List of Figures	xxi
List of Tables	xxxii
Foreword	xxxvii
Preface.....	xxxix
Acknowledgments	xli
Author.....	xliii
1. Biomass as Energy Source	1
1.1 Introduction	1
1.2 US Energy Use and Needs.....	3
1.3 Biomass Energy Usage and Overall Energy Needs in Other Countries.....	4
1.4 Future of Agriculture	5
1.5 Advantages and Disadvantages in Use of Biomass as Energy Source.....	7
1.5.1 Advantages	8
1.5.2 Disadvantages	8
1.6 Sources of Biomass Available for Energy Use.....	9
1.6.1 Crop Residues.....	9
1.6.2 Fuelwood.....	11
1.6.3 Aquatic Biomass.....	13
1.6.4 Sugar Crops	14
1.6.5 Oil Crops	16
1.6.6 Animal Manure.....	20
1.6.7 Municipal Solid Wastes.....	22
1.6.8 Energy Farming	25
1.6.8.1 Fast-Growing Trees.....	26
1.6.8.2 Sugar and Starchy Crops.....	28
1.6.8.3 Oil and Hydrocarbon Crops.....	29
1.6.8.4 Herbaceous Crops	30
1.6.8.5 Aquatic Plants.....	32
1.7 Units and Conversions	34
1.8 Conclusion.....	36
1.9 Problems and Discussion Issues.....	37
1.9.1 Simple Definitions	37
1.9.2 Energy Units.....	37
1.9.3 Net Energy Trends in United States.....	37
1.9.4 Contribution of Energy Sources in the US Economy.....	37
1.9.5 Moisture Removal in Biomass	37
1.9.6 Energy from Imported Crude Oil	38

1.9.7	Pure Sugar to Ethanol Conversion	38
1.9.8	Biogas Utilization in Households.....	38
1.9.9	Acreage Needed to Build Power Plants.....	38
1.9.10	Air-to-Fuel Ratios for the Combustion of Fuel.....	38
	References	39
	Further Readings.....	40
2.	Biomass Conversion Processes	43
2.1	Introduction	43
2.2	Overview of Biomass Conversion Processes.....	45
2.3	Chemical Conversion Processes	47
2.4	Biological Conversion Processes	49
2.4.1	Ethanol Fermentation.....	49
2.4.2	Biogas Production	51
2.5	Thermal Conversion Processes	53
2.5.1	Torrefaction.....	54
2.5.2	Pyrolysis.....	56
2.5.3	Gasification	59
2.5.4	Combustion.....	63
2.6	Hybrid Conversion Processes.....	65
2.6.1	Biological and Thermal Conversions	65
2.6.2	Thermal and Biological Conversions	67
2.7	Applications of Biomass Conversion Products.....	68
2.7.1	Heat Energy	68
2.7.2	Electrical Energy	69
2.7.3	Combined Heat and Power	70
2.7.4	Mechanical Energy	71
2.7.5	Liquid Biofuels or Bio-Oil Production	73
2.7.6	Synthesis Gas Production and Use.....	74
2.7.7	Biochar Production	75
2.8	Conclusion.....	76
2.9	Problems and Discussion Issues.....	77
2.9.1	Heat Energy Conversion Efficiency.....	77
2.9.2	Energy of Feedstock and Biofuel Product.....	77
2.9.3	Ethanol Yield per Unit of Area	77
2.9.4	Number of Animals Needed for Power Generation.....	77
2.9.5	Pyrolysis Conversion Efficiency	78
2.9.6	Gasification Carbon Efficiency.....	78
2.9.7	Area Required for a Power Plant.....	78
2.9.8	Energy Required to Raise Water Temperature.....	79
2.9.9	Biogas Conversion Efficiency	79
2.9.10	Steam Cycle Conversion Efficiency	79
	References	79
	Further Readings	80

