Foreword	xiii
Preface	xv
Contributors	xvii

## Chapter 1 Fundamentals of the Microscope

<b>Introduction</b>	<b>3</b>
<b>Fluorescence Microscopy: A Concise Guide to Current Imaging Methods</b>	<b>5</b>
Introduction	5
Wide-Field Fluorescence Microscopy (WFFM) Techniques	6
Modern Confocal Microscopy	9
Total Internal Reflection Fluorescence (TIRF) Microscopy	12
Two-Photon Fluorescence Microscopy (TPFM)	14
Stimulated Emission Depletion (STED) Fluorescence Microscopy	16
Final Considerations	18
Acknowledgements	19
Literature Cited	19
<b>Microscope Objectives</b>	<b>21</b>
Introduction	21
Image Fidelity	21
Properties of Microscope Objectives	25
Construction and Types of Microscope Objectives	26
Modern Objectives	28
Objectives for Other Microscopy Applications	32
Other Considerations in Choosing Objectives	33
Literature Cited	34
Key References	34
Internet Resources	34
<b>Light Microscopy Digital Imaging</b>	<b>35</b>
History of Microscopy Image Capture	35
Solid-State Sensors	35
Spectral Sensitivity of Sensors	37
Camera Noise	38
Coupling Digital Cameras to Microscopes	40
Color Imaging	42
Camera and Sensor Characteristics	43
Modes of Image Capture	44
Microscope Optimization for Digital Imaging	45
Care and Maintenance	45
Key References	47
<b>Optical Filters for Wavelength Selection in Fluorescence Instrumentation</b>	<b>49</b>
Introduction	49
Optical Thin-Film Interference Filters	49
Optical Filter Configurations in Fluorescence Instruments	52
Fluorescence Filters Impact Optical System Performance	63
Tunable Optical Filters	71
Conclusion	75
Literature Cited	76

<b>Proper Alignment and Adjustment of the Light Microscope</b>	<b>77</b>
Major Components of the Light Microscope	78
Basic Imaging and Köhler Illumination Light Paths for Bright-Field, Fluorescence, and Dark-Field Microscopy	83
Basic Imaging for Dark-Field Microscopy	85
Basic Protocol 1: Alignment for Köhler Illumination in Bright-Field, Transmitted Light Microscopy	86
Basic Protocol 2: Alignment of the Eyepieces	89
Basic Protocol 3: Alignment for Köhler Illumination in Epifluorescence Microscopy	90
Basic Protocol 4: Alignment for Phase-Contrast Microscopy	92
Basic Protocol 5: Alignment for DIC Microscopy	94
Alignment for Dark-Field Microscopy	98
Basic Protocol 6: Alignment for Low-Power Magnification Dark-Field Microscopy	99
Basic Protocol 7: Alignment for High-Power Magnification Dark-Field Illumination	100
Support Protocol 1: Matching Microscope Magnification to Detector Resolution	101
Support Protocol 2: Calibrating Image Magnification with a Stage Micrometer	102
Tests for the Optical Performance of the Microscope	103
Support Protocol 3: Testing Phase-Contrast and DIC Using Diatom Testing Slide	103
Support Protocol 4: Testing Phase-Contrast, Dark-Field, and DIC Microscopes Using a Squamous Cheek Cell Test Slide	103
Support Protocol 5: Testing Fluorescence Using a Red, Green, and Blue Fluorescent Tissue Culture Cell Test Slide	103
Support Protocol 6: Care and Cleaning of Microscope Optics	105
Commentary	106
Literature Cited	107

## **Chapter 2 Basic Methods**

<b>Introduction</b>	<b>111</b>
---------------------	------------

### **Section I Sample Preparation for Conventional Microscopy**

<b>Cryosectioning</b>	<b>113</b>
Basic Protocol: Specimen Preparation and Sectioning	113
Support Protocol 1: Tissue Fixation and Sucrose Infusion	117
Support Protocol 2: Perfusion of Adult Mice	117
Reagents and Solutions	118
Commentary	119
Literature Cited	120
<b>Immunohistochemistry</b>	<b>121</b>
Introduction	121
Basic Protocol 1: Immunofluorescent Labeling of Cells Grown as Monolayers	121
Alternate Protocol 1: Immunofluorescent Labeling of Suspension Cells	123
Basic Protocol 2: Immunofluorescent Labeling of Tissue Sections	124
Alternate Protocol 2: Immunofluorescent Labeling Using Streptavidin-Biotin Conjugates	125
Alternate Protocol 3: Immunofluorescent Double-Labeling of Tissue Sections	126
Reagents and Solutions	127
Commentary	127
Literature Cited	131

