

Contents

Preface xiii

Acknowledgments xv

Important Information xvii

1. Introduction to Bioconjugation 1

1. What is Bioconjugation? 1
2. Bioconjugation Strategy and Design 6
 - 2.1. Start with the Application in Mind 6
 - 2.2. Designing the Optimal Bioconjugate 10
3. The Applications of Bioconjugates 15
 - 3.1. Assay and Quantification 15
 - 3.2. Detection, Tracking, and Imaging 35
 - 3.3. Purification, Capture, and Scavenging 49
 - 3.4. Catalysis and Chemical Modification 78
 - 3.5. Therapeutics and *in vivo* Diagnostics 87
 - 3.6. Vaccines and Immune Modulation 119
4. Summary 125

2. Functional Targets for Bioconjugation 127

1. Modification of Amino Acids, Peptides, and Proteins 127
 - 1.1. Protein Structure and Reactivity 128
 - 1.2. Protein Crosslinking Methods 144
2. Modification of Sugars, Polysaccharides, and Glycoconjugates 148
 - 2.1. Carbohydrate Structure and Functionality 148
 - 2.2. Carbohydrate and Glycan Conjugation Methods 155
3. Modification of Nucleic Acids and Oligonucleotides 157
 - 3.1. Polynucleotide Structure and Functionality 157
 - 3.2. Polynucleotide Crosslinking Methods 164
4. Creating Specific Functionalities 165
 - 4.1. Introduction of Sulfhydryl Residues (Thiolation) 165
 - 4.2. Introduction of Carboxylate Groups 187
 - 4.3. Introduction of Primary Amine Groups 194
 - 4.4. Introduction of Aldehyde Residues 203
 - 4.5. Introduction of Hydrazine or Hydrazide Functionalities 209
 - 4.6. Introduction of Saccharide or Glycan Groups 215
5. Blocking or Protecting Groups 221
 - 5.1. Blocking or Protecting Amine Groups 221
 - 5.2. Blocking or Protecting Sulfhydryl Groups 223
 - 5.3. Blocking or Protecting Aldehyde or Ketone Groups 227
 - 5.4. Blocking or Protecting Carboxylate Groups 228

The Reactions of Bioconjugation 229

1. Amine Reactions 229
 - 1.1. Isothiocyanates 229
 - 1.2. Isocyanates 233
 - 1.3. Acyl Azides 233
 - 1.4. NHS Esters 233
 - 1.5. Sulfonyl Chlorides 234
 - 1.6. Tosylate Esters 235
 - 1.7. Aldehydes and Glyoxals 235
 - 1.8. Epoxides and Oxiranes 236
 - 1.9. Carbonates 236
 - 1.10. Arylating Agents 236
 - 1.11. Imidoesters 237
 - 1.12. Carbodiimides 237
 - 1.13. Anhydrides 238
 - 1.14. Fluorophenyl Esters 238
 - 1.15. Hydroxymethyl Phosphine Derivatives 239
 - 1.16. Guanidination of Amines 240
 2. Thiol Reactions 240
 - 2.1. Haloacetyl and Alkyl Halide Derivatives 240
 - 2.2. Maleimides 241
 - 2.3. Aziridines 241
 - 2.4. Acryloyl Derivatives 242
 - 2.5. Arylating Agents 242
 - 2.6. Thiol-Disulfide Exchange Reagents 242
 - 2.7. Vinyl Sulfone Derivatives 244
 - 2.8. Metal-Thiol Dative Bonds 244
 - 2.9. Native Chemical Ligation 246
 - 2.10. Cisplatin Modification of Methionine and Cysteine 246
 3. Carboxylate Reactions 246
 - 3.1. Diazoalkanes and Diazoacetyl Compounds 246
 - 3.2. *N,N'*-Carbonyl Diimidazole 248
 - 3.3. Carbodiimides 248
 4. Hydroxyl Reactions 248
 - 4.1. Epoxides and Oxiranes 248
 - 4.2. *N,N'*-Carbonyl Diimidazole 249
 - 4.3. *N,N'*-Disuccinimidyl Carbonate or *N*-Hydroxysuccinimidyl Chloroformate 249
 - 4.4. Oxidation with Periodate 249
 - 4.5. Enzymatic Oxidation 250
 - 4.6. Alkyl Halogens 250
 - 4.7. Isocyanates 250
 5. Aldehyde and Ketone Reactions 251
 - 5.1. Hydrazine and Hydrazide Derivatives 251
 - 5.2. Schiff Base Formation 251
 - 5.3. Reductive Amination 251
 - 5.4. Aminooxy Derivatives 252
 - 5.5. Mannich Condensation 252
 6. Active Hydrogen Reactions 252
 - 6.1. Diazonium Derivatives 253
 - 6.2. Mannich Condensation 253
 - 6.3. Iodination Reactions 253
 7. Photochemical Reactions 253
 - 7.1. Aryl Azides and Halogenated Aryl Azides 254
 - 7.2. Benzophenones 254

