

Contents

Preface	xix
List of Authors	xxiii
1. Introduction	1
1.1 Overview	1
1.1.1 A Perspective on Solid Fuel Utilization	2
1.1.2 Fuels and Combustion Technology Development	4
1.2 Solid Fuels Used in Electricity Generation and Process Industry Applications	5
1.2.1 Characteristics of Solid Fuels	5
1.2.2 Some Economic Considerations of Solid Fuels	8
1.3 The Combustion Process for Solid Fuels	11
1.3.1 Combustion Mechanism Overview	12
1.3.2 Heating and Drying	12
1.3.3 Pyrolysis or Devolatilization	15
1.3.4 Volatile Oxidation Reactions	18
1.3.5 Char Oxidation Reactions	19
1.3.6 Formation of Airborne Emissions	21
1.3.7 Reactions of Inorganic Matter	22
1.3.8 Combustion and Heat Release	24
1.4 The Combustion System	26
1.4.1 Fuel Quality and Fuel Management	26
1.4.2 Fuel Preparation	27
1.4.3 Burners and the Combustion Systems	28
1.4.4 Post-Combustion Controls	29
1.5 Organization of This Book	30
1.6 References	30
2. Coal Characteristics	33
2.1 Introduction to Coal	33
2.1.1 Coal Formation and Coalification	34

2.2	Coal Classification	37
2.2.1	Coal Rank	37
2.2.2	Coal Type	38
2.2.3	Coal Grade	41
2.2.4	Coal Classification	41
	2.2.4.1 ASTM Classification System	41
	2.2.4.2 International Classification System	41
2.3	Coal Reserves/Resources	44
2.3.1	World Coal Reserves	44
2.3.2	United States Coal Resources and Reserves	47
2.4	Coal Production	48
2.4.1	World Coal Production	51
2.4.2	United States Coal Production	52
2.5	Traditional Coal Characterization Methods and Their Industrial Application	61
2.5.1	Proximate Analysis	69
2.5.2	Ultimate Analysis	70
2.5.3	Heating Value	70
2.5.4	Sulfur Forms	71
2.5.5	Chlorine	71
2.5.6	Grindability	71
2.5.7	Ash Composition	71
2.5.8	Trace Element Characterization	72
2.5.9	Ash Fusion	72
2.5.10	Free-Swelling Index (FSI)	72
2.5.11	Petrography/Coal Reflectance	73
2.6	Nontraditional Characterization Methods and Their Industrial Application	73
2.6.1	Coal Structure	74
2.6.2	Coal Reactivity	74
2.6.3	Volatile Matter Evolution Patterns	77
2.7	References	80
3.	Characteristics of Alternative Fuels	83
3.1	Introduction	83
3.1.1	Typical Alternative Fuel Applications	84
	3.1.1.1 The Use of Alternative Fuels in Electric Utility Boilers	84
	3.1.1.2 Cofiring Alternative Fuels in Process Industries and Independent Power Producers	86
3.2	Petroleum Coke	87
3.2.1	Petroleum Coke Production Processes	88

3.2.2	Fuel Characteristics of Petroleum Coke	88
3.2.2.1	Proximate and Ultimate Analysis of Petroleum Coke	89
3.2.2.2	Ash Characteristics of Petroleum Coke	90
3.2.3	Petroleum Coke Utilization in Cyclone Boilers	92
3.2.4	Cofiring Petroleum Coke in Pulverized Coal Boilers	93
3.2.5	Petroleum Coke Utilization in Fluidized-Bed Boilers	94
3.3	Woody Biomass	96
3.3.1	Types of Woody Biomass Fuels	98
3.3.2	Physical and Chemical Characteristics of Woody Biomass Fuels	99
3.3.2.1	Proximate and Ultimate Analysis of Woody Biomass	100
3.3.2.2	Inorganic Matter in Woody Biomass	100
3.3.2.3	Trace Metal Concentrations	101
3.3.3	Using Woody Biomass in Dedicated Boilers	102
3.3.4	Woody Biomass in Pulverized Coal Firing Applications	106
3.3.5	Cofiring Woody Biomass in Cyclone Boilers	107
3.3.6	Conclusions Regarding Using Woody Biomass as an Alternative Fuel	108
3.4	Tire-Derived Fuel (TDF)	110
3.4.1	General Description of Tire-Derived Fuel	111
3.4.2	Fuel Characteristics of Tire-Derived Fuel	112
3.4.2.1	Proximate and Ultimate Analysis of Tire-Derived Fuel	112
3.4.2.2	Ash Constituents of TDF	113
3.4.2.3	Trace Element Emissions from TDF	114
3.4.3	Cofiring Applications with Tire-Derived Fuel	114
3.4.4	Summary Regarding TDF as an Alternative Fuel	115
3.5	Herbaceous Crops	116
3.5.1	Types of Herbaceous Biomass Fuels	116
3.5.2	Sources and Uses of Herbaceous Materials	117
3.5.3	Fuel Characteristics of Switchgrass and Related Agricultural Biomass Materials	118
3.5.3.1	Density of Switchgrass and Related Materials	118
3.5.3.2	Proximate and Ultimate Analysis of Switchgrass and Related Agricultural Materials	119
3.5.3.3	Ash Chemistry for Herbaceous Biomass Fuels	121
3.5.4	Herbaceous Crop Summary	123
3.6	References	124

