Preface

Chapter 1 Introduction	1
1.1 Conception of Enzyme and Its Development	2
1.2 The Characteristics of Enzyme Action	3
1.3 Factors that Affecting Enzyme Action	7
1.4 Classification and Nomenclature of Enzymes	11
1.5 Determination of Enzyme Activity	19
1.6 Methods for Enzymes Production	24
1.7 Development Survey of Enzyme Engineering	28
Review and Thinking	32
Chapter 2 Enzyme Production by Microbial Fermentation	33
2.1 Regulation of Enzyme Biosynthesis in Microbial Cells	34
2.2 Characteristic of Microbes for Enzyme Production	49
2.3 Fermentation Process Conditions and Its Control	53
2.4 Enzyme Fermentation Kinetics	65
2.5 Enzyme Production by Immobilized Cell Fermentation	71
2.6 Enzyme Production by Immobilized Protoplast Fermentation	78
Review and Thinking	80
Chapter 3 Enzyme Production by Animal and Plant Cell Cultures	81
3.1 The Regulation of Enzyme Biosynthesis in Animal and Plant Cells	82
3.2 Enzyme Production by Plant Cell Culture	86
3.3 Enzyme Production by Animal Cell Culture	97
Review and Thinking	105
Chapter 4 Extraction, Separation and Purification of Enzymes	106
4.1 Cell Disruption	106
4.2 Enzyme Extraction	110
4.3 Precipitation Separation	113
4.4 Centrifugal Separation	118
4.5 Filtration and Membrane Separation	124
4.6 Chromatographic Separation	130
4.7 Electrophoresis Separation	150
4.8 Extraction Separation	160
4.9 Crystallization	167
4.10 Concentration and Drying	170
Review and Thinking	172
Chapter 5 Enzyme Molecular Modification	174
5.1 Metal Ion Substitution Modification	175

5.2	Macromolecular Binding Modification	177
5.3	Side Chain Group Modification	181
5.4	Peptide Chain Limited Hydrolysis Modification	187
5.5	Nucleotide Chain Cleavage Modification	188
5.6	Amino Acid Substitution Modification	189
5.7	Nucleotide Substitution Modification	192
5.8	Physical Modification	193
5.9	Application of Enzyme Molecular Modification	194
	Review and Thinking	200
Chapter 6	Immobilization of Enzymes, Cells and Protoplasts	201
6.1	Enzyme Immobilization	203
6.2	Cell Immobilization	216
6.3	Protoplast Immobilization	228
	Review and Thinking	231
Chapter 7	Enzyme Catalysis in Non-aqueous Phases	232
7.1	The Main Scopes of Enzyme Catalysis in Non-aqueous Phase	233
7.2	Effects of Water and Organic Solvents on Enzyme Catalysis in Organic Media ...	234
7.3	The Catalytic Characters of Enzymes in Organic Media	240
7.4	Conditions of Enzyme Catalytic Reaction in Organic Media and Its Control	244
7.5	Application of Enzyme Catalysis in Non-aqueous Phase	251
	Review and Thinking	260
Chapter 8	Enzyme Directed Evolution	261
8.1	The characteristics of Enzyme Directed Evolution	263
8.2	Random Mutation of Enzyme Gene	264
8.3	Directed Selection of Enzyme Gene Mutants	270
8.4	The Applications of Enzyme Directed Evolution	281
	Review and Thinking	283
Chapter 9	Enzyme Reactors	285
9.1	Types of Enzyme Reactors	286
9.2	Choice of Enzyme Reactors	292
9.3	Design of Enzyme Reactors	296
9.4	Enzyme Reactor Operation	301
	Review and Thinking	306
Chapter 10	Applications of Enzymes	307
10.1	Enzymes Application in Pharmaceutical Industry	307
10.2	Application of Enzymes in Food	328
10.3	Enzyme Application in Light and Chemical Industries	342
10.4	Enzyme Application in Environmental Protection	349
10.5	Enzyme Application in Biotechnology	352
	Review and Thinking	358
Main references	359