- 7.3. Anthraquinones 254
- 7.4. Certain Diazo Compounds 255
- 7.5. Diazirine Derivatives 256
- 7.6. Psoralen Compounds 256
- 8. Cycloaddition Reactions 257
 - 8.1. Diels–Alder Reaction 257
 - 8.2. Complex Formation with Boronic Acid Derivatives 258
 - 8.3. Click Chemistry: Cu^I-Promoted Azide–Alkyne [3 + 2] Cycloaddition 258

‡ Zero-Length Crosslinkers 259

- 1. Carbodiimides 259
 - 1.1. EDC 259
 - 1.2. EDC Plus Sulfo-NHS 263
 - 1.3. CMC 266
 - 1.4. DCC 267
 - 1.5. DIC 268
- 2. Woodward's Reagent K 269
- 3. *N,N'*-Carbonyl Diimidazole 270
- 4. Schiff Base Formation and Reductive Amination 272

• Homobifunctional Crosslinkers 275

- 1. Homobifunctional NHS Esters 277
 - 1.1. DSP and DTSSP 278
 - 1.2. DSS and BS³ 279
 - 1.3. DST and Sulfo-DST 281
 - 1.4. BSOE and Sulfo-BSOE 281
 - 1.5. EGS and Sulfo-EGS 282
 - 1.6. DSG 283
 - 1.7. DSC 283
- 2. Homobifunctional Imidoesters 284
 - 2.1. DMA 285
 - 2.2. DMP 285
 - 2.3. DMS 286
 - 2.4. DTBP 286
- 3. Homobifunctional Sulfhydryl Reactive Crosslinkers 287
 - 3.1. DPDPB 288
 - 3.2. BMH 288
- 4. Difluorobenzene Derivatives 289
 - 4.1. DFDNB 289
 - 4.2. DFDNPS 290
- 5. Homobifunctional Photoreactive Crosslinkers 290
 - 5.1. BASED 290
- 6. Homobifunctional Aldehydes 291
 - 6.1. Formaldehyde 291
 - 6.2. Glutaraldehyde 292
- 7. *BIS*-Epoxides 294
 - 7.1. 1,4-Butanediol Diglycidyl Ether 295
- 8. Homobifunctional Hydrazides 295
 - 8.1. Adipic Acid Dihydrazide 295
 - 8.2. Carbohydrazide 296
- 9. *BIS*-Diazonium Derivatives 296
 - 9.1. *o*-Tolidine, Diazotized 297
 - 9.2. *bis*-Diazotized Benzidine 297
- 10. *BIS*-Alkylhalides 298

6. Heterobifunctional Crosslinkers 299

- 1. Amine-Reactive and Sulfhydryl-Reactive Crosslinkers 300
 - 1.1. SPDP, LC-SPDP, and Sulfo-LC-SPDP 300
 - 1.2. SMPT and Sulfo-LC-SMPT 302
 - 1.3. SMCC and Sulfo-SMCC 303
 - 1.4. MBS and Sulfo-MBS 306
 - 1.5. SIAB and Sulfo-SIAB 307
 - 1.6. SMPB and Sulfo-SMPB 308
 - 1.7. GMBS and Sulfo-GMBS 310
 - 1.8. SBAP 311
 - 1.9. SIA 311
- 2. Carbonyl Reactive and Sulfhydryl Reactive Crosslinkers 312
 - 2.1. MPBH 312
 - 2.2. M₂C₂H 313
 - 2.3. PDPH 313
- 3. Amine-Reactive and Photoreactive Crosslinkers 315
 - 3.1. NHS–ASA, Sulfo-NHS–ASA, and Sulfo-NHS–LC–ASA 317
 - 3.2. SASD 318
 - 3.3. HSAB and Sulfo-HSAB 320
 - 3.4. SANPAH and Sulfo-SANPAH 321
 - 3.5. ANB-NOS 322
 - 3.6. SAND 322
 - 3.7. SADP and Sulfo-SADP 323
 - 3.8. Sulfo-SAPB 325
 - 3.9. SAED 325
 - 3.10. Sulfo-SAMCA 329
 - 3.11. *p*-Nitrophenyl Diazopyruvate 330
 - 3.12. PNP–DTP 331
- 4. Sulfhydryl-Reactive and Photoreactive Crosslinkers 331
 - 4.1. ASIB 331
 - 4.2. APDP 332
 - 4.3. Benzophenone-4-Iodoacetamide 333
 - 4.4. Benzophenone-4-maleimide 335
- 5. Carbonyl-Reactive and Photoreactive Crosslinkers 336
 - 5.1. ABH 336
- 6. Carboxylate-Reactive and Photoreactive Crosslinkers 337
 - 6.1. ASBA 337
- 7. Arginine-Reactive and Photoreactive Crosslinkers 338
 - 7.1. APG 339

