

CONTENTS

Preface xvii

Chapter 1: Explaining Behavior 1

- What Is Science, and What Do Scientists Do? 2
 - Science as a Way of Thinking 3
 - How Do Scientists Do Science? 4
 - Basic and Applied Research 4
 - Framing a Problem in Scientific Terms 5
- Learning About Research: Why Should You Care? 6
- Exploring the Causes of Behavior 7
- Explaining Behavior 9
 - Science, Protoscience, Nonscience, and Pseudoscience 9
 - Scientific Explanations 11
 - Commonsense Explanations Versus Scientific Explanations 14
 - Belief-Based Explanations Versus Scientific Explanations 16
- When Scientific Explanations Fail 18
 - Failures Due to Faulty Inference 18
 - Pseudoexplanations 19
- Methods of Inquiry 21
 - The Method of Authority 21
 - The Rational Method 22
 - The Scientific Method 23
 - The Scientific Method at Work: Using a Cell Phone While Walking 25
 - The Steps of the Research Process 26
- Summary 29
- Key Terms 31

Chapter 2: Developing and Evaluating Theories of Behavior 32

- What Is a Theory? 32
 - Theory Versus Hypothesis 33
 - Theory Versus Law 34

Theory Versus Model	35
Mechanistic Explanations Versus Functional Explanations	37
Classifying Theories	38
Is the Theory Quantitative or Qualitative?	38
At What Level of Description Does the Theory Operate?	39
What Is the Theory's Domain?	43
Roles of Theory in Science	43
Understanding	43
Prediction	44
Organizing and Interpreting Research Results	44
Generating Research	44
Characteristics of a Good Theory	46
Ability to Account for Data	46
Explanatory Relevance	46
Testability	46
Prediction of Novel Events	47
Parsimony	47
Strategies for Testing Theories	48
Following a Confirmational Strategy	48
Following a Disconfirmational Strategy	48
Using Confirmational and Disconfirmational Strategies Together	49
Using Strong Inference	49
Theory-Driven Versus Data-Driven Research	50
Summary	54
Key Terms	55

Chapter 3: Getting Ideas for Research 56

Sources of Research Ideas	57
Experience	57
Theory	60
Applied Issues	61
Developing Good Research Questions	63
Asking Answerable Questions	63
Asking Important Questions	64
Developing Research Ideas: Reviewing the Literature	65
Reasons for Reviewing the Scientific Literature	66
Sources of Research Information	66
Performing Library Research	73
The Basic Strategy	74
Using PsycINFO	74
Using PsycARTICLES	77
General Internet Resources	77

Computer Searching for Books and Other Library Materials	77
Reading a Research Report	78
Obtaining a Copy	78
Reading the Literature Critically	79
Factors Affecting the Quality of a Source of Research Information	84
Publication Practices	84
Statistical Significance	84
Consistency With Previous Knowledge	87
Significance of the Contribution	88
Editorial Policy	88
Peer Review	89
Values Reflected in Research	92
Developing Hypotheses	95
Summary	96
Key Terms	98

Chapter 4: Choosing a Research Design 99

Functions of a Research Design	99
Causal Versus Correlational Relationships	100
Correlational Research	101
An Example of Correlational Research: Cell Phone Use and Accidents	102
Behavior Causation and the Correlational Approach	102
Why Use Correlational Research?	103
Experimental Research	105
Characteristics of Experimental Research	106
An Example of Experimental Research: Cell Phone Use While Driving	108
Strengths and Limitations of the Experimental Approach	109
Experiments Versus Demonstrations	110
Internal and External Validity	111
Internal Validity	111
External Validity	115
Internal Versus External Validity	117
Research Settings	117
The Laboratory Setting	118
The Field Setting	119
A Look Ahead	120
Summary	120
Key Terms	122