3. Biomass Properties for Thermal Conversion	83
3.1 Introduction.....	83
3.2 Physical Properties of Biomass.....	85
3.2.1 Particle Density.....	85
3.2.2 Bulk Density.....	85
3.2.3 Particle Size and Particle Size Distribution.....	87
3.2.4 Angle of Repose.....	90
3.2.5 Angle of Friction.....	90
3.2.6 Heat Capacity and Thermal Conductivity of Biomass.....	90
3.3 Important Thermal Related Properties.....	91
3.3.1 Proximate Analysis.....	91
3.3.1.1 Moisture Content.....	93
3.3.1.2 Volatile Combustible Matter.....	94
3.3.1.3 Fixed Carbon and Ash.....	95
3.3.2 Ultimate Analysis.....	97
3.3.3 Heating Value Analysis.....	101
3.3.3.1 Heating Value by Carbon Basis.....	104
3.3.3.2 Heating Value by Ash Basis.....	104
3.3.3.3 Heating Value by Ash and VCM Basis.....	105
3.3.3.4 Boie Equation.....	106
3.3.3.5 Dulong Equation.....	107
3.3.3.6 Heat of Combustion.....	108
3.3.3.7 Stoichiometry of Reactions.....	108
3.3.3.8 Eutectic Point Analysis.....	109
3.4 Other Standard Methods for Biomass Analysis.....	112
3.5 Conclusion.....	114
3.6 Problems and Discussion Issues.....	115
3.6.1 Sustainability of Biomass Use.....	115
3.6.2 Proximate Analysis Calculations.....	115
3.6.3 Air-to-Fuel Ratio Calculations.....	115
3.6.4 Heating Value Equivalents.....	115
3.6.5 Biomass Requirements for Power Generation.....	116
3.6.6 Heating Value Calculations.....	116
3.6.7 Heating Value Calculations: Carbon Basis.....	116
3.6.8 Dulong and Boie Equations.....	116
3.6.9 Empirical Relations for Estimating Heating Values of Biomass.....	116
3.6.10 Slagging and Fouling Factors.....	116
References.....	117
Further Readings.....	117
 4. Biomass Properties for Biological Conversion	 119
4.1 Introduction.....	119
4.2 Properties of Biomass Important for Biological Conversion.....	121
4.3 Standard Methods for Analysis and Examples.....	125

4.3.1	Preparation of Samples for Compositional Analysis (LAP No. 42620).....	125
4.3.2	Determination of Percent Solids in Biomass.....	128
4.3.3	Determination of Extractives in Biomass.....	129
4.3.4	Percent Total Solids of Extractives-Free Biomass.....	131
4.3.5	Percent Protein of Extractives-Free, ODW Biomass.....	132
4.3.6	ODW of Extractives-Free Sample.....	133
4.3.7	Percent Acid-Insoluble Residue.....	134
4.3.8	Percent AIL (Extractives Free).....	136
4.3.9	Percent ASL (Extractives Free).....	138
4.3.10	Carbohydrates in Biomass.....	142
4.3.11	Total Composition of <i>Nannochloropsis oculata</i>	146
4.4	Summary of ASTM Procedures for Compositional Analysis	147
4.5	Biomass Pretreatment.....	147
4.6	Conclusion.....	149
4.7	Problems and Discussion Issues.....	150
4.7.1	Compositional Analysis of Corn Stover.....	150
4.7.1.1	Calculation of Percent Total Solids.....	150
4.7.1.2	Calculation of Percent Ash Content (Dry Basis).....	151
4.7.1.3	Calculation of Percent Extractives.....	151
4.7.1.4	Calculation of Percent Total Solids (Extractives-Free Biomass).....	151
4.7.1.5	Calculation of Percent AIL from Extractives-Free Sample.....	151
4.7.1.6	Calculation of Percent ASL (Extractives Free) and Percent Lignin (Extractives Free).....	152
4.7.1.7	Calculation of Percent Lignin (on as-Received Basis).....	152
4.7.1.8	Calculation of Percent Sugars.....	152
4.7.1.9	Biomass Compositional Analysis Summary....	153
	References.....	153
	Further Readings.....	155
5.	Biodiesel Production.....	157
5.1	Introduction.....	157
5.2	Available Oil Production in United States.....	160
5.3	Vegetable Oil and Animal Fat Characteristics.....	161
5.4	Fatty Acid Composition.....	162
5.5	Other Basic Oil Properties.....	164
5.6	Oil Extraction Processes.....	165
5.7	Oil Refining Processes.....	168
5.7.1	Degumming.....	168
5.7.2	Neutralization.....	170
5.7.3	Dewaxing.....	172