## Section II Dyes and Probes

<b>A Review of Reagents for Fluorescence Microscopy of Cellular Compartments and Structures</b>	<b>133</b>
Introduction	133
Basic Protocol 1: BacMam Constructs	136
Alternate Protocol 1: Non-Pseudo-Typed BacMam Viruses/Hard-To-Transduce Cell Types	140
Basic Protocol 2: Actin Labeling	141
Basic Protocol 3: Autophagosome Labeling by Transduction of Cells with Premo Autophagy Sensor GFP-LC3B	142
Alternate Protocol 2: Performing Autophagosome Labeling with an Antibody	143
Basic Protocol 4: Wheat Germ Agglutinin Conjugates for Plasma Membrane Labeling	145
Basic Protocol 5: Endoplasmic Reticulum and Nuclear Membrane Labeling Using ER-Tracker Reagents	145
Basic Protocol 6: Labeling Endosomes with pHrodo 10k Dextran	146
Basic Protocol 7: Labeling Golgi Apparatus Using Dye-Labeled Ceramides	147
Basic Protocol 8: Labeling Lysosomes Using LysoTracker Red DND-99	149
Basic Protocol 9: Labeling Mitochondria Using MitoTracker Red CMXRos	150
Basic Protocol 10: Labeling Nucleoli Using SYTO RNASelect Green	152
Basic Protocol 11: Labeling Peroxisomes Using CellLight BacMam 2.0 Peroxisomes-GFP	153
Alternate Protocol 3: Labeling Peroxisomes Using Antibodies	154
Basic Protocol 12: Labeling Tubulin Microtubules with TubulinTracker Green	156
Basic Protocol 13: Labeling Whole Cells or Cytoplasm with 5(6)-CFDA SE	156
Reagents and Solutions	158
Commentary	161
Literature Cited	197
Internet Resources	203
<b>The Fluorescent Protein Color Palette</b>	<b>207</b>
Introduction	207
Fluorescent Protein Brightness and Maturation	210
Phototoxicity and Photostability	212
Oligomerization	214
The Fluorescent Protein Color Palette	216
Optical Highlighter Fluorescent Proteins	232
The Future of Fluorescent Proteins	239
Literature Cited	239
<b>Photoactivation and Imaging of Optical Highlighter Fluorescent Proteins</b>	<b>247</b>
Introduction	247
Background	247
Requirements for Highlighting Fluorescent Proteins	252
Optimization Procedures	253
General Photoactivation Experiment	255
Uses of Optical Highlighter Fluorescent Proteins	256
Application of Optical Highlighter Fluorescent Proteins in Cytometry	258
Future Directions of Optical Highlighter Fluorescent Proteins	258
Acknowledgement	259
Literature Cited	259

## Section III Optical Sectioning Microscopy

<b>Basic Confocal Microscopy</b>	<b>261</b>
Introduction	261
Basis of Optical Sectioning	263
Configuration of an LSCM	265
Practical Guidelines	268
Commentary	275
Acknowledgements	278
Literature Cited	278
Key References	280
Internet Resources	280
<b>Evaluation and Purchase of an Analytical Flow Cytometer: Some of the Numerous Factors to Consider</b>	<b>283</b>
Introduction	283
Applications	285
Hardware	286
Software	288
Quality Assurance (QA)	289
Service, Support, and Company	293
Maintenance/Cleanup Protocol	294
Price	294
Recommendation from Colleagues	294
Summary and Conclusions	294
Disclaimer	295
Resources Listed	295
Acknowledgements	295
Literature Cited	295
<b>3D Deconvolution Microscopy</b>	<b>297</b>
Introduction	297
Image Formation	297
Resolution and Sampling	301
Estimating and Optimizing the PSF	302
Deblurring and Deconvolution Algorithms	303
Blind Deconvolution	306
Example Deconvolution Results	307
Deconvolution Software	309
Basic Protocol: Data Acquisition and Deconvolution Analysis	312
Concluding Remarks	315
Literature Cited	315
Key References	316
Internet Resources	316
<b>Multi-Photon Imaging</b>	<b>317</b>
Introduction	317
Multi-Photon Microscopy	317
Multi-Photon Imaging in Practice	323
Concluding Remarks	328
Literature Cited	328

