in Duct by Using a PPF Controller ..	219
6.2.1	Loudspeaker Model	220
6.2.2	Duct Model	223
6.2.3	Loudspeaker–Duct Coupling Model	227
6.2.4	The Influence of Loudspeaker Dynamics	231
6.3	PPF Controller and Phase-Compensation Design	233
6.4	Non-collocated Loudspeaker/Microphone Pair	244
6.5	Multimode Control	247
6.6	Sharing Data Between Simulink and the GUI	248
6.7	Analog Circuit Design and Experimental Setup	257
6.8	Experimental Results	258
	References	264
	Problems	264

7	Semi-active Control Using Adaptive Helmholtz Resonators	267
7.1	Basic Theory of the Helmholtz Resonator	267
7.2	Experimental Verification	269
7.3	Preliminary Study of Noise Control Using HRs	270
7.3.1	State-Space Method	270
7.3.2	Frequency-Domain Method	274
7.4	Double-Plate Structures with HRs	279
7.4.1	System Modelling	280
7.4.2	Calculation Results	285
7.5	Experimental Results for Double-Glazed Window with HRs	293
7.5.1	Experimental Setup	293
7.5.2	Bare Double-Glazed Window Responses	294
7.5.3	Measurements with White Noise Excitation	296
7.5.4	Near-Field Performance	298
7.5.5	Measurements with Real-World Noise	299
7.6	Adaptive HRs	301
7.7	Experimental Results of Adaptive HR	309
7.8	Other Type of Adaptive Acoustic Absorber (Passive Loudspeaker) ..	312
	Appendix: Higher-Order Natural Frequencies of HR	313
