| <br><b>1 Theories and models</b>                                   | <br>5  |
| <i>Nova Corcoran</i>   |        |
| Communication defined  | 5      |
| Components of communication  | 6      |
| Factors influencing communication                                  | 7      |
| Communication in health promotion                                  | 9      |
| Models and theories overview                                       | 10     |
| Why use theoretical models?  | 12     |
| Problems associated with a theory-based approach                   | 12     |
| Theories   | 13     |
| Theory of planned behaviour  | 14     |
| Health belief model  | 15     |
| Criticisms of cognitive theories                                   | 18     |
| Transtheoretical model (or 'stages of change' model)               | 18     |
| Process of behaviour change (PoBC)                                 | 21     |
| Criticisms of stage-step theories                                  | 22     |
| Practical implications: which theoretical model?                   | 23     |
| Practical implications: getting started                            | 24     |
| The theory of planned behaviour in practice                        | 25     |
| The health belief model in practice                                | 25     |
| Application of the transtheoretical model to practice              | 26     |
| Conclusion   | 28     |
| Additional reading   | 28     |
| <br><b>2 Social and psychological factors</b>                      | <br>29 |
| <i>Nova Corcoran and Sue Corcoran</i>                              |        |
| The target group   | 30     |
| The relevance of social and psychological factors to communication | 32     |
| Social factors overview  | 33     |
| Social factors and health promotion practice                       | 37     |
| Psychological factors overview                                     | 39     |

|   |           |

| The classification and definition of disability                     | 58        |
| Labelling and stigma  | 58        |
| Health promotion – communication and language                       | 59        |
| Health care communication and disability                            | 60        |
| Defining, profiling and locating older people                       | 60        |
| Health and wellbeing  | 62        |
| Communication and barriers to working with older people             | 63        |
| Older people's health policy and health promotion                   | 65        |
| Conclusion  | 67        |
| Additional reading  | 68        |
| <b>4 Mass media</b>   | <b>69</b> |
| <i>Nova Corcoran</i>  |           |
| What is mass media?   | 69        |
| Common mass media use in health promotion                           | 73        |
| What the mass media can and cannot deliver                          | 76        |
| Creating a health campaign using mass media                         | 79        |
| Target groups and message design                                    | 81        |
| Social marketing  | 83        |
| Criticisms of social marketing                                      | 87        |
| Branding health   | 88        |
| Utilising the media for free  | 88        |
| Using incentives: fear appeals and positive appeals                 | 91        |
| Conclusion  | 92        |
| Additional reading  | 93        |
| <b>5 Information technology</b>                                     | <b>94</b> |
| <i>Nova Corcoran</i>  |           |
| The role of information technology in health                        | 95        |
| The potential of information technology in health promotion         | 96        |

|   |            |
|---|------------|
| The Internet  | 98         |
| Mobile phones   | 100        |
| Additional IT-based applications                                  | 102        |
| Advantages and disadvantages of information technology            | 103        |
| Using information technology in health promotion                  | 105        |
| Tailoring information   | 106        |
| Designing resources in information technology                     | 107        |
| Using the target group  | 107        |
| Internet advocacy   | 110        |
| Conclusion  | 111        |
| Additional reading  | 111        |
| <b>6 Using settings</b>   | <b>112</b> |
| <i>Nova Corcoran, Anthony Bone and Claire Everett</i>             |            |
| Defining settings   | 113        |
| Types of settings   | 114        |
| Main features of settings   | 115        |
| Locations of settings   | 116        |
| The advantages of using settings                                  | 118        |
| The disadvantages of using settings                               | 119        |
| Overview of settings into practice                                | 121        |
| Places of worship   | 121        |
| Universities  | 124        |
| Personal care settings  | 127        |
| Convenience stores  | 130        |
| Conclusion  | 132        |
| Additional reading  | 133        |
| <b>7 Evidence-based practice</b>                                  | <b>134</b> |
| <i>Nova Corcoran and John Garlick</i>                             |            |
| Definitions of evidence-based practice                            | 135        |
| Rationale for evidence-based practice                             | 136        |
| What evidence can be used?  | 137        |
| Where to find evidence  | 140        |
| Problems with using the evidence base                             | 143        |
| Adaptation and transferability                                    | 144        |
| How to establish an evidence base                                 | 147        |
| Using an evidence base to identify methods and strategies         | 148        |
| Conclusion  | 152        |
| Additional reading  | 152        |
| <b>8 Using evaluation</b>   | <b>153</b> |
| <i>Sue Corcoran</i>   |            |
| Defining evaluation   | 154        |
| Why evaluate communication in health promotion?                   | 155        |
| Overview of models and theories of evaluation in health promotion | 156        |

|   |            |
|---|------------|
| Formative evaluation  | 157        |
| Needs assessment  | 158        |
| Process evaluation  | 159        |
| Impact evaluation   | 160        |
| Outcome evaluation  | 161        |
| Economic evaluation   | 162        |
| Participatory evaluation  | 163        |
| Experimental design evaluation  | 163        |
| Reliability and validity  | 164        |
| Evaluating interventions using theoretical models of communication                  | 165        |
| What to measure in evaluation   | 166        |
| Evaluation of mass communication  | 168        |
| Monitoring campaigns  | 169        |
| Media analysis  | 170        |
| Evaluating online campaigns   | 170        |
| Dissemination of results  | 171        |
| Conclusion  | 173        |
| Additional reading  | 173        |
| <b>9 Bridging theory and practice – ten different health promotion campaigns</b>    | <b>174</b> |
| <i>Nova Corcoran</i>  |            |
| 1 The use of theory in a campaign: Food Dudes                                       | 175        |
| 2 The use of multi-media strategies in health promotion: Think road safety          | 175        |
| 3 A campaign that frames a health issue differently: 'Save the crabs and eat 'em'   | 175        |
| 4 A campaign that aims to teach a skill: 'Hard and fast'                            | 175        |
| 5 A campaign based on an identified knowledge gap: Chlamydia worth talking about    | 176        |
| 6 A campaign to advocate public policy changes: Are We Taking The Dis?              | 176        |
| 7 A settings-based health promotion campaign: BBHOP                                 | 176        |
| 8 A campaign that aims to change behaviour: Why Let Good Times Go Bad               | 177        |
| 9 A campaign to provide information to a specific audience: The middle age spread   | 177        |
| 10 A campaign designed to change lifestyle-related behaviour: Swap it Don't Stop it | 177        |
| <b>Activity discussions</b>   | <b>179</b> |