⌣ Trifunctional Crosslinkers 341

- 1. 4-Azido-2-Nitrophenylbiocytin-4-Nitrophenyl Ester 341
- 2. Sulfo-SBED 342
- 3. MTS–ATF–Biotin and MTS–ATF–LC–Biotin 345
- 4. Hydroxymethyl Phosphine Derivatives 347
- 5. Tricepts Reagent 348

8. Dendrimers and Dendrons 351

- 1. Dendrimer Construction 351
- 2. Conjugation to Dendrimers 358
 - 2.1. Coupling to Amine-Containing Dendrimers 359
- 3. Dendrimer–Chelate Derivatives for Imaging Applications 380
- 4. Dendrimer Derivatives as Surface Modification Agents 381
- 5. Dendrimer Fluorescent Quantum Dots 384

9. Cross-Bridges and Cleavable Reagent Systems 387

1. Cleavage of Disulfides by Reduction 387
2. Periodate-Cleavable Glycols 388
3. Dithionite-Cleavable Bonds 389
4. Hydroxylamine-Cleavable Esters 389
5. Base Labile Sulfones 391
6. Acyl Hydrazone-Cleavable Linkers 391
7. Photocleavable Linkers 392

10. Fluorescent Probes 395

1. Fluorescein Derivatives 398
 - 1.1. Amine-Reactive Fluorescein Derivatives 398
 - 1.2. Fluorescein Isothiocyanate (FITC) 399
 - 1.3. NHS-Fluorescein and NHS-LC-Fluorescein 400
 - 1.4. Sulfhydryl-Reactive Fluorescein Derivatives 401
 - 1.5. 5-(and 6)-Iodoacetamido-Fluorescein 401
 - 1.6. Fluorescein-5-Maleimide 403
 - 1.7. SAMSA-Fluorescein 404
 - 1.8. Aldehyde-/Ketone- and Cytosine-Reactive Fluorescein Derivatives 405
 - 1.9. Fluorescein-5-thiosemicarbazide 406
 - 1.10. 5-(((2-(Carbohydrazino)methyl)thio)acetyl)-aminofluorescein 407
2. Rhodamine Derivatives 408
 - 2.1. Amine-Reactive Rhodamine Derivatives 409
 - 2.2. Tetramethylrhodamine-5-(and 6)- isothiocyanate (TRITC) 409
 - 2.3. NHS-Rhodamine 410
 - 2.4. Lissamine™ Rhodamine B Sulfonyl Chloride 412
 - 2.5. Texas Red Sulfonyl Chloride 413
 - 2.6. Sulfhydryl-Reactive Rhodamine Derivatives 414
 - 2.7. Tetramethylrhodamine-5-(and 6)- iodoacetamide 414
 - 2.8. Aldehyde-/Ketone- and Cytosine-Reactive Rhodamine Derivatives 416
 - 2.9. Lissamine Rhodamine B Sulfonyl Hydrazine 416
 - 2.10. Texas Red Hydrazide 417
3. Coumarin Derivatives 418
 - 3.1. Amine-Reactive Coumarin Derivatives 418
 - 3.2. AMCA 418
 - 3.3. AMCA-NHS and AMCA-Sulfo-NHS 419
 - 3.4. Sulfhydryl-Reactive Coumarin Derivatives 420
 - 3.5. AMCA-HPDP 420
 - 3.6. DCIA 422
 - 3.7. Aldehyde- and Ketone-Reactive Coumarin Derivatives 422
 - 3.8. AMCA-Hydrazide 423
4. Boron Dipyrrromethene Derivatives 424
 - 4.1. Amine-Reactive Boron Dipyrrromethene Dyes 424
 - 4.2. BODIPY FL C₃-SE 425
 - 4.3. BODIPY 530/550 C₃ 425
 - 4.4. BODIPY 530/550 C₃-SE 426
 - 4.5. Aldehyde-/Ketone-Reactive Boron Dipyrrromethene Dyes 427
 - 4.6. BODIPY 530/550 C₃ Hydrazide 427
 - 4.7. BODIPY 493/503 C₃ Hydrazide 428
 - 4.8. BODIPY FL C₃ Hydrazide 429