## Chapter 3 Applications

<b>Introduction</b>	<b>333</b>
---------------------	------------

### Section I Basic Live Cell Imaging

<b>Building a Live-Cell Microscope: What You Need and How to Do It</b>	<b>335</b>
Defining the System	335
Building a Live-Cell Scope: Components and Considerations	337
Transmitted Light Choices	344
Summary	346

<b>Time-Lapse Microscopy Approaches to Track Cell Cycle and Lineage Progression at the Single-Cell Level</b>	<b>347</b>
Introduction	347
System Setup	348
Basic Protocol 1: Time-Lapse Acquisition Using Adherent Cells	349
Alternate Protocol 1: Time-Lapse Acquisition with Endpoint Assay to Mark S-Phase Cells	350
Alternate Protocol 2: Time-Lapse Acquisition Using Suspension Cells	351
Basic Protocol 2: Sequence Analysis for Mitosis Event or Cell Death	352
Basic Protocol 3: Data Mining—Normalized Event Distribution	353
Basic Protocol 4: Data Mining—Time-to-Event Curves	354
Basic Protocol 5: Data Mining—Duration of Mitotic Event	355
Basic Protocol 6: Data Mining—G2 Checkpoint Breaching	355
Basic Protocol 7: Data Mining—Deriving Basic Lineage Parameters	356
Commentary	356
Literature Cited	359
Internet Resources	360
<b>Analysis of Mitochondrial Dynamics and Functions Using Imaging Approaches</b>	<b>361</b>
Introduction	361
Strategic Planning	361
Basic Protocol 1: High-Resolution z-Stack and Time-Lapse Imaging of Mitochondria	363
Alternate Protocol: Imaging Mitochondrial Morphology Alterations	366
Basic Protocol 2: Fluorescence Recovery After Photobleaching on Mitochondria	367
Basic Protocol 3: Microirradiation Assay to Assess Electrical Continuity in Mitochondria	372
Support Protocol: Staining Mitochondria in Live Cells to Assess Mitochondrial Function by Imaging	375
Commentary	378
Literature Cited	382
<b>Analysis of Protein and Lipid Dynamics Using Confocal Fluorescence Recovery After Photobleaching (FRAP)</b>	<b>385</b>
Introduction	385
Basic Protocol 1: How to Set Up a FRAP Experiment	387
Basic Protocol 2: Confocal FRAP Measurements of the Lateral Diffusion of Plasma Membrane Proteins and Lipids	391
Alternate Protocol 1: Lateral Diffusion Measurements for a Rapidly Diffusing Soluble Protein	393
Alternate Protocol 2: FRAP Analysis of Intracellular Trafficking Kinetics	395
Basic Protocol 3: Working with FRAP Data	397
Basic Protocol 4: Further Analysis of FRAP Data to Obtain Diffusion Coefficients	399
Commentary	401
Acknowledgements	411
Literature Cited	411
<b>Confocal Imaging of Cell Division</b>	<b>415</b>
Introduction	415
Spinning Disk Confocal	415
Confocal Imaging of Chromosome Condensation in <i>C. elegans</i> Embryos	420
Confocal Imaging of Spindle Assembly and Chromosome Dynamics	421
Confocal Imaging of Cytokinesis	424
Discussion	425
Acknowledgements	426
Literature Cited	426

