

Table of Contents

Chapter 1. Introduction	1
Chapter 2. Modeling Tools	7
Sébastien CABARET and Mohammed CHADLI	
2.1. Introduction	7
2.2. Models.	9
2.2.1. Knowledge models	9
2.2.2. Behavioral models	11
2.3. The classic parametric identification methods	14
2.3.1. Graphic methods	14
2.3.2. Algorithmic methods.	15
2.3.3. Validation and estimation of the model identified.	19
2.4. Multi-model approach	23
2.4.1. Introduction	23
2.4.2. Techniques for obtaining multi-models	23
2.5. Bibliography	40
Chapter 3. Control Tools	43
Mohammed CHADLI and Hervé COPPIER	
3.1. Linear controls	43
3.1.1. The PID corrector.	43
3.1.2. The Smith predictor	44
3.1.3. Predictive functional control	49
3.1.4. Generalized predictive control	55
3.1.5. The RST controller	60
3.1.6. Implementation of the advance algorithms on a programmable logic controller: results	63
3.2. Multi-model control	82

3.2.1. Introduction	82
3.2.2. Stability analysis	83
3.2.3. State feedback control	86
3.2.4. Reconstructed state feedback control	90
3.2.5. Static output feedback control	93
3.2.6. Conclusion	97
3.3. Bibliography	98
Chapter 4. Application to Cryogenic Systems	103
Marco PEZZETTI, Hervé COPPIER and Mohammed CHADLI	
4.1. Introduction	103
4.1.1. Cryogenics and its applications at CERN.	103
4.1.2. Some basics about cryogenics	109
4.2. Modeling and control of a cryogenic exchanger for the NA48 calorimeter at CERN	112
4.2.1. Description of the cryogenic installations in the NA48 calorimeter	115
4.2.2. Thermal model	118
4.2.3. The TDC (Time Delay Control) corrector: application to a liquid-krypton cryogenic exchanger.	120
4.3. Modeling and control of the cryogenics of the ATLAS experiment at CERN	128
4.3.1. Context and objectives of the study	128
4.3.2. Process of identification of cryogenic systems.	130
4.3.3. Experimental protocol of parametric identification	136
4.3.4. Mono-variable system	142
4.3.5. Compensation for the delay with a Smith controller based on the PI corrector UNICOS	149
4.3.6. Multi-variable system	151
4.4. Conclusion	158
4.4.1. Motivations	159
4.4.2. Main contributions	160
4.5. Appendices	160
4.5.1. Appendix A	160
4.6. Bibliography	164
Chapter 5. Applications to a Thermal System and to Gas Systems	165
Sébastien CABARET and Hervé COPPIER	
5.1. Advanced control of the steam temperature on exiting a superheater at a coal-burning power plant	165
5.1.1. The issue	165

5.1.2. The internal model corrector (IMC)	166
5.1.3. Multi-order regulator: 4th-order IMC	169
5.1.4. Results	171
5.2. Application to gas systems.	174
5.2.1. The gas systems.	174
5.2.2. The major regulations	180
5.2.3. The control system and acquisition of measurements.	183
5.2.4. Modeling, identification and experimental results.	184
5.3. Conclusion	202
5.4. Bibliography	202
Chapter 6. Application to Vehicles.	203
Elie KAFROUNI and Mohammed CHADLI	
6.1. Introduction.	203
6.2. Hydraulic excavator-loader	204
6.2.1. Conventional manual piloting	205
6.3. Principle of movement of a part of the arm	206
6.3.1. Role of the drivers	206
6.3.2. Objectives	207
6.3.3. Functional specification of the interface	211
6.3.4. Limit of articular position and velocities	238
6.3.5. Articular limits	248
6.3.6. Limits of the articular velocities	259
6.3.7. 3D simulation	267
6.3.8. Onboard computer architecture.	271
6.3.9. Conclusion.	275
6.4. Automobiles	275
6.4.1. Models of automobiles.	275
6.4.2. Validation of vehicle models	286
6.4.3. Robust control of the vehicle's dynamics.	298
6.4.4. Conclusion.	318
6.5. Bibliography	319
Chapter 7. Real-time Implementation	323
Marco PEZZETTI and Hervé COPPIER	
7.1. Implementation of algorithms on real-time targets around distributed architectures	323
7.1.1. Introduction	323
7.1.2. Object-oriented programming in the case of a framework.	324
7.1.3. MultiController	333
7.2. A distributed architecture for control (rapidity/reliability): excavator-loader testing array.	347

viii Command-control for Real-time Systems

7.2.1. Objectives of the testing array	347
7.2.2. Presentation of the onboard computer platform	348
7.2.3. Examination of the rapidity of the onboard computer structure.	350
7.2.4. Results	358
7.3. Conclusion	361
7.4. Bibliography	362
General Conclusion	363
List of Authors	367
Index	369