- 4.9. Sulfhydryl-Reactive Boron Dipyrrromethene Dyes 430
- 4.10. BODIPY FL IA 430
- 4.11. BODIPY 530/550 IA 431
- 4.12. Br-BODIPY 493/503 431
5. Pyrene Derivatives 432
 - 5.1. Amine-Reactive Cascade Blue Acetyl Azide 432
 - 5.2. Carboxylate-Reactive Cascade Blue Cadaverine and Cascade Blue Ethylenediamine 433
 - 5.3. Aldehyde-/Ketone-Reactive Cascade Blue Hydrazide 434
6. Naphthalimide Derivatives 435
 - 6.1. Sulfhydryl-Reactive Lucifer Yellow Iodoacetamide 436
 - 6.2. Aldehyde-/Ketone-Reactive Lucifer Yellow CH 437
7. Phycobiliprotein Derivatives 438
 - 7.1. Protocol 439
8. Cyanine Dye Derivatives 440
 - 8.1. Amine-Reactive Cyanine Dyes 442
 - 8.2. Thiol-Reactive Cyanine Dyes 444
 - 8.3. Carbonyl-Reactive Cyanine Dyes 446
9. Lanthanide Chelates for Time-Resolved Fluorescence 447
10. Quantum Dot Nanocrystals 455
 - 10.1. Properties of Quantum Dots 455
 - 10.2. Conjugation to Quantum Dots 460
 - 10.3. Conjugation of Proteins to Quantum Dots using EDC 460
 - 10.4. Conjugation to Quantum Dots Using Sulfo-SMCC 462

11. (Strept)avidin-Biotin Systems 465

1. The (Strept)Avidin-Biotin Interaction 465
2. Use of (Strept)Avidin-Biotin Interactions in Assay Systems 467
3. Preparation of (Strept)Avidin Conjugates 469
 - 3.1. NHS Ester-Maleimide-Mediated Conjugation Protocols 469
 - 3.2. Conjugation Using Periodate Oxidation/Reductive Amination 472
 - 3.3. Glutaraldehyde Conjugation Protocol 474
4. Preparation of Fluorescently Labeled (Strept)Avidin 475
 - 4.1. Modification with FITC 476
 - 4.2. Modification with Lissamine Rhodamine B Sulfonyl Chloride 476
 - 4.3. Modification with AMCA-NHS 477
 - 4.4. Conjugation with Phycobiliproteins 478
5. Preparation of Hydrazide Activated (Strept)Avidin 479
6. Biotinylation Techniques 479
 - 6.1. Determination of the Level of Biotinylation 481
 - 6.2. Amine-Reactive Biotinylation Agents 482
 - 6.3. Sulfhydryl-Reactive Biotinylation Agents 490
 - 6.4. Carbonyl- or Carboxyl-Reactive Biotinylation Agents 493
 - 6.5. Photoreactive Biotinylation Agents 496
 - 6.6. Active Hydrogen-Reactive *p*-Aminobenzoyl Biocytin, Diazotized 498
 - 6.7. Glycan Biotinylation Reagents 501

Isotopic Labeling Techniques 507

1. Bifunctional Chelating Agents and Radioimmunoconjugates 507
 - 1.1. DTPA 507
 - 1.2. DOTA, NOTA, and TETA 508
 - 1.3. DTTA 509
 - 1.4. DFA 509
 - 1.5. Use of Thiolation Reagents for Direct Labeling to Sulfhydryl Groups 510
 - 1.6. FeBABE 511
2. Iodination Reagents 512
 - 2.1. Chloramine-T 514
 - 2.2. IODO-BEADS 515
 - 2.3. Iodogen 517
 - 2.4. Lactoperoxidase-Catalyzed Iodination 519
 - 2.5. Iodinatable Modification and Crosslinking Agents 519
3. Mass Tags and Isotope Tags 523
 - 3.1. ICAT Reagents 524
 - 3.2. ECAT Reagents 528
 - 3.3. Isobaric Mass Tags 530

13. Silane Coupling Agents 535

1. Silane Reaction Strategies 537
 - 1.1. Aqueous/Organic Solvent Deposition 538
 - 1.2. Aqueous Deposition 538
 - 1.3. Organic Solvent Deposition 538
 - 1.4. Vapor-Phase Deposition 539
2. Functional Silane Compounds 539
 - 2.1. 3-Aminopropyltriethoxysilane (APTS) and 3-Aminopropyltrimethoxysilane 539
 - 2.2. Carboxyethylsilanetriol 542
 - 2.3. N-(Trimethoxysilylpropyl)Ethylenediamine Triacetic Acid (TMS-EDTA) 543
 - 2.4. 3-Glycidoxypropyltrimethoxysilane (GOPTS) and 3-Glycidoxypropyltriethoxysilane 545
 - 2.5. Isocyanatopropyltriethoxysilane (ICPTES) 545

