Preface

vii

Nomenclature

ix

1. Simplified Model

1.1

- 1.1 Introduction 1.1
- 1.2 Figures of Significance and Tolerance Limits 1.3
- 1.3 Equation of Motion 1.5
- 1.4 Torsional Vibration 1.10
- 1.5 Free Damped Vibration 1.13
- 1.6 Forced Vibration 1.18
 - 1.6.1 Determination of ξ by $\sqrt{2}$ Method 1.22
- 1.7 Critical Speed and Quality of Balance 1.24
- 1.8 Nature of Exciting Forces 1.31
 - 1.8.1 Reciprocating Engines and Compressors 1.31
 - 1.8.2 Torque Analysis 1.38
- 1.9 Shock Analysis 1.39
 - 1.9.1 Rectangular Forcing Function (Fig. 1.43) 1.39
 - 1.9.2 Force Linearly Varying with Time 1.40
 - 1.9.3 Force Decaying Exponentially 1.41
 - 1.9.4 A Symptotic Forcing Function 1.41
- 1.10 Vibration Isolation 1.46
 - 1.10.1 Force Transmissibility 1.46
 - 1.10.2 Displacement Transmissibility 1.49
 - 1.10.3 Choice of Isolators 1.52
 - 1.10.4 Conventional Springs 1.53
 - 1.10.5 Rubber Isolators 1.57
 - 1.10.6 Cork as an Isolator 1.65
- 1.11 Vibration Instruments 1.69
 - 1.11.1 Mechanical Exciters 1.69
 - 1.11.2 Electrical Exciters and Transducers 1.75
 - 1.11.3 Frequency Analysers 1.83
 - 1.11.4 Free Vibration Measurement Using Impulse Hammer 1.85
 - 1.11.5 Vibration Analysers 1.85

Exercises 1.86

2. Two Degree of Freedom Systems	2.1
2.1 Formulation of the Problem	2.1
2.2 Coupling Between Translation and Rotation	2.5
2.3 Applications	2.7
2.3.1 Machine Foundations	2.7
2.3.2 Stockbridge Damper	2.11
<i>Exercises</i>	2.16
3. Multidegree Freedom System	3.1
3.1 Close Coupled Systems	3.1
3.2 Lateral Vibration Problems	3.2
3.3 Geared Systems	3.4
3.4 Torsional Vibration Problems	3.7
3.4.1 Peculiarities of Torsional Systems	3.7
3.5 Effect Of Gyroscopic Action of the Disc on Critical Speeds	3.9
<i>Exercises</i>	3.13
4. Numerical Methods	4.1
4.1 Holzer's Method	4.1
4.2 Myklestad's Method	4.6
4.3 Sturm Sequence	4.7
<i>Exercises</i>	4.11
5. Energy Methods	5.1
5.1 Single Degree of Freedom System	5.1
5.2 Two Degree of Freedom System	5.2
5.3 Lateral Vibration Problems	5.4
5.4 Dunkerley's Method	5.7
5.5 Rayleigh Ritz's Method	5.8
5.6 Energy Expressions for Other Members	5.9
<i>Exercises</i>	5.13
6. Continuous Systems	6.1
6.1 Vibration of Strings	6.2
6.2 Bar in Tension or Compression	6.5
6.3 Rod in Torsion	6.6
6.4 Beam in Bending	6.7
<i>Exercises</i>	6.9
7. Finite Element Method	7.1
7.1 Properties of Eigenvalues and Eigenvectors	7.1

7.1.1	Standard Eigenvalue Problem	7.1
7.1.2	Orthogonal Transformation	7.1
7.1.3	Eigenvalues with a Shift	7.2
7.1.4	Eigenvalues of a Real Symmetric Matrix	7.2
7.1.5	Eigenvectors of a Real Symmetric Matrix	7.2
7.2	Non Standard Eigenvalue Problems	7.6
7.3	Finite Element Formulation	7.7
7.3.1	Finite Element Procedure	7.7
7.3.1	Beam Element (Beam Bending in One Plane)	7.8
7.3.2	Beam Bending in Two Planes at Right Angles to Each Other	7.11
7.4	Converting a Non Standard Eigenvalue Problem	7.14
7.5	Cholesky Factorisation	7.14
7.6	Unconventional Form of Storage of [K] and [M]	7.17
7.7	Concept of Iteration	7.18
7.8	Simultaneous Iteration Scheme	7.22
7.9	Subspace Iteration	7.26
7.10	Lanczos Method	7.29
7.11	Transformation of Coordinates	7.34
7.12	Gyroscopic Effect	7.37
7.13	Frequency Analysis of Industrial Rotors	7.38
7.13.1	I.C. Engine Rotor	7.38
7.13.2	1.5 MW Steam Turbine Rotor	7.41
7.13.3	250 MW Steam Turbine Rotor	7.43
7.13.4	Turbocharger Rotor	7.46
7.14	Some Typical Natural Frequencies	7.49
7.15	Applications of 3D Beam Element	7.49
	<i>Exercises</i>	7.50

8. Diagnostics and Field Balancing

8.1

8.1	Diagnostics	8.1
8.2	Condition Monitoring in Real Time	8.4
8.3	Engine Diagnostics	8.7
8.4	Field Balancing of Rotors	8.10
8.4.1	Single Plane Balancing	8.10
8.4.2	Two Plane Balancing	8.13

Exercises 8.17

9. Case Studies in Vibration

9.1

9.1	Rotor Unbalance	9.3
-----	-----------------	-----

- 9.1.1 Sugar Centrifugal 9.3
- 9.1.2 Air Separator 9.6
- 9.2 Critical Speed Close to Running Speed 9.7
 - 9.2.1 Preheater Fan 9.7
- 9.3 Housing Frequency Close to Exciting Frequency 9.8
 - 9.3.1 Cooling Tower Fan 9.8
 - 9.3.2 Design of Drive Housing 9.10
 - 9.3.3 Paper Machine Base 9.12
 - 9.3.4 Strengthening the Cooling Fan Base 9.14
 - 9.3.5 Support for Heavy Duty Pump 9.15
- 9.4 Choice of Isolator 9.17
 - 9.4.1 Sewing Machine 9.17
 - 9.4.2 Continuous Sugar Centrifugal 9.18
- 9.5 Role of Foundation 9.19
 - 9.5.1 Two Stage Compressor 9.19
 - 9.5.2 Kiln Foundation 9.21
 - 9.5.3 Cement Mill Foundation 9.23
- 9.6 A Complicated Case 9.26

10. Noise Control

10.1

- 10.1 Nature of Sound 10.1
 - 10.1.1 Sound Pressure Level 10.1
 - 10.1.2 Sound Power Level 10.2
 - 10.1.3 Sound Intensity Level 10.3
 - 10.1.4 Frequency 10.4
 - 10.1.4 Combining Decibels 10.5
- 10.2 Sound Propagation 10.6
 - 10.2.1 Point Source 10.6
 - 10.2.2 Line Source 10.6
- 10.3 Sound Measurement Analysis 10.7
 - 10.3.1 Sound Level Meter 10.7
 - 10.3.2 Spectrum Analysers 10.11
- 10.4 Noise Control 12
 - 10.4.1 Sound Absorption 10.12
 - 10.4.2 Sound Isolation 10.14
 - 10.4.3 Muffling 10.15
- 10.5 Comparison of Characteristics of Vibration and Sound – Summary 10.18
- Exercises 10.18*

11. Summary	11.1