5.7.4	Bleaching.....	173
5.7.5	Deodorization.....	174
5.7.6	Vegetable Oil Refining Calculations	176
5.8	Transesterification.....	178
5.9	ASTM Characterization	181
5.9.1	Flash Point.....	181
5.9.2	Kinematic Viscosity	183
5.9.3	Cloud Point	185
5.9.4	Water and Sediment	187
5.9.5	Total and Free Glycerin.....	188
5.9.6	ASTM Analysis of Various Oil Seed Methyl Esters	189
5.10	Engine Performance and Exhaust Emissions	190
5.10.1	Engine Emissions.....	195
5.11	Design of Biodiesel Plants in United States	196
5.11.1	General Transesterification Processes.....	196
5.11.2	Crown Iron Works Design.....	197
5.11.3	Westfalia Biodiesel Plant Design	198
5.12	Conclusion.....	198
5.13	Problems and Discussion Issues.....	199
5.13.1	Various Types of Fatty Acids.....	199
5.13.2	Oil Refining Processes	199
5.13.3	Acreage to Establish 100 MGY Biodiesel Plant.....	200
5.13.4	Refining Processes	200
5.13.5	Refining Efficiency Calculations	200
5.13.6	ASTM Fuel Properties.....	200
5.13.7	Energy Density of Biodiesel	200
5.13.8	Biodiesel Production Processes	200
5.13.9	Transesterification Process	201
5.13.10	Engine Performance Testing (BSFC)	201
5.13.11	Engine Performance Testing (Net Brake Horsepower Calculations)	201
	References	202
	Further Readings	202
6.	Bioethanol Production.....	205
6.1	Introduction	205
6.2	Sugar Crops.....	208
6.2.1	Production of Ethanol from Sweet Sorghum.....	209
6.2.2	Ethanol Dehydration Methods	213
6.3	Starchy Crops.....	215
6.4	Cellulosic Biomass	219
6.5	Biomass Pretreatment Processes.....	221
6.5.1	Physical Pretreatment of Biomass	221
6.5.2	Chemical Pretreatment of Biomass	221
6.5.3	Enzymatic Pretreatment of Biomass	224

6.5.4	Combination of Various Pretreatment Methods	225
6.6	Household- and Village-Level Ethanol Production Systems.....	226
6.7	Pilot-Scale Ethanol Production Systems	230
6.8	Cellulosic Ethanol Studies	234
6.9	Commercial Cellulosic Ethanol Plants in United States.....	241
6.10	Conclusion.....	242
6.11	Problems and Discussion Issues	243
6.11.1	Rules of Thumb in Ethanol Production.....	243
6.11.2	First- and Second-Generation Biofuels	244
6.11.3	Sugars and Ethanol Yield from Sweet Sorghum	244
6.11.4	Fermentation Efficiency and Ethanol Yields per Unit of Area	244
6.11.5	Pretreatment and Ethanol Production Process	244
6.11.6	Differences in First- and Second-Generation Ethanol....	244
6.11.7	Enzyme and Its Role in Ethanol Production.....	244
6.11.8	Enzymatic Conversion of Lignocellulosics into Ethanol....	245
6.11.9	Advantages and Disadvantages of First- and Second- Generation Ethanol Production	245
6.11.10	Lignin Conversion and Uses	245
6.11.11	Improving Biofuel Production	245
	References	246
	Further Readings	247
7.	Biogas Production.....	249
7.1	Introduction	249
7.1.1	Hydrolysis	250
7.1.2	Acidogenesis.....	250
7.1.3	Acetogenesis	251
7.1.4	Methanogenesis	252
7.2	Biomass/Waste Parameters Important in Anaerobic Digestion	258
7.2.1	Biochemical Oxygen Demand	258
7.2.2	Chemical Oxygen Demand.....	259
7.2.3	Total Organic Carbon.....	260
7.2.4	Total Solids and Volatile Suspended Solids.....	261
7.2.5	Typical Septic Tanks or Municipal Solid Wastes Effluent Data.....	262
7.3	Acid- and Methane-Forming Microbes	263
7.4	Advantages and Disadvantages of Anaerobic Digestion Processes	264
7.4.1	Advantages of Anaerobic Digestion Processes	264
7.4.2	Disadvantages of Anaerobic Digestion Processes	265
7.5	Biogas Conversion Process and Digester Designs	265
7.6	First- and Second-Generation Biogas Digesters	267
7.6.1	Chinese Dome Type	267
7.6.2	Indian Gobar Gas Plant.....	269