Chapter 5: Making Systematic Observations 123

Deciding What to Observe	123
Choosing Specific Variables for Your Study	124

Research Tradition	124
Theory	124
Availability of New Techniques	125
Availability of Equipment	125
Choosing Your Measures	126
Reliability of a Measure	126
Accuracy of a Measure	128
Validity of a Measure	129
Acceptance as an Established Measure	130
Scale of Measurement	131
Variables and Scales of Measurement	133
Choosing a Scale of Measurement	134
Adequacy of a Dependent Measure	137
Tailoring Your Measures to Your Research Participants	139
Types of Dependent Variables and How to Use Them	141
Choosing When to Observe	144
The Reactive Nature of Psychological Measurement	145
Reactivity in Research with Human Participants	145
Demand Characteristics	146
Other Influences	147
The Role of the Experimenter	148
Reactivity in Research with Animal Subjects	152
Automating Your Experiments	153
Detecting and Correcting Problems	154
Conducting a Pilot Study	154
Adding Manipulation Checks	155
Summary	155
Key Terms	157

Chapter 6: Choosing and Using Research Subjects 158

General Considerations	158
Populations and Samples	159
Sampling and Generalization	160
Nonrandom Sampling	161
Is Random Sampling Always Necessary?	164
Acquiring Human Participants for Research	164
The Research Setting	164
The Needs of Your Research	166
Institutional Policies and Ethical Guidelines	166
Voluntary Participation and Validity	167
Factors That Affect the Decision to Volunteer	167
Volunteerism and Internal Validity	170
Volunteerism and External Validity	171
Remedies for Volunteerism	172

Research Using Deception	173
Research Deception in Context	174
Types of Research Deception	175
Problems Involved in Using Deception	175
Solutions to the Problem of Deception	177
Considerations When Using Animals as Subjects in Research	182
Contributions of Research Using Animal Subjects	182
Choosing Which Animal to Use	183
Why Use Animals?	183
How to Acquire Animals for Research	184
Generality of Animal Research Data	184
The Animal Rights Movement	186
Animal Research Issues	187
Alternatives to Animals in Research: In Vitro Methods and Computer Simulation	190
Summary	191
Key Terms	192

Chapter 7: Understanding Ethical Issues in the Research Process 193

Ethical Research Practice With Human Participants	193
John Watson and Little Albert	193
Is It Fear or Is It Anger?	195
Putting Ethical Considerations in Context	195
The Evolution of Ethical Principles for Research With Human Participants	196
The Nuremberg Code	196
The Declaration of Helsinki	197
The Belmont Report	197
APA Ethical Guidelines	198
Government Regulations	198
Internet Research and Ethical Research Practice	201
Ethical Guidelines, Your Research, and the Institutional Review Board	205
Ethical Considerations When Using Animal Subjects	207
The Institutional Animal Care and Use Committee	208
Cost-Benefit Assessment: Should the Research Be Done?	209
Treating Science Ethically: The Importance of Research Integrity and the Problem of Research Fraud	210
What Constitutes Fraud in Research?	212
The Prevalence of Research Fraud	212
Explanations for Research Fraud	213
Dealing With Research Fraud	214
Summary	216
Key Terms	218

Chapter 8: Using Nonexperimental Research 219

- Conducting Observational Research 219
 - An Example of Observational Research: Are Children Really Cruel? 219
 - Developing Behavioral Categories 220
 - Quantifying Behavior in an Observational Study 221
 - Recording Single Events or Behavior Sequences 222
 - Coping With Complexity 222
 - Establishing the Reliability of Your Observations 225
 - Sources of Bias in Observational Research 230
 - Quantitative and Qualitative Approaches to Data Collection 231
- Nonexperimental Research Designs 232
 - Naturalistic Observation 232
 - Ethnography 234
 - Sociometry 239
 - The Case History 240
 - Archival Research 241
 - Content Analysis 243
- Meta-Analysis: A Tool for Comparing Results Across Studies 247
 - Step 1: Identifying Relevant Variables 248
 - Step 2: Locating Relevant Research to Review 249
 - Step 3: Conducting the Meta-Analysis 249
 - Drawbacks to Meta-Analysis 250
- Summary 253
- Key Terms 254