<b>Total Internal Reflection Fluorescence (TIRF) Microscopy</b>	<b>429</b>
Introduction	429
The Theory Behind the Technique	430
TIRF Objectives	432
Empirically Determining Incident Angle/Penetration Depth	434
TIRF Imaging of Plasma Membrane Receptors in Neurons	436
Multi-Wavelength TIRFM	438
Final Experimental Suggestions	441
Concluding Remarks	442
Literature Cited	442
<b>Total Internal Reflection Fluorescence (TIRF) Microscopy Illuminator for Improved Imaging of Cell Surface Events</b>	<b>445</b>
Introduction	445
Basic Protocol 1: Through-the-Objective TIRF Protocol	445
Alternate Protocol: Improved Uniformity in the Excitation Field Protocol	450
Basic Protocol 2: Through-the-Prism TIRF Protocol	452
Commentary	454
Literature Cited	465
<b>Section II   Fluorescence Resonance Energy Transfer</b>	
<b>Imaging Protein-Protein Interactions by Förster Resonance Energy Transfer (FRET) Microscopy in Live Cells</b>	<b>467</b>
Commentary	474
Literature Cited	479
<b>Imaging Protein-Protein Interactions by Fluorescence Resonance Energy Transfer (FRET) Microscopy</b>	<b>481</b>
Basic Protocol: FRET Microscopy of Fixed Cells	482
Support Protocol 1: Nuclear and Cytosolic Microinjection	485
Support Protocol 2: Protein Labeling with Cy3	487
Reagents and Solutions	490
Commentary	490
Literature Cited	496
<b>Use of Spectral Fluorescence Resonance Energy Transfer to Detect Nitric Oxide-Based Signaling Events in Isolated Perfused Lung</b>	<b>499</b>
Introduction	499
Strategic Planning	499
Basic Protocol 1: Isolating and Perfusing Mouse Lung	500
Basic Protocol 2: No-Induced Protein Modifications Detected by FRET Using Spectral Confocal Microscopy	503
Reagents and Solutions	506
Commentary	507
Literature Cited	510

## Section III Imaging of Model Systems

<b>Fluorescence Imaging Techniques for Studying <i>Drosophila</i> Embryo Development</b>	<b>513</b>
Introduction	513
Strategic Planning	514
Basic Protocol 1: Generation of Transgenic <i>Drosophila</i> for Live Fluorescence Microscopy Using the Gal4/UAS System	525
Basic Protocol 2: Preparation of <i>Drosophila</i> Embryos for Fluorescence Microscopy	529
Basic Protocol 3: Time-Lapse Confocal Imaging of Living <i>Drosophila</i> Embryos	531
Basic Protocol 4: Time-Lapse Imaging of Living <i>Drosophila</i> Embryos with Two-Photon Laser Scanning Microscopy	537
Basic Protocol 5: Fluorescence Recovery After Photobleaching in Living <i>Drosophila</i> Embryos Using a Laser Scanning Confocal Microscope Capable of Selective Photobleaching	540
Basic Protocol 6: Fluorescence Loss in Photobleaching in Living <i>Drosophila</i> Embryos Using a Laser Scanning Confocal Microscope Capable of Selective Photobleaching	546
Basic Protocol 7: Photoactivation in Living <i>Drosophila</i> Embryos Using a Laser Scanning Confocal Microscope Capable of Selective Photobleaching	548
Reagents and Solutions	553
Commentary	553
Literature Cited	557
<b>Time-Lapse Imaging of Embryonic Neural Stem Cell Division in <i>Drosophila</i> by Two-Photon Microscopy</b>	<b>561</b>
Introduction	561
Basic Protocol: Time-Lapse Imaging by Two-Photon Microscopy	561
Support Protocol: Embryo Preparation	564
Commentary	565
Acknowledgements	569
Literature Cited	569
<b>Imaging Tumor Cell Movement In Vivo</b>	<b>571</b>
Introduction	571
Basic Protocol 1: Generation and In Vivo Imaging of Mammary Tumors	571
Support Protocol 1: In Vivo Imaging Microscope Setup	579
Support Protocol 2: Labeling Vasculature and Macrophages	580
Support Protocol 3: Blood Vessel Imaging Using an Indwelling Catheter	581
Support Protocol 4: Second Harmonic Fiber Imaging	583
Basic Protocol 2: Multiphoton Time-Lapse Image Analysis Using ImageJ and Custom Plugins	583
Support Protocol 5: Separation of Spectral Overlap	586
Reagents and Solutions	587
Commentary	587
Literature Cited	589
<b>Live-Animal Imaging of Renal Function by Multiphoton Microscopy</b>	<b>591</b>
Introduction	591
Basic Protocol 1: Glomerular Permeability	592
Basic Protocol 2: Proximal Tubule Endocytosis	593
Basic Protocol 3: Vascular Flow	594
Basic Protocol 4: Vascular Permeability	596
Basic Protocol 5: Mitochondrial Function	597
Basic Protocol 6: Apoptosis	598
Support Protocol: Anesthesia and Surgical Creation of a Retroperitoneal Surgical Window for Intravital Imaging	599
Reagents and Solutions	602
Commentary	602
Literature Cited	608

