1	and P	rated Biorefinery for Sustainable Production of Fuels, Chemicals, Polymers 2-Tian Yang and Mingrui Yu	1
	1.1 1.2	Introduction, 1 Biorefineries Using Corn, Soybeans, and Sugarcane, 2 1.2.1 Corn Refinery, 2 1.2.2 Soybean Biorefinery, 4 1.2.3 Sugarcane Biorefinery, 7	
	1.3	Lignocellulosic Biorefinery, 7 1.3.1 Pretreatment, 8 1.3.2 Cellulose Hydrolysis and Saccharification, 10 1.3.3 Fermentation, 10 1.3.4 Plant Genetic Engineering to Improve Biomass Feedstock, 11 1.3.5 Thermochemical Platform for Lignocellulosic Biorefinery, 12	
	1.4 1.5	Aquacultures and Algae Biorefinery, 12 Chemical and Biological Conversions for Fuel and Chemical Production, 13 1.5.1 Biofuels, 13 1.5.2 Bio-Based Chemicals, 14 1.5.3 Hybrid Chemical and Biological Conversion Processes, 17 1.5.4 Biorefinery Feedstock Economics, 17 Conclusions and Future Prospects, 18	
2		Putlock of Sugar and Starch Grons in PioneGroup	7
<u> </u>		Outlook of Sugar and Starch Crops in Biorefinery arong Sriroth and Kuakoon Piyachomkwan	/
	2.1 2.2	Introduction, 27 Sugar Crops, 27 2.2.1 Sugarcane, 28 2.2.2 Sugar Beet, 31 2.2.3 Sweet Sorghum, 31	

vi	CO	NTENTS	
	2.3	Starch Crops, 32 2.3.1 Corn, 33 2.3.2 Potato, 34 2.3.3 Wheat, 34 2.3.4 Cassava, 35 2.3.5 Rice, 36 Uses of Sugar and Starch Crops in Biorefinery, 37	
	2.5	2.4.1 Use of Sugar Crops in Biorefinery, 40 2.4.2 Use of Starch Crops in Biorefinery, 41 Conclusion, 43	
	Refe	erences, 43	
3	Pote		47
	Joha	nn Vollmann and Margit Laimer	
	3.1 3.2 3.3	Introduction, 47 Oil Crop Breeding and Its Bioprocessing Potential, 49 Novel Oil Crops, 50	
		 3.3.1 Jatropha, 50 3.3.2 Pongamia, 51 3.3.3 Lesquerella and Cuphea, 52 3.3.4 Camelina and Crambe, 52 3.3.5 Other New Oil Crops, 53 	
	3.4	Traditional Oil Crops, 53 3.4.1 Soybean, 53 3.4.2 Oilseed Rape, 54 3.4.3 Sunflower, 55 3.4.4 Linseed (Flax), 55 3.4.5 Cottonseed, 55 3.4.6 Castor Bean, 55 3.4.7 Oil Palm, 56	
	3.5 Refe	Perspectives for Nonfood Oil Crop Production, 56 erences, 56	
4		rgy Crops er Zegada-Lizarazu and Andrea Monti	61
	4.1	What Are Dedicated Energy Crops?, 61 4.1.1 Toward Second-Generation Biofuels, 63	
	4.2	Annual Crops, 63 4.2.1 Maize (Zea mays), 63 4.2.2 Sorghum (Sorghum bicolor), 66 4.2.3 Sugar Beet (Beta vulgaris), 67 4.2.4 Hemp (Cannabis sativa), 68	
	4.3	Perennial Herbaceous Crops, 68 4.3.1 Sugarcane (Saccharum spp.), 68 4.3.2 Switchgrass (Panicum virgatum), 69 4.3.3 Miscanthus (Miscanthus spp.), 70	
	4.4	Short Rotation Woody Crops, 71 4.4.1 Poplar (<i>Populus</i> spp.) and Willow (<i>Salix</i> spp.), 71	
	4.5	Why Grow Energy Crops?, 72	
	4.6	Barriers to Energy Crops, 72	
	4.7 Refe	Conclusions, 73 erences, 74	

5	Micro Dong	palgae as Feedstock for Biofuels and Biochemicals Wei	•
	_		
	5.1 5.2	Introduction, 79 The Importance of Microalgae as Feedstock for Biofuels and Biochemicals, 79	
	5.3	5.2.1 Biochemical Components and Nutrients in Microalgae, 79 5.2.2 Advantages of Microalgae for Industrial Purpose, 80 New Techniques for Screening and Selecting Microalgae, 81 5.3.1 High-Throughput Screening (HTS) by Fluorescent	
		Techniques, 81 5.3.2 High-Throughput Sorting (HTS) by Flow Cytometry, 81 5.3.3 Rapid Evaluation Techniques for Lipid, 82	
	5.4	Production of Microalgal Biomass in Industry, 82 5.4.1 Mass Cultivation Outdoors and the Challenge, 82 5.4.2 Heterotrophic and Mixotrophic Cultures, 84	
	5.5	Bioprocessing of Microalgae as Feedstock for Biofuel Production, 85 5.5.1 Biodiesel Production by Immobilized Lipase, 85 5.5.2 Bioethanol Production by Anaerobic Fermentation, 85 5.5.3 Biomethane and Biohydrogen Production by Anaerobic Fermentation, 86	