7.6.3	Taiwanese Rectangular Digester Design.....	270
7.6.4	Cylindrical Above-Ground Digesters.....	272
7.6.5	High-Rate Biogas Digesters (Second-Generation Biogas Digesters).....	273
7.6.6	Anaerobic Filters.....	275
7.7	Design of Biogas Digester.....	277
7.8	Biogas Utilization.....	281
7.8.1	Cleaning Biogas for Use in Engines and Other Special Devices.....	282
7.9	Conclusion.....	283
7.10	Problems and Discussion Issues.....	284
7.10.1	Acid- and Methane-Producing Microbes.....	284
7.10.2	Theoretical Acetic Acid Production.....	284
7.10.3	Calculation of BOD.....	284
7.10.4	Calculation of COD.....	284
7.10.5	Use of Laboratory Data to Estimate Digester Size.....	285
7.10.6	Energy Produced from Biogas Daily.....	285
7.10.7	Volume of Biogas Required for Electrical Power Production.....	285
7.10.8	Amount of Sludge Produced in an Anaerobic Digester.....	285
7.10.9	Theoretical COD from Biomass.....	286
7.10.10	Estimating Minimum Size of Digester.....	286
	References.....	286
	Further Readings.....	287
8.	Torrefaction.....	289
8.1	Introduction.....	289
8.2	Bio-Physico-Chemical Changes in Biomass during Torrefaction.....	291
8.3	Torrefaction Products.....	293
8.3.1	Solid Products.....	293
8.3.2	Liquid Condensibles.....	294
8.3.3	Gaseous Products.....	295
8.4	Physical Properties of Torrefied Biomass.....	296
8.4.1	Bulk Density.....	296
8.4.2	Grindability.....	298
8.4.3	Particle Size Distribution, Sphericity, and Surface Area.....	299
8.4.4	Moisture Content.....	299
8.4.5	Storage Properties.....	301
8.4.6	Hydrophobicity.....	301
8.4.7	Pelletability.....	302
8.5	Comparison between Torrefied Biomass versus Pelleted Biomass.....	304
8.6	Thermal Gravimetric Analysis Studies of Biomass.....	305

8.7	Chemical Composition Changes during Torrefaction of Biomass	307
8.7.1	Carbon Content	308
8.7.2	Hydrogen Content	309
8.7.3	Calorific Value	310
8.7.4	Degree of Carbonization or Conservation of Carbon	311
8.7.5	H/C Ratio	311
8.7.6	Nitrogen and Sulfur Content	311
8.8	Advantages and Disadvantages of Torrefaction Process	312
8.8.1	Advantages of Torrefaction as Pretreatment Process	312
8.8.2	Disadvantages of Torrefaction as Pretreatment Process.....	313
8.9	Conclusion.....	313
8.10	Problems and Discussion Issues	314
8.10.1	Energy Densification for Torrefied Product	314
8.10.2	Determining Energy and Mass Balances in Torrefaction	314
8.10.3	Bulk Density of Torrefied Biomass.....	315
8.10.4	Bulk Density of Biomass	315
8.10.5	Grinding Energy Usage	315
8.10.6	Moisture Content of Torrefied Biomass.....	315
8.10.7	Durability of Biomass Pellets	316
8.10.8	Bulk Density of Torrefied Biomass.....	316
8.10.8	Energy Density Changes in Torrefied Biomass.....	316
8.10.10	Van Krevelen Plot of Raw Biomass	316
	References	317
	Further Readings	318
9.	Pyrolysis	319
9.1	Introduction	319
9.2	Various Pyrolysis Processes Based on Heating Rates	325
9.2.1	Slow/Conventional Pyrolysis	325
9.2.2	Fast/Flash Pyrolysis Systems.....	327
9.2.3	Flash Vacuum Pyrolysis.....	329
9.2.4	Ablative Pyrolysis	330
9.2.5	Microwave Pyrolyzer	332
9.3	Effects of Temperature on Product Yields from Pyrolysis of Microalgae	333
9.3.1	Microalgae Mass Balances.....	334
9.3.2	Microalgae Energy Balances	336
9.3.3	Overall Product Yields	341
9.4	Applications of Products from Fast Pyrolysis.....	342
9.5	Bio-Oil Characterization Processes	343
9.6	Bio-Oil Upgrade Processes	346
9.7	Studies on Pyrolysis of Various Biomass Resources.....	347
9.7.1	Cotton Gin Trash Pyrolysis	347

