List of Figures	xi
Preface	xv
Symbol List	xvii
1 Modelling of uncertain systems and the robust control problem	1
1.1 Uncertainty and robust control	1
1.2 The essential chronology of major findings into robust control	6
2 Fundamentals of stability	9
2.1 Lyapunov criteria	9
2.2 Positive definite matrices	11
2.3 Lyapunov theory for linear time-invariant systems	14
2.4 Lyapunov equations	18
2.5 Stability with uncertainty	21
2.6 Exercises	24
3 Kalman canonical decomposition	27
3.1 Introduction	27
3.2 Controllability canonical partitioning	29
3.3 Observability canonical partitioning	31
3.4 General partitioning	32
3.5 Remarks on Kalman decomposition	39
3.6 Exercises	40
4 Singular value decomposition	43
4.1 Singular values of a matrix	43
4.2 Spectral norm and condition number of a matrix	45
4.3 Exercises	50

5	Open-loop balanced realization	51
5.1	Controllability and observability gramians	51
5.2	Principal component analysis	54
5.3	Principal component analysis applied to linear systems . . .	55
5.4	State transformations of gramians	58
5.5	Singular values of linear time-invariant systems	60
5.6	Computing the open-loop balanced realization	61
5.7	Balanced realization for discrete-time linear systems	65
5.8	Exercises	67
6	Reduced order models	69
6.1	Reduced order models based on the open-loop balanced realization	70
6.1.1	Direct truncation method	71
6.1.2	Singular perturbation method	72
6.2	Reduced order model exercises	74
6.3	Exercises	77
7	Symmetrical systems	79
7.1	Reduced order models for SISO systems	79
7.2	Properties of symmetrical systems	81
7.3	The cross-gramian matrix	83
7.4	Relations between W_c^2 , W_o^2 and W_{co}	83
7.5	Open-loop parameterization	89
7.6	Relation between the Cauchy index and the Hankel matrix . .	91
7.7	Singular values for a FIR filter	92
7.8	Singular values of all-pass systems	95
7.9	Exercises	96
8	Linear quadratic optimal control	99
8.1	LQR optimal control	99
8.2	Hamiltonian matrices	105
8.3	Resolving the Riccati equation by Hamiltonian matrix . . .	109
8.4	The Control Algebraic Riccati Equation	110
8.5	Optimal control for SISO systems	111
8.6	Linear quadratic regulator with cross-weighted cost	117
8.7	Finite-horizon linear quadratic regulator	117
8.8	Optimal control for discrete-time linear systems	118
8.9	Exercises	119

9	Closed-loop balanced realization	121
9.1	Filtering Algebraic Riccati Equation	122
9.2	Computing the closed-loop balanced realization	124
9.3	Procedure for closed-loop balanced realization	125
9.4	Reduced order models based on closed-loop balanced realization	127
9.5	Closed-loop balanced realization for symmetrical systems	131
9.6	Exercises	132
10	Passive and bounded-real systems	135
10.1	Passive systems	135
10.1.1	Passivity in the frequency domain	136
10.1.2	Passivity in the time domain	141
10.1.3	Factorizing positive-real functions	143
10.1.4	Passification	143
10.1.5	Passive reduced order models	148
10.1.6	Energy considerations connected to the Positive-Real Lemma	148
10.1.7	Closed-loop stability and positive-real systems	149
10.1.8	Optimal gain for loss-less systems	150
10.2	Circuit implementation of positive-real systems	152
10.3	Bounded-real systems	153
10.3.1	Properties of bounded-real systems	156
10.3.2	Bounded-real reduced order models	157
10.4	Relationship between passive and bounded-real systems	157
10.5	Exercises	158
11	H_∞ linear control	161
11.1	Introduction	161
11.2	Solution of the H_∞ linear control problem	163
11.3	The H_∞ linear control and the uncertainty problem	168
11.4	Exercises	171
12	Linear Matrix Inequalities for optimal and robust control	173
12.1	Definition and properties of LMI	173
12.2	LMI problems	175
12.2.1	Feasibility problem	175
12.2.2	Linear objective minimization problem	176
12.2.3	Generalized eigenvalue minimization problem	176
12.3	Formulation of control problems in LMI terms	176
12.3.1	Stability	177

12.3.2	Simultaneous stabilizability	177
12.3.3	Positive real lemma	178
12.3.4	Bounded real lemma	178
12.3.5	Calculating the H_∞ norm through LMI	178
12.4	Solving a LMI problem	179
12.5	LMI problem for simultaneous stabilizability	181
12.6	Solving algebraic Riccati equations through LMI	184
12.7	Computation of gramians through LMI	187
12.8	Computation of the Hankel norm through LMI	188
12.9	H_∞ control	190
12.10	Multiobjective control	192
12.11	Exercises	198
13	The class of stabilizing controllers	201
13.1	Parameterization of stabilizing controllers for stable processes	201
13.2	Parameterization of stabilizing controllers for unstable processes	203
13.3	Parameterization of stable controllers	206
13.4	Simultaneous stabilizability of two systems	209
13.5	Coprime factorizations for MIMO systems and unitary factorization	210
13.6	Parameterization in presence of uncertainty	211
13.7	Exercises	214
	Recommended essential references	217
	Appendix A. Norms	223
	Appendix B. Algebraic Riccati Equations	227
	Index	231
