Introduction	1
Philip W. Becraft	
Chapter 1 Large-Scale Mutant Analysis of Seed Development in <i>Arabidopsis</i>	5
David W. Meinke	
Introduction	5
Historical Perspective	5
<i>Arabidopsis</i> Embryo Mutant System	7
Large-Scale Forward Genetic Screens for Seed Mutants	7
Approaches to Mutant Analysis	8
Strategies for Approaching Saturation	10
SeedGenes Database of Essential Genes in <i>Arabidopsis</i>	11
Embryo Mutants with Gametophyte Defects	13
General Features of <i>EMB</i> Genes in <i>Arabidopsis</i>	14
Value of Large Datasets of Essential Genes	15
Directions for Future Research	16
Acknowledgments	17
References	17
Chapter 2 Embryogenesis in <i>Arabidopsis</i>: Signaling, Genes, and the Control of Identity	21
D. L. C. Kumari Fonseka, Xiyang Yang, Anna Mudge, Jennifer F. Topping, and Keith Lindsey	
Introduction	21
Cellular Events	21
Genes and Signaling – the Global Picture	23
Coordination of Genes and Cellular Processes: a Role for Hormones	25
Genes and Pattern	30
Conclusion and Future Directions	36
References	36

Chapter 3	Endosperm Development	43
	Odd-Arne Olsen and Philip W. Becraft	
	Introduction	43
	Overview of Endosperm Structure and Development	43
	Endosperm Cell Fate Specification and Differentiation	48
	Genomic Resources	53
	Transcriptional Profiling of Endosperm Development	54
	Gene Imprinting in Cereal Endosperm	56
	Conclusion	57
	Acknowledgments	58
	References	58
Chapter 4	Epigenetic Control of Seed Gene Imprinting	63
	Christian A. Ibarra, Jennifer M. Frost, Juhyun Shin, Tzung-Fu Hsieh, and Robert L. Fischer	
	Introduction	63
	Genomic Imprinting and Parental Conflict Theory	63
	Epigenetic Regulators of <i>Arabidopsis</i> Imprinting	65
	Mechanisms Establishing <i>Arabidopsis</i> Gene Imprinting	69
	Imprinting in the Embryo	74
	Imprinting in Monocots	75
	Evolution of Plant Imprinting	77
	Conclusion	78
	Acknowledgments	78
	References	78
Chapter 5	Apomixis	83
	Anna M. G. Koltunow, Peggy Ozias-Akins, and Imran Siddiqi	
	Introduction	83
	Biology of Apomixis in Natural Systems	84
	Phylogenetic and Geographical Distribution of Apomixis	89
	Inheritance of Apomixis	90
	Genetic Diversity in Natural Apomictic Populations	93
	Molecular Relationships between Sexual and Apomictic Pathways	94
	Features of Chromosomes Carrying Apomixis Loci and Implications for Regulation of Apomixis	95
	Genes Associated with Apomixis	96
	Transferring Apomixis to Sexual Plants: Clues from Apomicts	97
	Synthetic Approach to Building Apomixis	98
	Synthetic Clonal Seed Formation	102
	Conclusion and Future Prospects	103
	References	103

Chapter 6	High-Throughput Genetic Dissection of Seed Dormancy	111
	Jose M. Barrero, Colin Cavanagh, and Frank Gubler	
	Introduction	111
	Profiling of Transcriptomic Changes	113
	Use of New Sequencing Platforms and Associated Techniques to Study Seed Dormancy	114
	Visualization Tools	116
	Coexpression Studies and Systems Biology Approaches	116
	Mapping Populations for Gene Discovery	117
	Perspective	118
	Acknowledgments	119
	References	119
Chapter 7	Genomic Specification of Starch Biosynthesis in Maize Endosperm	123
	Tracie A. Hennen-Bierwagen and Alan M. Myers	
	Introduction	123
	Overview of Starch Biosynthetic Pathway	124
	Genomic Specification of Endosperm Starch Biosynthesis in Maize	126
	Conclusion	134
	References	134
Chapter 8	Evolution, Structure, and Function of Prolamin Storage Proteins	139
	David Holding and Joachim Messing	
	Introduction	139
	Prolamin Multigene Families	139
	Endosperm Texture and Storage of Prolamins	143
	Conclusion	154
	References	154
Chapter 9	Improving Grain Quality: Wheat	159
	Peter R. Shewry	
	Introduction	159
	Grain Structure and Composition	159
	End Use Quality	161
	Redesigning the Grain	163
	Manipulation of Grain Protein Content and Quality	163
	Manipulation of Grain Texture	167
	Development of Wheat with Resistant Starch	168
	Improving Content and Composition of Dietary Fiber	169
	Wheat Grain Cell Walls	169
	Conclusion	173
	Acknowledgments	173
	References	173

Chapter 10	Legume Seed Genomics: How to Respond to the Challenges and Potential of a Key Plant Family?	179
	Mélanie Noguero, Karine Gallardo, Jérôme Verdier, Christine Le Signor, Judith Burstin, and Richard Thompson	
	Introduction	179
	Development of Genomics Tools	180
	Applications of Genomics Tools to Legume Seed Biology	185
	Future Challenges	192
	References	193
Chapter 11	Cotton Fiber Genomics	203
	Xueying Guan and Z. Jeffrey Chen	
	Introduction	203
	Cotton Fiber Development	204
	Roles for Transcription Factors in Development of <i>Arabidopsis</i> Leaf Trichomes, Seed Hairs, and Cotton Fibers	204
	Fiber Cell Expansion through Cell Wall Biosynthesis	208
	Regulation of Phytohormones during Cotton Fiber Development	209
	Cotton Fiber Genes in Diploid and Tetraploid Cotton	210
	Roles for Small RNAs in Cotton Fiber Development	211
	Conclusion	212
	References	213
Chapter 12	Genomic Changes in Response to 110 Cycles of Selection for Seed Protein and Oil Concentration in Maize	217
	Christine J. Lucas, Han Zhao, Martha Schneerman, and Stephen P. Moose	
	Introduction	217
	Background on the Illinois Long-Term Selection Experiment	217
	Phenotypic Responses to Selection	219
	Additional Traits Affected by Selection	220
	Unlimited Genetic Variation?	221
	Genetic Response to Selection: QTL Mapping in the Crosses of IHP x ILP and IHO x ILO	222
	New Mapping Population: Illinois Protein Strain Recombinant Inbreds	223
	Characterization of Zein Genes and Their Expression in Illinois Protein Strains	225
	Contribution of Zein Regulatory Factor <i>Opaque2</i> to Observed Responses to Selection in Illinois Protein Strains	227
	Major Effect QTL May Explain IRHP Phenotype	228
	Zein Promoter-Reporter Lines to Investigate Regulation of 22-kDa α -Zein Gene Expression in Illinois Protein Strains	229
	Regulatory Changes in <i>FL2-mRFP</i> Expression When Crossed to Illinois Protein Strains	230
	Regulation of <i>FL2-mRFP</i>	232
	Acknowledgments	233
	References	234

Chapter 13	Machine Vision for Seed Phenomics	237
	Jeffery L. Gustin and A. Mark Settles	
	Introduction	237
	High-Energy Imaging: X-ray Tomography and Fluorescence	238
	Optical Imaging: Visible Spectrum	240
	Resonance Absorption: Infrared Spectrum	242
	Resonance Emission: Nuclear Magnetic Resonance	245
	Conclusion	246
	Acknowledgments	246
	References	246