14. Microparticles and Nanoparticles 549

1. Particle Types 549
2. Particle Characteristics and Stability 550
3. Particle Concentration 553
4. Polymeric Microspheres and Nanospheres 553
 - 4.1. Passive Adsorption 555
 - 4.2. Covalent Coupling to Polymeric Particles 557
5. Silica Particles 575
 - 5.1. Fluorescent Silica Particles 576
 - 5.2. Silane Functionalization of Silica Particles 580
6. Gold Particles 580
 - 6.1. Properties and Use of Gold Conjugates 581
 - 6.2. Preparation of Mono-Disperse Gold Suspensions for Protein Labeling 583
 - 6.3. Preparation of Protein A-Gold Complexes 584
 - 6.4. Preparation of Antibody-Gold Complexes 585
 - 6.5. Preparation of Lectin-Gold Complexes 586
 - 6.6. Preparation of (Strept)avidin-Gold Complexes 587

15. Immobilization of Ligands on Chromatography Supports 589

1. Support Materials used for Affinity Chromatography 591
 - 1.1. Natural Product Chromatography Supports 591
 - 1.2. Synthetic Polymeric Chromatography Supports 598
2. Activation and Coupling of Affinity Ligands to Chromatography Supports 620
 - 2.1. Amine-Reactive Immobilization Methods 623
 - 2.2. Thiol-Reactive Immobilization Methods 670
 - 2.3. Hydroxyl-Reactive Immobilization Methods 690
 - 2.4. Carbonyl-Reactive Immobilization Methods 696
 - 2.5. Streptavidin-Mediated Immobilization Methods 712
 - 2.6. Protein A-, Protein G-, or Protein A/G-Mediated Antibody Immobilization Methods 713
 - 2.7. Reactive Hydrogen-Mediated Immobilization Methods 716
 - 2.8. Creating Spacer Arms on Chromatography Supports 722

Buckyballs, Fullerenes, and Carbon Nanotubes 741

1. Buckyballs and Fullerenes 741
 - 1.1. Properties of Fullerenes 741
 - 1.2. Modification of Fullerenes 741
2. Carbon Nanotubes 747
 - 2.1. Nanotube Properties 747
 - 2.2. Nanotube Functionalization 749
 - 2.3. Detergent or Lipid Modification of Carbon Nanotubes 750
 - 2.4. Pyrene Modification of Carbon Nanotubes 752
 - 2.5. Modification of Carbon Nanotubes by Cycloaddition 754

Chemoselective Ligation Bioorthogonal Reagents 757

1. Diels-Alder Reagent Pairs 758
2. Hydrazine-Aldehyde Reagent Pairs 760
 - 2.1. Conjugation using the Aldehyde/ Hydrazine Reaction 763
3. Aminoxy-Aldehyde Reagent Pairs 763
4. Boronic Acid-Salicylhydroxamate Reagent Pairs 766
5. Click Chemistry: Cu(I)-Promoted Azide-Alkyne [3 + 2] Cycloaddition 769
6. Staudinger Ligation 776
7. Native Chemical Ligation 781
 - 7.1. Expressed Protein Ligation and Inteins 782

18. PEGylation and Synthetic Polymer Modification 787

1. Discrete PEG Reagents 787
 - 1.1. Homobifunctional PEG Crosslinkers 790
 - 1.2. Heterobifunctional PEG Reagents 794
 - 1.3. Biotinylation Reagents Containing Discrete PEG Linkers 806
 - 1.4. Discrete PEG Modification Reagents 819

2.	Use of Photoreactive Crosslinkers to Study Protein Interactions	999
2.1.	Sulfo-SAND, SANPAH, and Sulfo-SANPAH	1000
2.2.	Sulfo-SFAD	1000
3.	Trifunctional Label Transfer Reagents	1002
3.1.	Sulfo-SBED	1003
3.2.	MTS-ATF-Biotin and MTS-ATF-LC-Biotin	1007
4.	Metal Chelates in the Study of Protein Interactions	1010
4.1.	FeBABE for Protein Mapping Studies	1010

4.2.	Ru(II)bpy ₃ ²⁺ for Light-Triggered, Zero-Length Crosslinking of Protein Interactions	1014