	5.6 Refer	Conclusion and Future Prospects, 87	
6	Pretr	eatment of Lignocellulosic Biomass 91	ı
Ü		Iyun Kim	_
	6.1 6.2	Introduction, 91 Structure and Composition of Lignocellulosic Biomass, 92 6.2.1 Cellulose, 92 6.2.2 Hemicellulose, 93 6.2.3 Lignin, 94	
		6.2.4 Extractives, 95	
	6.3	Challenges in Bioconversion of Lignocellulosic Biomass, 96 6.3.1 Chemical Barriers, 96 6.3.2 Physical Barriers, 97	
	6.4	Pretreatment Technologies, 98	
		6.4.1 Alkali (Sodium Hydroxide, Ammonia, and Lime), 99	
		6.4.2 Autohydrolysis (Hot-Water and Steam Explosion), 101	
		6.4.3 Acid, 102 6.4.4 Other Pretreatments, 102	
	6.5	6.4.5 Severity Factor, 103 Pretreatment Strategies in Bioconversion of Lignocellulosic Biomass into Fuels and Chemicals, 103	
	6.6	Pretreatment or Fractionation: A Role of Pretreatment in the Biorefinery Concept, 104	
		Integration of Pretreatment into the Biomass Conversion Process, 104 nowledgments, 105 rences, 105	
7	Amy	lases: Characteristics, Sources, Production, and Applications 11	1
	J	am A. El-Enshasy, Yasser R. Abdel Fattah, and Nor Zalina Othman	
	7.1 7.2	Introduction, 111 Starch (The Amylases Substrate), 112	

 7.4.1 α-Amylase (EC 3.2.1.1; CAS# 9000-90-2), 113 7.4.2 β-Amylase (EC 3.2.1.2; CAS# 9000-91-3), 114 7.4.3 Glucoamylase or γ-Amylase (EC 3.2.1.3; CAS# 9032-08-0), 114 7.4.4 Pullulanase (EC 3.2.1.41; CAS# 9075-68-7), 114 7.5 Amylase Mode of Action, 114 7.6 Amylase Family Classification, 115 7.7 Amylase Structure, 117 7.7.1 Starch-Binding Domains (SBDs), 117 7.8.1 α-Amylase, 120 7.8.2 β-Amylase, 121 7.8.3 Glucoamylase, 121 7.8.4 Amylases Production from Starchy and Nonstarch Feedstocks, 121 7.9 Amylase Stability, 122 7.9.1 Production by Extremophilic Microorganisms, 122 7.9.2 Production by Recombinant Microorganisms, 122 7.9.3 Protein Engineering and Amino Acids Mutagenesis, 123 7.9.4 Chemical Stabilization Method, 123 7.9.5 Metal Ions Stabilization Method, 123 7.9.6 Immobilization Method, 124 7.10 Industrial Applications, 124 7.11 Future Trends, 125 References, 125 		7.3	Amylases in Nature, 113	
 7.4.2 β-Amylase (EC 3.2.1.2; CAS# 9000-91-3), 114 7.4.3 Glucoamylase or γ-Amylase (EC 3.2.1.3; CAS# 9032-08-0), 114 7.4.4 Pullulanase (EC 3.2.1.41; CAS# 9075-68-7), 114 7.5 Amylase Mode of Action, 114 7.6 Amylase Structure, 117 7.7.1 Starch-Binding Domains (SBDs), 117 7.8 Industrial Production, 118 7.8.1 α-Amylase, 120 7.8.2 β-Amylase, 121 7.8.3 Glucoamylase, 121 7.8.4 Amylases Production from Starchy and Nonstarch Feedstocks, 121 7.9 Amylase Stability, 122 7.9.1 Production by Extremophilic Microorganisms, 122 7.9.2 Production by Recombinant Microorganisms, 122 7.9.3 Protein Engineering and Amino Acids Mutagenesis, 123 7.9.4 Chemical Stabilization Method, 123 7.9.5 Metal Ions Stabilization Method, 123 7.9.6 Immobilization Method, 124 7.10 Industrial Applications, 124 7.11 Future Trends, 125 References, 125 8 Cellulases: Characteristics, Sources, Production, and Applications Xiao-Zhou Zhang and Yi-Heng Percival Zhang 8.1 Introduction, 131 8.2 Cellulase and Their Roles in Cellulose Hydrolysis, 132 8.2.1 Cellulase Enzyme Systems for Cellulose Hydrolysis, 132 8.2.2 Sequence Families of Cellulases and Their Three-Dimensional Structures, 133 8.2.3 Catalytic Mechanisms of Cellulases, 133 8.2.4 Endoglucanase, 133 8.2.5 Exoglucanase; 133 8.2.6 β-Glucosidase, 134 8.2.7 Substrate, Synergy, and Model, 134 8.2.8 Cellulase Improvement Efforts, 136 8.3.1 Directed Evolution, 136 8.3.2 Rational Design, 139 8.3 Designer Cellulosome, 139 8.4 The Applications and Productions of Cellulases, 140 8.4.1 Industrial Applications of Cellulases, 140 8.6		7.4	Types of Amylases, 113	