4. Characteristics and Behavior of Inorganic Constituents	133
4.1 Introduction	133
4.2 Inorganic Composition of Coal	136
4.2.1 Distribution of Inorganic Constituents in Coal	136
4.2.2 Methods of Determining Inorganic Composition	137
4.2.3 General Coal Characteristics	148
4.2.3.1 Lignites	148
4.2.3.2 Subbituminous Coals	148
4.2.3.3 Bituminous Coals	149
4.2.3.4 World-Traded Coals	150
4.3 Ash Formation: Transformation of Coal Inorganic Constituents	151
4.4 Ash Deposition Formation	153
4.4.1 Deposition Phenomena in Utility Boilers	153
4.4.2 Slagging Deposits	155
4.4.3 Fouling Deposits	156
4.4.4 High-Temperature Fouling	157
4.4.5 Low-Temperature Fouling	158
4.4.6 Ash Impacts on SCR Catalyst	159
4.4.7 Deposit Thermal Properties	160
4.5 Deposit Strength Development	161
4.6 Deposit Characterization	162
4.7 Predicting Ash Behavior	167
4.7.1 Advanced Indices	167
4.7.2 Mechanistic Models	167
4.8 References	167
5. Fuel Blending for Combustion Management	171
5.1 Introduction	171
5.1.1 Types of Fuel Blending	172
5.1.2 The Reasons for Fuel Blending	173
5.1.3 Issues for Fuel Blending	174
5.2 Equipment and Controls Issues Associated with Fuel Blending	175
5.2.1 The Blending System at Monroe Power Plant	176
5.2.2 Alternative Blending Systems	177
5.3 Fuel and Combustion Effects of Blending	181
5.3.1 Blending Overview	182
5.3.2 The Monroe Power Plant Case Study	182
5.3.2.1 Development of Combustion Models as an Analytical Tool	182
5.3.2.2 Fuel Effects of Blending at Monroe	185
5.3.2.3 Volatility and Volatile Release Patterns	185
5.3.2.4 Char Oxidation	187
5.3.2.5 Ash Chemistry	187

5.3.3	Fuel Effects for Other Locations	193
5.4	Operational Issues with Fuel Blending	193
5.4.1	Managing Inorganic Constituents	194
5.4.2	Managing the Fire	194
5.4.3	Managing Blend Changes	194
5.5	Conclusions	196
5.6	References	196
6.	Fuel Preparation	199
6.1	Know Your Fuel	200
6.1.1	Fuel Types	200
6.1.2	Fuel Issues	201
6.1.3	Coal	202
6.1.4	Petroleum-Based Products	204
6.1.5	Biomass	205
6.2	Fuel Storage Silo	206
6.2.1	Storage Capacity	206
6.2.2	Silo/Bunker Design Considerations	208
6.2.3	Safety Considerations	211
6.3	Solid Fuel Flow Control	211
6.4	Fuel Sizing Equipment	214
6.5	Pulverized Coal System Analysis Guidelines	225
6.5.1	Mill Sizing and Standard Ratings	226
6.5.2	Coal Mill Capacity and Capability Analysis	229
6.5.2.1	Coal Throughput Capability	230
6.5.2.2	Primary Air Capability	232
6.5.2.3	Air Heater Leakage	232
6.5.2.4	Thermal Requirements	234
6.5.2.5	Analysis Summary	237
6.5.3	Coal Mill Capability Test Plan	237
6.6	References	239
7.	Conventional Firing Systems	241
7.1	Overview	241
7.2	Types of Traditional Combustion Systems	242
7.2.1	Stoker Firing Systems	242
7.2.2	Pulverized Firing Systems	242
7.2.3	Cyclone Firing Systems	243
7.2.4	Fluidized-Bed Systems	243
7.3	Applications and Uses of Conventional Firing Systems	243
7.3.1	Electricity Generation	243
7.3.2	Industrial Boilers, Kilns, and Process Heaters	246
7.4	Basic Issues	247
7.4.1	Fuel Selection	247