9.7.2	Switchgrass Pyrolysis Studies.....	347
9.7.3	Corn Stover Pyrolysis Studies.....	352
9.7.4	Sorghum Biomass Pyrolysis Studies.....	355
9.8	Conclusion.....	357
9.9	Problems and Discussion Issues.....	358
9.9.1	Effect of Temperature on Syngas Production in Pyrolysis.....	358
9.9.2	Pyrolysis Conditions that Favor Biochar and Bio-Oil Production.....	358
9.9.3	Advantages and Disadvantages of Pyrolysis Process	359
9.9.4	Problems and Issues of Pyrolysis Process at Extreme Temperatures.....	359
9.9.5	Energy Balance in Pyrolysis Process	359
9.9.6	Estimation of Residence Time in Fluidized Bed Reactor	359
9.9.7	Estimation of Residence Time in Auger Reactor.....	359
9.9.8	Calibration Curve for Augers.....	359
9.9.9	Calculation for HV of Synthesis Gas from Experiments....	360
9.9.10	Calculating Yields per Unit Weight of Biomass	360
	References	360
	Further Readings	361
10.	Gasification	363
10.1	Introduction.....	363
10.2	Chemistry of Biomass Gasification	366
10.3	Various Types of Gasifiers	368
10.3.1	Updraft Gasifier	368
10.3.2	Downdraft Gasifier.....	370
10.3.3	Crossdraft Gasifier.....	370
10.3.4	Fluidized Bed Gasifier.....	372
10.4	Applications of Biomass Gasifiers	377
10.4.1	Production of Thermal Sensible Heat.....	378
10.4.2	Electrical Power Generation	379
10.4.3	Mechanical Power Generation	381
10.4.4	Liquid Fuel Production from Synthesis Gas.....	385
10.5	Gasifier TDR and Throughput.....	385
10.6	Gasification Studies at TAMU.....	387
10.7	Conclusion.....	398
10.8	Problems and Discussion Issues.....	399
10.8.1	Empirical Chemical Formula of Biomass.....	399
10.8.2	Air-to-Fuel Ratio of Biomass for Thermal Conversion...	399
10.8.3	Air Requirement for Gasification	399
10.8.4	Volumetric Air Requirement in Fixed Bed Gasifiers	400
10.8.5	Acreage Needed to Build Power Plants.....	400
10.8.6	Equivalence Ratios Calculations in a Gasifier	400

10.8.7	Power from Manure Gasification	400
10.8.8	Superficial Velocity in Updraft Gasifiers.....	400
10.8.9	Syngas Requirement in Internal Combustion Engines..	401
10.8.10	Design of Downdraft Gasifier.....	401
	References	401
	Further Readings	402
11.	Advanced Gasification.....	403
11.1	Introduction	403
11.2	Determining Average Particle Size of Bed Material	408
11.3	Minimum Fluidizing Velocity, Terminal Velocity, and Pressure Drop in Fluidized Bed Reactors	410
11.4	Operation of 0.3048 Fluidized Bed Gasifier	414
11.4.1	Fluidized Bed Gasifier Operational Protocol.....	417
11.4.1.1	Gasifier Preparation	418
11.4.1.2	Start-Up.....	418
11.4.1.3	Sustained Operation	419
11.4.1.4	Shutdown Procedure	420
11.4.2	Proper Use of Bed Material	421
11.4.3	Cold Fluidization Tests	423
11.5	Designing Dimensions of Fluidized Bed Gasifier.....	423
11.6	Designing Dimensions of Series Cyclone Char Removal System	424
11.6.1	Primary (Low-Efficiency) Cyclone	425
11.6.2	Secondary (High-Efficiency) Cyclone	427
11.6.3	Pressure Drop in Cyclones	428
11.7	Direct Use of Synthesis Gas for Heat and Steam Production.....	429
11.8	Electrical Power Production from Fluidized Bed Gasification.....	430
11.9	Conclusion.....	432
11.10	Problems and Discussion Issues.....	433
11.10.1	Calculation of Bed Material Average Particle Size.....	433
11.10.2	Determining Minimum Fluidizing Velocity	434
11.10.3	Terminal Velocity Calculations.....	434
11.10.4	Volumetric Flow Rate Calculations.....	434
11.10.5	Pressure Drop through Fluidized Bed Gasifier	434
11.10.6	Capacity of Screw Conveyor	434
11.10.7	Determining Dimensions of Fluidized Bed Gasifier.....	435
11.10.8	Determining Dimensions of 1D2D Cyclone	435
11.10.9	Determining Dimensions of 1D3D Cyclone	435
11.10.10	Predicting Pressure Drop in Cyclones.....	435
11.10.11	Conversion of Biomass into Electrical Power Using Fluidized Bed.....	435
	References	436
	Further Readings	436

