Preface.....	ix
The Author	xi
1. Basic Components	1
1.1 Semiconducting Materials and $p-n$ Junctions	1
1.2 The Transistor's Principle.....	8
1.3 Some Types of Transistors	9
1.4 Bipolar Transistor General Modes	20
1.5 Transistor Devices in Switching Mode	26
1.6 Thyristors	33
1.7 Optocouplers.....	36
1.8 Electromagnetic Relays	40
Reference	54
2. Secondary Power Supplies	55
2.1 Introduction	55
2.2 Comparative Characteristics of Linear and Switch-Mode Power Supplies	55
2.3 Problems with Electrolytic Capacitors.....	67
2.3.1 Introduction	67
2.3.2 Design Features of Aluminum Electrolytic Capacitors.....	69
2.3.3 Design Features of Tantalum Electrolytic Capacitors	80
2.4 Conclusions and Recommendations.....	85
References	87
3. Battery Chargers	89
3.1 Purpose and Modes of Operation of Battery Chargers	89
3.2 Arrangement and Principle of Operation of a Classical BC on Thyristors.....	91
3.3 BCs with a Function of Discharging the Battery.....	98
3.4 BCs with Two Rates of Output Voltage.....	101
3.5 Principle of Action of BC with a High-Frequency Link	104
3.6 Ferroresonant-Type BCs	107
3.7 Autoreclosing of a BC	111
3.8 A Problem of High Capacitance on BC Output Ports.....	117
3.9 Arrangement of Alarm about Failure of Transformers in Control Unit of BC.....	118
3.10 Problems of Electromagnetic Relays in BCs.....	120

3.11	A Device to Monitor Proper Ventilator Functionality in Sites with Batteries	124
	References	127
4.	Uninterruptable Power Supply	129
4.1	Diversity of Uninterruptable Power Supplies	129
4.2	Static Switch	131
4.3	Inverter	133
4.4	Group Powering of UPS	134
4.5	A Problem of Energy Quality in Networks with UPS	136
4.6	High-Voltage UPS Aggregate	145
4.7	Additional Problems of the UPS	148
4.8	Dynamic and Hybrid UPSs	150
	References	153
5.	Lead–Acid Accumulator Batteries	155
5.1	Background	155
5.2	Principle of Lead–Acid Accumulator Operation	157
5.3	Effect of Electrode Sulfation on Accumulator Performance	160
5.4	Classification of Lead–Acid Accumulators	161
5.5	Types of Lead–Acid Accumulator Battery Plates	162
5.6	Types of Electrolytes	167
5.7	Dry-Charged Accumulator Batteries	168
5.8	The Capacity of an Accumulator Battery	169
5.9	Selection of an Accumulator Battery	172
	References	174
6.	Systems for Supervision of Substation Battery Continuity	175
6.1	Introduction	175
6.2	Existing System for Supervision of Substation Battery Continuity	175
6.3	Suggested Method for Supervision of Substation Battery Continuity	178
6.4	Device for Supervision of Battery Circuit Based on Nonlinear Shunt	178
6.5	Using a Standard Shunt as Current Sensor	180
6.6	Using the Hall-Effect Sensor in Systems for Supervision of Battery Circuits	182
6.7	Newest Developments and Prospects of Their Application	183
6.8	Conclusion	186
	References	187
7.	Backup of Substation DC Auxiliary Power Systems	189
7.1	Characteristics of Backup Layout with Diodes	189
7.2	DPR Protection Device	191

7.3	Automatic Reclosing Device for DCAPS	193
	References	197
8.	Insulation Problems in Substation DC Auxiliary Power Supply.....	199
8.1	Faulty Actuation of Relay Protection at Grounding of One of the Poles of Auxiliary DC Power Supply	199
8.2	Insulation Problems in Substation DCAPS	202
	References	210
9.	Voltage Disturbances in Auxiliary Power Supply.....	211
9.1	Electromagnetic Disturbances in the Power Network	211
9.1.1	Blackout	211
9.1.2	Noise	211
9.1.3	Sag	212
9.1.4	Spike.....	212
9.1.5	Surge	212
9.2	Voltage Sags in AC Networks.....	213
9.2.1	Voltage Sags in Manufacturing Plant 0.4 kV Networks.....	213
9.2.2	Voltage Sags in 0.4 kV Auxiliary AC Network	218
9.3	Problematic Action of the Powerful Contactors as Changeover from Main to Reserved Auxiliary AC Power Supply on Substations	219
9.3.1	Offered Solution for the Problem	221
9.3.2	Conclusion	223
9.4	Problems in Auxiliary DC Power Supply	223
9.4.1	Problem of Power Supply of Relay Protection at Emergency Mode	223
9.5	Voltage Dips in Auxiliary Power Supply Substation Systems.....	223
	References	238
Index		241