Chapter 9: Using Survey Research 255

- Survey Research 256
- Designing Your Questionnaire 258
 - Writing Questionnaire Items 258
 - Assembling Your Questionnaire 264
- Administering Your Questionnaire 266
 - Mail Surveys 266
 - Internet Surveys 267
 - Telephone Surveys 269
 - Group-Administered Surveys 269
 - Face-to-Face Interviews 270
 - Mixed-Mode Surveys 271
 - A Final Note on Survey Techniques 271
- Assessing the Reliability of Your Questionnaire 272
 - Assessing Reliability by Repeated Administration 272
 - Assessing Reliability With a Single Administration 273
 - Increasing Reliability 274
- Assessing the Validity of Your Questionnaire 274

Acquiring a Sample for Your Survey	275
Representativeness	276
Sampling Techniques	276
Random and Nonrandom Sampling Revisited	283
Sample Size	284
Summary	285
Key Terms	287

Chapter 10: Using Between-Subjects and Within-Subjects Experimental Designs 288

Types of Experimental Design	288
The Problem of Error Variance in Between-Subjects and Within-Subjects Designs	289
Sources of Error Variance	289
Handling Error Variance	291
Between-Subjects Designs	292
The Single-Factor Randomized-Groups Design	292
Matched-Groups Designs	297
Within-Subjects Designs	300
An Example of a Within-Subjects Design: Does Caffeine Keep Us Going?	302
Advantages and Disadvantages of the Within-Subjects Design	302
Sources of Carryover	304
Dealing With Carryover Effects	305
When to Use a Within-Subjects Design	310
Within-Subjects Versus Matched-Groups Designs	312
Types of Within-Subjects Designs	312
Factorial Designs: Designs With Two or More Independent Variables	314
An Example of a Factorial Design: Can That Witness Really <i>Not</i> Remember an Important Event?	315
Main Effects and Interactions	317
Factorial Within-Subjects Designs	318
Higher-Order Factorial Designs	320
Other Group-Based Designs	321
Designs With Two or More Dependent Variables	321
Confounding and Experimental Design	322
Summary	323
Key Terms	325

Chapter 11: Using Specialized Research Designs 326

Combining Between-Subjects and Within-Subjects Designs	326
The Mixed Design	326
The Nested Design	328

Combining Experimental and Correlational Designs	331
Including a Covariate in Your Experimental Design	331
Including Quasi-Independent Variables in an Experiment	332
An Example of a Combined Design: Is Coffee a Physical or Psychological Stimulant?	332
Quasi-Experimental Designs	335
Time Series Designs	335
Equivalent Time Samples Design	336
Advantages and Disadvantages of Quasi Experiments	337
Nonequivalent Control Group Design	338
Pretest–Posttest Designs	339
Problems With the Pretest–Posttest Design	340
The Solomon Four-Group Design	342
Eliminating the Pretest	343
Developmental Designs	344
The Cross-Sectional Design	344
The Longitudinal Design	346
The Cohort-Sequential Design	349
Summary	350
Key Terms	352

Chapter 12: Using Single-Subject Designs 353

A Little History	353
Baseline, Dynamic, and Discrete Trials Designs	355
Baseline Designs	356
An Example Baseline Experiment: Do Rats Prefer Signaled or Unsignaled Shocks?	357
Issues Surrounding the Use of Baseline Designs	359
Dealing With Uncontrolled Variability	363
Determining the Generality of Findings	365
Dealing With Problem Baselines	366
Types of Single-Subject Baseline Design	368
Dynamic Designs	377
Discrete Trials Designs	379
Characteristics of the Discrete Trials Design	380
Analysis of Data from Discrete Trials Designs	382
Inferential Statistics and Single-Subject Designs	383
Advantages and Disadvantages of the Single-Subject Approach	383
Summary	385
Key Terms	387