12. Biomass Liquefaction	439
12.1 Introduction	439
12.2 Indirect Liquefaction Processes	441
12.2.1 Methanol Production from Synthesis Gas	441
12.2.2 Mobil Process.....	444
12.2.3 Fischer–Tropsch Process	446
12.2.4 China Lake Process	450
12.3 Direct Liquefaction Processes	453
12.3.1 BOM or PERC Process.....	453
12.3.2 LBL Process.....	456
12.4 Other Biomass Liquefaction Processes	459
12.4.1 Hydrothermal Liquefaction (HTL) Process	460
12.4.2 Hydrolytic and Hydrothermal Upgrading (HTU) Processes	462
12.5 Advantages and Disadvantages of Biomass Liquefaction Processes	463
12.5.1 Advantages of Direct Liquefaction Process	463
12.5.2 Disadvantages of Direct Liquefaction Process	464
12.5.3 Advantages of Indirect Liquefaction Process	464
12.5.4 Disadvantages of Indirect Liquefaction Process	464
12.6 Conclusion.....	465
12.7 Problems and Discussion Issues.....	466
12.7.1 Heating Value of Synthesis Gas Produced from Pyrolysis	466
12.7.2 Methanol from Biomass Conversion Efficiency	466
12.7.3 Mobil Process Conversion Efficiency	466
12.7.4 Fischer–Tropsch Syngas Calculations.....	466
12.7.5 Heating Value of Syngas Produced for China Lake Process.....	467
12.7.6 BOM Process Efficiency Calculations.....	467
12.7.7 Determining Bio-Oil Yields by Hydrothermal Processes	467
12.7.8 Differences among BOM, PERC, and LBL Liquefaction Processes	468
12.7.9 Hydrogen-to-Carbon Ratios for Biomass Liquefaction Processes	468
12.7.10 Conversion Efficiency for HTU Process	468
References	468
Further Readings	470
13. Biomass Combustion	471
13.1 Introduction	471
13.2 Types of Biomass Combustion Systems.....	474
13.2.1 Spreader Stoker System.....	474

13.2.2	Fluidized Bed Combustion System.....	477
13.2.3	Biomass Cookstoves	480
13.3	Co-Combustion of Biomass and Co-Firing with Coal.....	484
13.4	Power Generation Case Studies in United States	485
13.5	Slagging and Fouling Issues with Agricultural Biomass.....	488
13.5.1	Coal Slagging and Fouling Indices	489
13.5.2	Other Slagging and Fouling Indices	490
13.5.2.1	Alkali Index.....	490
13.5.2.2	Base-to-Acid Ratio.....	492
13.5.2.3	Bed Agglomeration Index	493
13.6	Determining Eutectic (or Melting) Point of Biomass Ash Pellets.....	494
13.7	Applications of Biomass Combustion Systems.....	499
13.7.1	Cooking, Heating, Drying, and Steam Production	499
13.7.2	Mechanical Power Generation	500
13.7.3	Electrical Power Generation.....	500
13.7.4	Combined Heat and Power Applications.....	501
13.8	Conclusion.....	501
13.9	Problems and Discussion Issues.....	503
13.9.1	Amount of CO ₂ Produced for Every Metric Ton of Biomass Combusted	503
13.9.2	Amount of Air Needed for Combustion of Sorghum Biomass.....	503
13.9.3	Biomass Combustion Efficiency and Acreage Needed	503
