Preface

vii

1. Introduction to Wind Energy Technology	1.1
1.1 Introduction	1.1
1.2 Wind Turbine	1.3
1.3 Major Components of a Typical Wind Turbine	1.4
1.4 Classification of Wind Turbines	1.6
1.5 Mechanical Pitch Control	1.7
1.6 Pitch Power Control	1.7
1.7 Stall Control	1.8
1.8 Combined Pitch-stall Control	1.8
1.9 Flap Power Control	1.9
1.10 Yaw Control	1.9
1.11 Electrical Braking	1.9
1.12 Mechanical Braking	1.9
1.13 Furling Systems	1.10
1.14 Possible Scope of Future Use	1.11
1.15 New Work	1.12
1.16 Summary	1.21
<i>References</i>	<i>1.23</i>
2. Technological Development of Wind Turbines	2.1
2.1 Introduction	2.1
2.2 Wind Turbine Technology	2.2
2.3 Major Gaps (R & D and Implementation)	2.6
2.4 Development of HAWT and VAWT	2.8
2.5 Future Technological Developments	2.16
2.6 Conclusion	2.17
<i>References</i>	<i>2.17</i>

3. Aerodynamics and Design of WECS	3.1
3.1 Introduction	3.1
3.2 Aerodynamic Principles	3.1
3.3 Aerodynamic Design of Wind Turbines	3.3
3.4 Betz Optimum Efficiency for Windmills	3.5
3.5 Conclusions	3.9
<i>References</i>	3.10
4. Generators and Control Aspects of WECS	4.1
4.1 Introduction	4.1
4.2 Wind Electric Generator	4.1
4.3 Control Systems	4.4
4.4 Isolated Wind-diesel Hybrid System	4.11
4.5 DC or AC?	4.14
4.6 Conclusions	4.15
<i>References</i>	4.16
5. Wind Resource Assessment and Power Estimation using ANN	5.1
5.1 Introduction	5.1
5.2 Wind Resource Assessment Technology	5.2
5.3 Wind Power Estimation using ANN	5.10
5.4 Conclusions	5.16
<i>References</i>	5.16
6. Wind Energy: A Ray of Hope in Rural Areas	6.1
6.1 Introduction	6.1
6.2 Small Wind Systems for Battery Charging	6.1
6.3 Wind Power Expansion	6.4
6.4 Case Study of India	6.9
6.5 Conclusions	6.16
<i>References</i>	6.16
7. New Horizons for Offshore Wind Energy: A Turn for the Better	7.1
7.1 Introduction	7.1
7.2 Offshore Winds	7.2
7.3 Development of Offshore Wind Energy	7.5
7.4 Impacts on the Environment	7.10
7.5 Reasons for Siting Wind Turbines Offshore	7.11
7.6 Conclusions	7.12
<i>References</i>	7.13

8. Generator Configuration and Power Electronics Interface	8.1
8.1 Introduction	8.1
8.2 Generators and Topologies	8.1
8.3 Synchronous Generators	8.5
8.4 Induction Generators	8.7
8.5 Advantages and Disadvantages of Induction Generator	8.9
8.6 State of the Art	8.10
8.7 Introduction to Power Electronics	8.13
8.8 AC-DC Converter	8.15
8.9 DC-DC Converter	8.16
8.10 DC-AC Converter	8.17
8.11 Bi-directional Back-to-back Two-level Inverter	8.19
8.12 Unidirectional Power Converter	8.20
8.13 Others	8.23
<i>References</i>	8.23
9. Power Quality Issues and Standards for Wind Energy Conversion System	9.1
9.1 Introduction	9.1
9.2 Factors with Relevant Impact on the Power Quality of Wind Power Plants	9.3
9.3 Power Quality Standards, Issues and its Consequences	9.4
9.4 Partial Steps of the Design Evaluation	9.7
9.5 Wind Energy Standards and Documents	9.8
9.6 Additional Features to Increase Power Quality	9.11
9.7 Summary and Conclusions	9.12
<i>References</i>	9.12
10. Reactive Power Compensation Schemes for Induction Generator Based Wind Energy Systems	10.1
10.1 Introduction	10.1
10.2 Reactive Power Compensation	10.2
10.3 Induction Generator Wind Power Plants	10.4
10.4 Types of Reactive Power Compensation	10.6
10.5 Series Compensation Devices	10.10
10.6 Shunt and Series Compensation Devices	10.11
10.7 Summary	10.13
<i>References</i>	10.13

11. Doubly-Fed Configuration in Wind Energy Conversion System	11.1
11.1 Introduction	11.1
11.2 Fundamentals of Wind Energy Conversion System	11.1
11.3 Doubly-fed Induction Generator for WECS	11.3
11.4 Voltage Source Converter	11.4
11.5 Grid Side Converter	11.4
11.6 DFIG Modelling using Dynamic Vector Approach	11.5
11.7 PWM Voltage Source Inverter Model	11.6
11.8 PWM Rectifier Model	11.7
11.9 Vector or Field Oriented Control Theory	11.7
11.10 D-Q Theory	11.7
11.11 Control of Supply Side Converter	11.8
11.12 Control of Rotor Side Converter	11.8
11.13 Summary	11.10
<i>References</i>	<i>11.10</i>
12. Offshore Wind Energy Conversion System and its Indian Scenario	12.1
12.1 Abstract	12.1
12.2 Introduction	12.1
12.3 Offshore Wind Energy System	12.2
12.4 Onshore Wind Energy System	12.4
12.5 Comparison of Onshore and Offshore Wind Energy System	12.7
12.6 Summary	12.11
<i>References</i>	<i>12.12</i>
13. Policies and Subsidies for Indian Wind Energy Technology Development	13.1
13.1 Introduction	13.1
13.2 Notable Points of Indian Government Policy	13.6
13.3 Critical Analysis of Renewable Policies and Suggestions	13.7
13.4 Subsidies	13.9
13.5 Grid Interactive Power Generation	13.10
13.6 Wind Power	13.10
13.7 Conclusion	13.11
<i>References</i>	<i>13.11</i>
14. Modelling of Grid Connected Induction Generator Wind Farm in Matlab/Simulink	14.1
14.1 Summary	14.1

14.2	Scope of the Model	14.1
14.3	Layout of the Chapter	14.1
14.4	Wind Farm Model	14.3
14.5	Modelling Notes and Assumptions	14.9
14.6	Results	14.12
14.7	Conclusion and Future Work	14.22
	<i>References</i>	<i>14.22</i>
15.	Modelling of Full Scale Converter Fed Induction Generator Wind Farm in Matlab/Simulink	15.1
15.1	Summary	15.1
15.2	Scope of the Model	15.1
15.3	Layout of the Chapter	15.1
15.4	Wind Farm Model	15.3
15.5	Modelling Notes and Assumptions	15.14
15.6	Results	15.15
15.7	Conclusion and future work	15.28
	<i>References</i>	<i>15.30</i>
	<i>Index</i>	<i>1.1</i>