<b>Biological Second and Third Harmonic Generation Microscopy</b>	<b>611</b>
Strategic Planning	612
Basic Protocol 1: Designing a Microscope System for HHGM	612
Basic Protocol 2: Detection of Fibrillar Collagen in Connective Tissue Ex Vivo	619
Basic Protocol 3: Detection of SHG in Mouse Tissues by Intravital Microscopy	621
Basic Protocol 4: Simultaneous Detection of Cells and Collagen Fibers In Vitro and In Vivo	622
Support Protocol 1: Cytoplasmic Staining of Live Cells	625
Support Protocol 2: Establishment of 3-D Collagen Cultures	625
Reagents and Solutions	626
Commentary	626
Acknowledgements	632
Literature Cited	632
<b>Two-Photon Imaging of the Immune System</b>	<b>635</b>
Introduction	635
Basic Protocol 1: Preparing the Thymus of a Mouse for Two-Photon Imaging	636
Basic Protocol 2: Preparing the Mesenteric Lymph Nodes (MLNs) of a Mouse for Two-Photon Imaging	637
Basic Protocol 3: Preparing Segments from the Intestine of a Mouse for Two-Photon Imaging	639
Alternate Protocol 1: Agarose Embedding of a Small Tissue Sample or Organotypic Cultures	640
Alternate Protocol 2: Preparing Thymic Slices for Two-Photon Imaging	642
Alternate Protocol 3: Overlaying Thymic Slices with Fluorescently Labeled Cells	645
Support Protocol: Setting Up Two-Photon Imaging Conditions	646
Reagents and Solutions	647
Commentary	647
Literature Cited	654
<b>Section IV Super-Resolution Methods</b>	
<b>Super-Resolution Microscopy: A Comparative Treatment</b>	<b>657</b>
Introduction	657
Super-Resolution Imaging Methodologies	657
Point-Spread Function Engineering	668
Concluding Remarks	677
Acknowledgements	677
Literature Cited	677
<b>Photoactivated Localization Microscopy (PALM) of Adhesion Complexes</b>	<b>683</b>
Introduction	683
Strategic Planning	683
Basic Protocol 1: Preparing PALM Instrumentation	687
Basic Protocol 2: PALM Imaging tdEos/Paxillin Distributions in Fixed Cells	697
Basic Protocol 3: Dual-Color PALM Imaging of tdEos/Vinculin and Dronpa $\alpha$ -Actinin in Fixed Cells	701
Support Protocol 1: Preparing Clean Coverslips	704
Support Protocol 2: Transfection of tdEos/Paxillin into HFF-1 Cells	705
Reagents and Solutions	707
Commentary	708
Literature Cited	710

<b>Comparative and Practical Aspects of Localization-Based Super-Resolution Imaging</b>	<b>713</b>
Introduction	713
Basic Protocol 1: Multi-Channel Labeling of Microtubules and Mitochondria with STORM Tandem Dye Pairs	713
Support Protocol 1: Dye Preparation and Secondary Antibody Labeling	715
Basic Protocol 2: Buffer and Imaging Conditions for Synthetic Photoswitchable Dyes	716
Basic Protocol 3: Labeling Proteins via SNAP Tags for Live-Cell Localization Super Resolution	717
Support Protocol 2: Buffer and Imaging Conditions for Live-Cell Localization Super Resolution	719
Commentary	719
Acknowledgements	723
Literature Cited	723

## **Chapter 4 Image Processing**

<b>Introduction</b>	<b>727</b>
<b>Ethical Considerations When Altering Digital Images</b>	<b>729</b>
Introduction	729
Golden Rules	729
Guidelines from Specific Journals	731
Literature Cited	733
<b>From Image to Data Using Common Image-Processing Techniques</b>	<b>735</b>
Introduction	735
Image Anatomy	735
Image Processing	736
Concluding Remarks	751
Literature Cited	751
<b>Practical Considerations When Altering Digital Images</b>	<b>753</b>
Introduction	753
Sampling Resolution	753
Resampling	755
Acquiring Images	758
Photoshop and Scientific Image–Analysis Programs	762
Optimizing the Display	764
Using Images from Vector Programs and PowerPoint	765
Altering Images Using Photoshop	766
Inserting Files into PowerPoint	784
Literature Cited	785
 Appendix 1: Common Stock Solutions, Buffers, and Media	 787
 Index	 791