Chapter 13: Describing Data 388

- Descriptive Statistics and Exploratory Data Analysis 388
- Organizing Your Data 389
 - Organizing Your Data for Computer Entry 393
 - Entering Your Data 393
- Graphing Your Data 395
 - Elements of a Graph 395
 - Bar Graphs 396
 - Line Graphs 397
 - Scatter Plots 399
 - Pie Graphs 400
 - The Importance of Graphing Data 400
- The Frequency Distribution 401
 - Displaying Distributions 401
 - Examining Your Distribution 403
- Descriptive Statistics: Measures of Center and Spread 405
 - Measures of Center 405
 - Measures of Spread 409
 - Boxplots and the Five-Number Summary 411
- Measures of Association, Regression, and Related Topics 413
 - The Pearson Product-Moment Correlation Coefficient 413
 - The Point-Biserial Correlation 416
 - The Spearman Rank-Order Correlation 416
 - The Phi Coefficient 416
 - Linear Regression and Prediction 417
 - The Coefficient of Determination 419
 - The Correlation Matrix 420
 - Multivariate Correlational Techniques 421
- Summary 421
- Key Terms 423

Chapter 14: Using Inferential Statistics 424

- Inferential Statistics: Basic Concepts 424
 - Sampling Distribution 424
 - Sampling Error 425
 - Degrees of Freedom 425
 - Parametric Versus Nonparametric Statistics 425
- The Logic Behind Inferential Statistics 426
 - Statistical Errors 428
 - Statistical Significance 429
 - One-Tailed Versus Two-Tailed Tests 430

Parametric Statistics	432
Assumptions Underlying a Parametric Statistic	432
Inferential Statistics with Two Samples	432
The t Test	433
An Example from the Literature: Contrasting Two Groups	434
The z Test for the Difference Between Two Proportions	435
Beyond Two Groups: Analysis of Variance (ANOVA)	436
The One-Factor Between-Subjects ANOVA	437
The One-Factor Within-Subjects ANOVA	441
The Two-Factor Between-Subjects ANOVA	442
The Two-Factor Within-Subjects ANOVA	444
Mixed Designs	445
Higher-Order and Special-Case ANOVAs	445
ANOVA: Summing Up	446
Nonparametric Statistics	446
Chi-Square	447
The Mann-Whitney U Test	449
The Wilcoxon Signed Ranks Test	450
Parametric Versus Nonparametric Statistics	450
Special Topics in Inferential Statistics	450
Power of a Statistical Test	450
Statistical Versus Practical Significance	452
The Meaning of the Level of Significance	453
Data Transformations	454
Alternatives to Inferential Statistics	455
Summary	458
Key Terms	459

Chapter 15: Using Multivariate Design and Analysis 460

Correlational and Experimental Multivariate Designs	460
Correlational Multivariate Design	461
Experimental Multivariate Design	462
Assumptions and Requirements of Multivariate Statistics	463
Linearity	463
Outliers	463
Normality and Homoscedasticity	465
Multicollinearity	466
Error of Measurement	466
Sample Size	467
Correlational Multivariate Statistical Tests	468
Factor Analysis	468
Partial and Part Correlations	470
Multiple Regression	472

Discriminant Analysis	476
Canonical Correlation	477
Experimental Multivariate Statistical Tests	478
Multivariate Analysis of Variance	478
Multiway Frequency Analysis	483
Multivariate Statistical Techniques and Causal Modeling	485
Path Analysis	485
Structural Equation Modeling	489
Multivariate Analysis: A Cautionary Note	490
Summary	491
Key Terms	493

Chapter 16: Reporting Your Research Results 494

APA Writing Style	494
Writing an APA-Style Research Report	495
Getting Ready to Write	495
Parts and Order of Manuscript Sections	497
The Title Page	498
The Abstract	499
The Introduction	500
The Method Section	504
The Results Section	507
The Discussion Section	511
The Reference Section	512
Footnotes	516
Tables	517
Figures	518
Elements of APA Style	520
Citing References in Your Report	520
Citing Quoted Material	521
Using Numbers in the Text	523
Avoiding Biased Language	524
Expression, Organization, and Style	525
Precision and Clarity of Expression	526
Economy of Expression	527
Organization	528
Style	529
Making It Work	530
Avoiding Plagiarism and Lazy Writing	532
Telling the World About Your Results	533
Publishing Your Results	533

Paper Presentations 534

The Ethics of Reporting or Publishing Your Results 536

Summary 536

Key Terms 538