7.4.2	Operational Considerations	249
7.4.3	Airborne Emissions	250
7.4.3.1	Particulates	250
7.4.3.2	SO ₂	250
7.4.3.3	NO _x	250
7.4.3.4	CO ₂	251
7.4.3.5	Other Emissions (Hazardous Air Pollutants)	251
7.5	Firing Systems and Combustion Issues	252
7.5.1	Stoker Firing	252
7.5.1.1	Basic Description and Identification of Types	252
7.5.1.2	Fuel Selection for Stokers	253
7.5.1.3	Fuel Preparation	254
7.5.1.4	Design Parameters	254
7.5.1.5	Functioning of Grates	255
7.5.2	Pulverized Firing	256
7.5.2.1	Applications	256
7.5.2.2	Basic Description and Identification of Types	257
7.5.2.3	Wall-Fired Pulverized Coal Boilers and Firing Systems	257
7.5.2.4	Tangentially Fired Pulverized Coal Boilers	262
7.5.2.5	Vertically Fired (Arch-Fired) Boilers	264
7.5.2.6	Pulverized Coal Burner Systems	264
7.5.2.7	Typical and Maximum Conditions	265
7.5.2.8	Fuel Preparation	265
7.5.2.9	Effect of Moisture	267
7.5.2.10	Swirling Flow	267
7.5.2.11	Overfire Air Systems as Burner-Based Emissions Control	267
7.5.3	Cyclone Firing	268
7.5.3.1	Basic Description and Identification of Types	268
7.5.3.2	Typical and Maximum Conditions	269
7.5.3.3	NO _x Formation and Cyclones	269
7.5.3.4	Design and Operating Parameters	269
7.6	Concluding Statements	271
7.7	References	272
8.	Fluidized-Bed Firing Systems	275
8.1	Introduction	275
8.2	Fluidized-Bed Combustion Systems	276
8.2.1	Bubbling Fluidized-Bed Combustion (BFBC)	278

8.2.2	Circulating Fluidized-Bed Combustion (CFBC)	280
8.2.3	Pressurized Fluidized-Bed Combustion (PFBC)	282
8.3	Heat Transfer	283
8.4	Combustion Efficiency	284
8.5	Fuel Flexibility	284
8.6	Pollutant Formation and Control	288
8.6.1	Sulfur Dioxide	289
8.6.1.1	Transformation of Sorbents in the FBC Process	289
8.6.1.2	Bed Temperature	291
8.6.1.3	Particle Residence Time	292
8.6.1.4	Bed Quality	292
8.6.1.5	Gaseous Environment	292
8.6.1.6	Combustor Pressure	292
8.6.1.7	Chemical Composition	293
8.6.1.8	Porosity	293
8.6.1.9	Surface Area	294
8.6.1.10	Particle Size	294
8.6.2	Nitrogen Oxides	295
8.6.2.1	NO _x Formation	295
8.6.2.2	Fuel Nitrogen and Volatile Matter Content: Fuel Rank	296
8.6.2.3	Combustion Temperature	296
8.6.2.4	Excess Air	297
8.6.2.5	Gas Velocity/Residence Time	297
8.6.2.6	Limestone Effects	297
8.6.2.7	NO _x Reduction Techniques	297
8.6.3	Particulate Matter	298
8.6.4	Carbon Monoxide/Hydrocarbons	298
8.6.5	Trace Elements	299
8.7	Ash Chemistry and Agglomeration Issues	301
8.7.1	Chemical Fractionation of Biomass	303
8.7.1.1	Results of the Chemical Fractionation Study	304
8.7.2	Thermodynamic Modeling to Predict Inorganic Phases	311
8.7.3	Viscosity of Inorganic Melt Phases	316
8.7.3.1	Viscosity Results	319
8.7.4	Conclusions	320
8.8	FBC Boilers and Their Role in Clean Coal Technology Development	321
8.8.1	United States	322
8.8.1.1	Clean Coal Technology Development Program (CCTDP)	322
8.8.1.2	Clean Coal Power Initiative	324

