1 How Pipelines Differ	1
Crude Oil Pipelines	3
Refined Products Pipelines	4
Natural Gas Pipelines	5
Pipeline Customers	6
2 The First Leg	9
Creating Nostalgia	9
Enter Competition	12
Oily Beginnings	12
Gaseous Progress	14
Endeavor and Technology	16
Disturbed Interests	18
The Russians	19
Separate Ways	21
Expansion	22
The Great Offshore	23
Diversity	26
Shifting Sands	27
References	28
3 How Pipelines Work	29
The Physics of Fluid Flow	29
Municipal Water Systems	31
Friction Losses, Pipe Lengths, and Flow Rates	32
Splitting flows	34

Hydraulic Properties of Hydrocarbon Fluids	35
Measures and dimensions	35
Density	37
Viscosity	39
Pour point	41
Vapor pressure and evaporation	41
Pressure	44
Compressibility	44
Why gases behave that way	45
Hydraulics	47
Basic Flow Principles and Equations	47
The First Law of Thermodynamics	47
Bernoulli's equation	48
Flow characteristics	49
Friction loss	50
Elevation loss (or gain)	51
Flow rates and capacities	54
Conclusion	55
4 Oil Pipeline Operations	57
Crude Oil Lines—a Brief Review	57
Refined Products Lines—a Brief Review	58
Field Operations to Central Control Room	59
Crude oil receipt and delivery field operations	59
Refined products receipt and delivery field operations	62
Central Control Room Operations	63
Planning and scheduling operations	65
The scheduler's role	66
The controller's role	68
Hydraulic concepts—practical applications in mainline operations	72
The Control Room	79
Routine operations	80
Abnormal operations	84
Operator Training	85
References	86
5 Natural Gas Pipeline Operations	87
Natural Gas Lines—a Brief Review	88
Gathering lines	89
Gas processing plants	90
Receipts from LNG facilities	92
Pipeline hubs	93

From Field Operations to Central Control Room Operations.	94
Natural gas field operations.	94
Natural gas delivery operations.	99
Central Control Rooms.	100
Planning and scheduling operations.	101
Monitoring and controlling the pipeline.	103
Hydraulic concepts—optimizing line operation.	104
Routine operations.	105
Quality control.	106
Abnormal operations.	106
Operator Training.	107
References.	107
6 Petrochemical and LPG Pipeline Operations	109
Definitions.	109
Product Characteristics.	110
C4 products.	110
C3 products.	111
C2 products.	111
Compressibility.	112
Leak Detection.	112
Measurement.	113
Quality.	113
Commissioning and Decommissioning.	114
Freezing temperatures.	114
Storage.	115
Hydraulics.	117
Addendum—Supercritical Fluids.	118
7 Offshore Pipelines.	121
Line Design.	122
Installing Subsea Pipelines.	124
The boon and bane of buoyancy.	124
Laying pipe.	125
S-lay.	125
J-lay.	126
Reel barge.	128
Tow-in.	130
Bottom Conditions.	131

Risers	131
Attached risers.	131
Pull tubes	132
Steel catenary riser	132
Top-tensioned risers	134
Riser tower.	135
Flexible risers	136
ROVs	136

8 SCADA, Controls, and Leak Detection. 139

SCADA	140
Design and Control	141
Human versus computer decision making	141
Local or central control	142
Manual or automated	143
Communications	143
Human machine interface.	146
Real-time operating data	147
Configuration tool.	150
Application interface	150
Historic database.	150
Amount of data to gather	151
Update frequency	151
Update process	152
Corrupted data	152
Indicators, alarms, and alarm filtering.	153
SCADA performance.	155
Data sharing	156
Reports and logs	156
Security.	157
SCADA in summary	157
Local SCADA.	158
Leak Detection	158
Leaks and releases	159
Leak detection systems.	160
Leak detection methods.	162
Internal systems.	163
External systems	167
Conclusion.	168

9	Maintenance	169
	What Causes Releases?	170
	Equipment damage	171
	Corrosion	173
	Mechanical failures	174
	Natural hazards	176
	Other causes of failures	180
	How to Prevent Damage	180
	Equipment damage	180
	Corrosion	184
	Mechanical failures	186
	Natural hazards	186
	Other causes of failure	187
	Finding Potential Problems before They Become Failures	187
	Internal inspection devices	187
	Hydrostatic testing	190
	Electrical surveys	192
	Direct assessment	196
	Risk and Pipeline Safety	197
	Consequences	198
	Probabilities	198
	Framework for considering risk	198
	Data	202
	Integrity Management Plan	203
	Repairs	204
	Replacing the pipe	204
	Reinforcing the pipe	206
	Grinding to reduce stress concentrations	207
	Deposited weld metal	208
	Coating repairs	208
	Other Maintenance Activities	209
	Line lowering	209
	ROW maintenance	209
	Cathodic maintenance	210
	Maintenance pigging	210
	References	212

10	Investment Decisions	213
	Why Are They Built?	213
	Who Decides to Build?	214
	How Is the Decision Made?	216
	Demand and supply	216
	Economics	218
	Ownership Changes	224
	Master Limited Partnerships	225
	Determining the Purchase and Sales Price	226
	Economic value	226
	Comparable sales	227
	Highest and best use	227
	Reconstruction cost new	227
	Book value	228
11	Major Components and How They Work	229
	Pipe	229
	Manufacturing methods	230
	Properties of pipe	231
	Nonferrous pipe	232
	Coatings	232
	Fusion bond epoxy	233
	Coal tar	234
	Plastics	234
	Tapes	234
	Shrink sleeves	235
	Concrete coating	236
	Fittings and Flanges	236
	Fittings	236
	Flanges	238
	Valves	238
	Gate valves	239
	Ball valves	240
	Plug valves	240
	Check valves	243
	Globe valves	244
	Pressure relief valves	245
	Actuators	246
	Pumps and Compressors	247
	Positive displacement pumps and compressors	247
	Centrifugal compressors and pumps	252

Prime Movers	257
Engines	258
Electric motors	259
Turbines	259
Variable Speed Devices	260
Mechanical VSDs	260
Electrical variable frequency drives	260
Meters	261
Positive displacement meters	261
Turbine meters	262
Orifice meters	263
Ultrasonic meters	264
Coriolis meters	265
Provers	265
Pipe provers	265
Master meters	266
Other Components	267
