1		rief History of Microwave Radio Fixed Point-to-Point (Relay) munication Systems	1		
	1.1 1.2 1.3 1.4	In the Beginning, 1 Microwave Telecommunications Companies, 7 Practical Applications, 10 The Beat Goes On, 14 References, 16			
2	Regu	ulation of Microwave Radio Transmissions	20		
	2.1 2.2 2.3 2.4 2.5 2.6 2.7 2.8	Radio Frequency Management, 21 Testing for Interference, 28 Radio Paths by FCC Frequency Band in the United States, 29 Influences in Frequency Allocation and Utilization Policy within the Western Hemisphere, 30 2.4.1 United States of America (USA), 30 2.4.2 Canada, 36 FCC Fixed Radio Services, 36 Site Data Accuracy Requirements, 41 FCC Antenna Registration System (ASR) Registration Requirements, 42 Engineering Microwave Paths Near Airports and Heliports, 44 2.8.1 Airport Guidelines, 46 References, 47			
3	Mici	rowave Radio Overview	48		
	3.1 3.2 3.3	Introduction, 48 Digital Signaling, 50 Noise Figure, Noise Factor, Noise Temperature, and Front End Noise, 50			

3.4	Digital Pulse Amplitude Modulation (PAM), 53	
3.5	Radio Transmitters and Receivers, 58	
3.6	Modulation Format, 60	
3.7	QAM Digital Radios, 65	
3.8	Channel Equalization, 68	
3.9	Channel Coding, 70 Taillia Coded Madeletics (TCM), 72	
3.10	Trellis Coded Modulation (TCM), 72	
3.11 3.12	Orthogonal Frequency Division Multiplexing (OFDM), 75 Radio Configurations, 76	
3.12	3.12.1 Cross-Polarization Interference Cancellation (XPIC), 78	
3.13	Frequency Diversity and Multiline Considerations, 82	
3.14	Transmission Latency, 85	
3.15	Automatic Transmitter Power Control (ATPC), 87	
3.16	Current Trends, 87	
	3.16.1 TDM (or ATM) over IP, 87	
	3.16.2 TDM Synchronization over IP, 88	
	3.16.3 Adaptive Modulation, 89	
	3.16.4 Quality of Service (QoS) [Grade of Service (GoS) in Europe], 89	
	References, 90	
Radio	Network Performance Objectives	96
4.1 4.2	Customer Service Objectives, 96 Maintenance Objectives, 96	
4.3	Commissioning Objectives, 98	
4.4	Design Objectives, 98	
	4.4.1 Quality, 98	
	4.4.2 Availability, 98	
4.5	Differences Between North American and European Radio System Objectives, 99	
	4.5.1 North American Radio Engineering Standards (Historical	
	Bell System Oriented), 99	
	4.5.2 European Radio Engineering Standards (ITU Oriented), 99	
4.6	North American Telecommunications System Design Objectives, 100	
4.7	International Telecommunications System Design Objectives, 100	
	4.7.1 Legacy European Microwave Radio Standards, 102	
	4.7.2 Modern European Microwave Radio Standards, 102	
4.8	Engineering Microwave Paths to Design Objectives, 102	
4.9	Accuracy of Path Availability Calculations, 106	
	4.9.1 Rain Fading, 106	
	4.9.2 Multipath Fading, 106	
	4.9.3 Dispersive Fading Outage, 107	
4.10	4.9.4 Diversity Improvement Factor, 107 Impact of Flat Multipath Variability, 108	
4.11	Impact of Outage Measurement Methodology, 108	
4.12	Impact of External Interference, 109	
4.13	Conclusion, 109

A.2 Radio Transmission, 668

- A.2.1 Unit Conversions, 668
- A.2.2 Free Space Propagation Absolute Delay, 669
- A.2.3 Waveguide Propagation Absolute Delay, 669
- A.2.4 Coaxial Cable Propagation Absolute Delay, 669
- A.2.5 Free Space Propagation Wavelength, 669
- A.2.6 Dielectric Medium Propagation Wavelength, 669
- A.2.7 Free Space Loss (dB), 670
- A.2.8 Effective Radiated Power (ERP) and Effective Isotropic Radiated Power (EIRP), 670
- A.2.9 Voltage Reflection Coefficient, 670
- A.2.10 Voltage Standing Wave Ratio Maximum, 670
- A.2.11 Voltage Standing Wave Ratio Minimum, 670
- A.2.12 Voltage Standing Wave Ratio, 670
- A.2.13 Power Reflection Coefficient, 671
- A.2.14 Reflection Loss, 671
- A.2.15 Return Loss, 671
- A.2.16 Q (Quality) Factor (Figure of Merit for Resonant Circuits or Cavities), 671
- A.2.17 Q (Quality) Factor (Figure of Merit for Optical Receivers), 672
- A.2.18 Typical Long-Term Interference Objectives, 672
- A.2.19 Frequency Planning Carrier-to-Interference Ratio (C/I), 672
- A.2.20 Noise Figure, Noise Factor, Noise Temperature, and Front End Noise, 672
- A.2.21 Shannon's Formula for Theoretical Limit to Transmission Channel Capacity, 674

A.3 Antennas (Far Field), 675

- A.3.1 General Microwave Aperture Antenna (Far Field) Gain (dBi), 675
- A.3.2 General Microwave Antenna (Far Field) Relative Gain (dBi), 675
- A.3.3 Parabolic (Circular) Microwave Antenna (Far Field) Gain (dBi), 675
- A.3.4 Parabolic (Circular) Microwave Antenna Illumination Efficiency, 676
- A.3.5 Panel (Square) Microwave Antenna (Far Field) Gain (dBi), 676
- A.3.6 Panel (Square) Microwave Antenna Illumination Efficiency, 676
- A.3.7 Angle Between Incoming and Outgoing Radio Signal Paths, C, for a Passive Reflector, 677
- A.3.8 Signal Polarization Rotation Through a Passive Reflector, $\Delta \phi$, 678
- A.3.9 Signal Effects of Polarization Rotation, 678
- A.3.10 Passive Reflector (Far Field) Two-Way (Reception and Retransmission)
 Gain (dBi), 678
- A.3.11 Rectangular Passive Reflector 3-dB Beamwidth (Degrees, in Horizontal Plane), 678
- A.3.12 Elliptical Passive Reflector 3-dB Beamwidth (Degrees), 679
- A.3.13 Circular Parabolic Antenna 3-dB Beamwidth (Degrees), 679
- A.3.14 Passive Reflector Far Field Radiation Pattern Envelopes, 680
- A.3.15 Inner Radius for the Antenna Far-Field Region, 681