8.8.2	Worldwide	324
8.8.3	Further Developments Needed for Conventional Clean Coal Technologies	325
8.9	Unique Opportunities for FBCs	325
8.9.1	Background of Opportunity/Food Industry Issue	326
8.9.2	Disposal Options	328
8.9.3	Cofiring ATB in Coal-Fired Boilers for Carcass Disposal	329
8.9.4	Summary of ATB/Coal Cofiring in a Pilot-Scale Fluidized Bed Combustor	329
8.9.4.1	NCBA/Cargill Food Solutions Tests	330
8.9.4.2	PEDA/Cargill Food Solutions Tests	332
8.9.4.3	DOE Oxygen-Enhanced Combustion Testing	332
8.9.5	Closing Statements	333
8.10	References	333
9.	Post-Combustion Emissions Control	341
9.1	Introduction	341
9.2	Particulate Capture	341
9.2.1	Introduction	341
9.2.2	Electrostatic Precipitation	342
9.2.2.1	Introduction	342
9.2.2.2	Theory	343
9.2.2.3	Equipment Arrangement	345
9.2.2.4	Resistivity	346
9.2.2.5	Process Control	347
9.2.2.6	Operating an Electrostatic Precipitator	351
9.2.2.7	Diagnostics	356
9.2.2.8	Resistivity Conditioning	360
9.2.3	Baghouse/Fabric Filters	361
9.2.3.1	Overview	361
9.2.3.2	Basic Principles	362
9.2.3.3	Specific Designs	363
9.2.3.4	Collection Efficiency	365
9.2.3.5	Conclusions	366
9.3	Acid Gas Control	366
9.3.1	Acid Gases of Importance: SO ₂ , HCl	366
9.3.2	Array of Technologies Depending on Application	367
9.3.3	Wet Scrubber Technology	367
9.3.3.1	Basic Principles	367
9.3.3.2	Typical Designs/Scale of Operations	367
9.3.3.3	Efficiencies	369

9.3.4	Spray Dryer Absorbers	369
9.3.4.1	Basic Principles	369
9.3.4.2	Typical Designs/Scale of Operation	369
9.3.4.3	Efficiencies	370
9.3.4.4	Waste Streams	371
9.3.5	Dry Injection Systems	371
9.3.5.1	Basic Principles	371
9.3.5.2	Typical Designs/Scale of Operations	372
9.3.5.3	Efficiencies	372
9.3.6	Reactions	372
9.3.6.1	Kinetics and Thermodynamics	374
9.4	NO _x Control	376
9.4.1	Introduction	376
9.4.2	Post-Combustion Technologies of Significance	377
9.4.2.1	Selective Noncatalytic Reduction (SNCR)	377
9.4.2.2	Selective Catalytic Reduction (SCR)	378
9.5	Mercury Control	380
9.5.1	Mercury Emissions from Existing Control Technologies from Coal-Fired Power Plants	380
9.5.2	Mercury Legislation	383
9.5.3	Technologies for Mercury Control	383
9.5.3.1	Sorbent Injection	384
9.5.3.2	Wet Flue Gas Desulfurization	388
9.6	Carbon Dioxide Capture	389
9.6.1	Introduction	389
9.6.2	Approaches for Capturing Carbon Dioxide from Coal-Fired Power Plants	389
9.6.3	Post-Combustion Carbon Dioxide Scrubbing	389
9.7	References	390
10.	Some Computer Applications for Combustion Engineering with Solid Fuels	393
10.1	Introduction	393
10.1.1	Computer Applications in Combustion Engineering	394
10.1.1.1	Analytical Modeling	394
10.1.1.2	Computer Applications for Process Control	396
10.1.1.3	Computer Applications for Fuel Control	396
10.2	Background	396
10.3	Process for Fuels Opportunity Realization	397
10.3.1	Identify Current Fuels Opportunities	397

