Preface	xi
Author Biography	xv
Nomenclature	xvii
1 Introduction to System Dynamics	1
1.1 Introduction	2
1.2 System Decomposition and Model Complexity	4
1.3 Mathematical Modeling of Dynamic Systems	6
1.4 Analysis and Design of Dynamic Systems	8
1.5 Control of Dynamic Systems	9
1.6 Diagrams of Dynamic Systems	12
1.7 A Graph-Centered Approach to Modeling	13
1.8 Power and Energy Variables	13
1.9 Bonds, Ports, Signals, Inputs, and Outputs	16
1.10 Word Bond Graphs	17
1.11 Summary	19
1.12 Review	20
1.13 Problems	20
1.14 Challenges	24
2 Basic Bond Graph Elements	27
2.1 Introduction	27
2.2 Basic 1-Port Elements	28
2.2.1 R-Elements	29
2.2.2 C-Elements	31
2.2.3 I-Elements	33
2.2.4 R-, C-, and I-Elements and the Tetrahedron of State	36
2.2.5 Effort and Flow Sources	37

2.3	Basic 2-Port Elements	39
2.3.1	Transformers (TF-Elements)	39
2.3.2	Gyrators (GY-Elements)	42
2.4	Junction Elements	43
2.5	Simple Bond Graph Examples	48
2.6	Linear versus Nonlinear Systems and Linearization	52
2.7	Summary	56
2.8	Review	57
2.9	Problems	58
2.10	Challenges	60
3	Bond Graph Synthesis and Equation Derivation	63
3.1	Introduction	63
3.2	General Guidelines	64
3.3	Mechanical Translation	66
3.4	Mechanical Rotation	74
3.5	Electrical Circuits	78
3.6	Hydraulic Circuits	86
3.7	Mixed Systems	91
3.8	State Equation Derivation	93
3.9	Algebraic Loops and Derivative Causality	107
3.10	Summary	113
3.11	Review	114
3.12	Problems	115
3.13	Challenges	118
4	The State Space and Numerical Simulation	119
4.1	Introduction	119
4.2	The State Space	120
4.3	Composing State-Space Representations	121
4.4	Basic Transient Responses	128
4.4.1	The Unit Impulse	129
4.4.2	The Unit Step	130
4.4.3	The Unit Ramp	131
4.5	State-Space Simulations Using MATLAB	132
4.6	Applications	134
4.7	State Transformations	141
4.8	Summary	145
4.9	Review	146
4.10	Problems	146

4.11	Challenges	149
5	Laplace Transforms	151
5.1	Introduction	151
5.2	Complex Numbers, Variables, and Functions	152
5.2.1	Complex Numbers	153
5.2.2	Euler's Theorem	154
5.2.3	Complex Algebra	156
5.2.4	Complex Variables and Functions	158
5.3	The Laplace Transform	159
5.4	Common Functions and Their Transforms	160
5.5	Advanced Transforms and Theorems	164
5.6	Inverse Laplace Transforms	173
5.7	Poles, Zeros, Partial Fraction Expansions, and MATLAB	181
5.8	Summary	185
5.9	Review	185
5.10	Problems	186
5.11	Challenges	188
6	Impedance Bond Graphs	191
6.1	Introduction	191
6.2	Laplace Transform of the State-Space Equation	192
6.3	Basic 1-Port Impedances	197
6.4	Impedance Bond Graph Synthesis	200
6.5	Junctions, Transformers, and Gytrators	203
6.6	Effort and Flow Dividers	206
6.7	Sign Changes	208
6.8	Transfer Function Derivation	212
6.9	Alternate Derivation of a Transfer Function	225
6.10	Model Transformations using MATLAB	228
6.11	Summary	231
6.12	Review	233
6.13	Problems	233
6.14	Challenges	236
7	Time Domain Analysis	237
7.1	Introduction	237
7.2	Transient Responses of First-Order Systems	238
7.2.1	The Natural Response	239
7.2.2	The Impulse Response	239

7.2.3	The Step Response	240
7.2.4	The Ramp Response	243
7.3	Transient Responses of Second-Order Systems	245
7.3.1	The Natural Response	246
7.3.2	The Natural Frequency, Damping Ratio, and Pole Placement	255
7.3.3	The Impulse Response	258
7.3.4	The Step Response	261
7.3.5	The Ramp Response	264
7.4	Transient Responses of Higher-Order Systems	266
7.5	An Introduction to Pole-Zero Analysis	269
7.6	Pole-Zero Analysis Using MATLAB	272
7.7	Pole-Zero Analysis in the State Space	276
7.8	Steady-State Space Analysis	279
7.9	Summary	281
7.10	Review	283
7.11	Problems	284
7.12	Challenges	287
8	Frequency Domain Analysis	289
8.1	Introduction	289
8.2	Properties of Sinusoids	291
8.3	The Sinusoidal Transfer Function	292
8.4	Complex Operations Using MATLAB	298
8.5	Mechanical Vibration	301
8.5.1	Transmissibility	301
8.5.2	Modal Analysis of Free Vibration	307
8.6	AC Circuits	314
8.7	The Bode Diagram	322
8.7.1	Frequency Responses of First-Order Factors	324
8.7.2	Frequency Responses of Second-Order Factors	332
8.7.3	Frequency Responses of Higher-Order Systems	336
8.8	Summary	341
8.9	Review	343
8.10	Problems	344
8.11	Challenges	347
9	Classical Control Systems	349
9.1	Introduction	349
9.2	Block Diagram Algebra	351

9.3	Proportional, Integral, and Derivative Control Actions . . .	354
9.4	Higher-Order Systems and Dominant Closed-Loop Poles . .	359
9.5	Static Error Constants	362
9.6	Stability Analysis	367
9.7	Root-Locus Analysis	378
9.8	Plotting the Root Locus Using MATLAB	398
9.9	Tuning PID Compensators	402
9.10	Relating the Transient and Frequency Responses	410
	9.10.1 Stability Analysis in Frequency Domain	411
	9.10.2 Resonance and the Damping Ratio	412
	9.10.3 Phase Margin and the Damping Ratio	415
	9.10.4 Cutoff Frequency and Bandwidth	417
9.11	Compensator Design Using Bode Plot Analysis	418
	9.11.1 Design of Lead Compensators	419
	9.11.2 Design of Lag Compensators	425
	9.11.3 Design of Lead-Lag Compensators	430
	9.11.4 Gain and Phase Margins Using MATLAB	437
9.12	Summary	439
9.13	Review	442
9.14	Problems	443
9.15	Challenges	446
10	Modern Control Systems	447
10.1	Introduction	448
10.2	State Feedback Control	449
10.3	Control System Analysis in the State Space	452
10.4	Control Design Using Pole Placement	458
10.5	Ackermann's Formula	467
10.6	Optimal Control and the Linear Quadratic Regulator	468
10.7	State Observers	472
10.8	State-Space Control Design Using MATLAB	477
10.9	MIMO Control	483
10.10	Summary	488
10.11	Review	489
10.12	Problems	490
10.13	Challenges	492
	Bibliography	493
	Index	495