7.4.3 Glucoamylase or γ-Amylase (EC 3.2.1.3; CAS# 9032-08-0). 114 7.4.4 Pullulanase (EC 3.2.1.41; CAS# 9075-68-7), 114 7.5 Amylase Mode of Action, 114 7.6 Amylase Structure, 117 7.7.1 Starch-Binding Domains (SBDs), 117 7.8 Industrial Production, 118 7.8.1 α-Amylase, 120 7.8.2 β-Amylase, 121 7.8.3 Glucoamylase, 121 7.8.4 Amylase Production from Starchy and Nonstarch Feedstocks, 121 7.9 Amylase Stability, 122 7.9.1 Production by Extremophilic Microorganisms, 122 7.9.2 Production by Extremophilic Microorganisms, 122 7.9.3 Protein Engineering and Amino Acids Mutagenesis, 123 7.9.4 Chemical Stabilization Method, 123 7.9.5 Metal Ions Stabilization Method, 123 7.9.6 Immobilization Method, 124 7.10 Industrial Applications, 124 7.11 Future Trends, 125 References, 125 8 Cellulases: Characteristics, Sources, Production, and Applications Xiao-Zhou Zhang and Yi-Heng Percival Zhang 8.1 Introduction, 131 8.2 Cellulase Enzyme Systems for Cellulose Hydrolysis, 132 8.2.1 Cellulase Enzyme Systems for Cellulose Hydrolysis, 132 8.2.2 Sequence Families of Cellulases and Their Three-Dimensional Structures, 133 8.2.3 Catalytic Mechanisms of Cellulases, 133 8.2.4 Endoglucanase, 133 8.2.5 Exoglucanase, 133 8.2.6 β-Glucosidase, 134 8.2.7 Substrate, Synergy, and Model, 134 8.2.8 Cellulase Improvement Efforts, 136 8.3.1 Directed Evolution, 136 8.3.2 Rational Design, 139 8.3.3 Designer Cellulosome, 139 8.4 The Applications and Productions of Cellulase, 140 8.4.1 Industrial Applications of Cellulases, 140 8.4.2 Cellulase Production, 140 8.5 Consolidated Bioprocessing, 140 8.6 Perspectives, 142			•	
9032-08-0), 114 7.4.4 Pullulanase (EC 3.2.1.41; CAS# 9075-68-7), 114 7.5.4 Amylase Mode of Action, 114 7.6 Amylase Family Classification, 115 7.7 Amylase Structure, 117 7.7.1 Starch-Binding Domains (SBDs), 117 7.8.1 α-Amylase, 120 7.8.2 β-Amylase, 120 7.8.3 Glucoamylase, 121 7.8.4 Amylase Production from Starchy and Nonstarch Feedstocks, 121 7.9 Amylase Stability, 122 7.9.1 Production by Extremophilic Microorganisms, 122 7.9.2 Production by Extremophilic Microorganisms, 122 7.9.3 Protein Engineering and Amino Acids Mutagenesis, 123 7.9.4 Chemical Stabilization Method, 123 7.9.5 Metal Ions Stabilization Method, 123 7.9.6 Immobilization Method, 124 7.10 Industrial Applications, 124 7.11 Future Trends, 125 References, 125 8 Cellulases: Characteristics, Sources, Production, and Applications Xiao-Zhou Zhang and Yi-Heng Percival Zhang 8.1 Introduction, 131 8.2 Cellulase Enzyme Systems for Cellulose Hydrolysis, 132 8.2.1 Cellulase Enzyme Systems for Cellulose Hydrolysis, 132 8.2.2 Sequence Families of Cellulases and Their Three-Dimensional Structures, 133 8.2.3 Catalytic Mechanisms of Cellulases, 133 8.2.4 Endoglucanase, 133 8.2.5 Exoglucanase; 133 8.2.6 β-Glucosidase, 134 8.2.7 Substrate, Synergy, and Model, 134 8.2.8 Cellulase Improvement Efforts, 136 8.3.1 Directed Evolution, 136 8.3.2 Rational Design, 139 8.3.3 Designer Cellulosome, 139 8.4 The Applications and Productions of Cellulase, 140 8.4.1 Industrial Applications of Cellulases, 140 8.4.2 Cellulase Production, 140 8.5 Consolidated Bioprocessing, 140 8.6 Perspectives, 142