10.3.2	Validate Objectives and Develop Effective Design	399
10.4	Successfully Applying Computer Technology to Fuels Control	403
10.5	AccuTrack Situation Challenges and Response	408
10.6	Modeling the Flow of Coal in Bunkers and Silos	410
10.6.1	Plug Flow Models	410
10.6.2	Discrete Element Modeling (DEM)	410
10.6.3	Void Model	411
10.6.4	Stochastic Model	411
10.6.5	Bunker Geometry	412
10.6.6	Validation of Bunker Modeling	415
10.7	Conclusions Regarding the AccuTrack Approach to Computer Management of Fuel Properties	420
10.8	Summary	421
11.	Gasification	423
11.1	Introduction to Gasification	423
11.2	Gasification Theory	424
11.3	Features of Gasification Systems	427
11.3.1	Bed Type	427
11.3.2	Flow Direction	430
11.3.3	Feed Preparation	430
11.3.4	Operating Temperature	431
11.3.5	Oxidant	432
11.3.6	Reactor Containment	433
11.3.7	Primary Syngas Cooling	433
11.3.8	Primary Gas Cleaning	435
11.3.9	Fuel Issues	435
11.4	Commercial Gasification Systems	436
11.4.1	GE Energy (formerly Texaco)	436
11.4.2	Shell	436
11.4.3	E-Gas (ConocoPhillips)	439
11.4.4	Siemens (formerly Future Energy GSP)	439
11.4.5	KBR Transport Gasifier	441
11.4.6	Lurgi	442
11.4.7	Raw Gas Analysis	443
11.5	Trace Components in Gasifier Syngas	443
11.5.1	Sulfur Compounds	443
11.5.2	Nitrogen Compounds	444
11.5.3	Chlorine Compounds	444
11.5.4	Unsaturated Hydrocarbons	444
11.5.5	Oxygen	444

11.5.6	Formic Acid	445
11.5.7	Carbon	445
11.5.8	Metal Carbonyls	445
11.5.9	Mercury	445
11.5.10	Arsenic	446
11.6	Gas Treating	446
11.6.1	Introduction	446
11.6.2	Desulfurization	447
11.6.3	Chemical Solvent Processes	448
11.6.3.1	Amine Processes	448
11.6.4	Physical Solvent Processes	448
11.6.4.1	Physical Washes	448
11.6.4.2	Selexol	449
11.6.4.3	Rectisol	450
11.6.4.4	Liquid Redox Processes	453
11.6.5	Membranes	453
11.6.6	COS Hydrolysis	453
11.6.7	CO Shift	454
11.6.7.1	Clean Gas Shift	455
11.6.7.2	Raw Gas Shift	456
11.6.8	Mercury Removal	457
11.7	Complete Systems	457
11.7.1	Integrated Gasification-Combined Cycle (IGCC)	457
11.7.1.2	Gasification Block	459
11.7.1.3	Gas Treatment and Sulfur Recovery	460
11.7.1.4	Combined Cycle Power Plant	461
11.7.2	IGCC with Carbon Capture	462
11.7.3	Methanol	462
11.8	Benefits and Limits of Gasification	464
11.8.1	Efficiency	464
11.8.2	Environmental Impact	464
11.8.2.1	Sulfur Emissions	465
11.8.2.2	NO _x Emissions	465
11.8.2.3	Mercury	465
11.8.2.4	Other Emissions	465
11.8.2.5	Start-Up Emissions	465
11.8.3	Availability	466
11.8.4	Capital Requirements	466
11.9	References	467
12.	Policy Considerations for Combustion Engineering	469
12.1	Introduction	469
12.1.1	Combustion Engineers Do Not Make Policy	471
12.1.2	Combustion Engineers Respond to Policy	472

12.2	Environmental Policy and the Engineering Response	473
12.2.1	A Historical Perspective	474
12.2.2	Environmental Policy and Legislation Since 1990	474
12.2.3	Mechanisms of Engineering Response to Environmental Policy	477
12.3	Energy Policy and Combustion Engineering	480
