<b>Preface</b>	vii
<i>Preface to the Second Edition</i>	ix
<b>1 Introduction</b>	1
1.1 Birth of nuclear physics . . . . .	1
1.2 Units . . . . .	2
1.3 Nomenclature . . . . .	4
1.4 Early developments . . . . .	5
1.5 The mass formula and the shell corrections . . . . .	6
1.6 Heavy ion collisions . . . . .	7
1.7 Sub-nuclear physics . . . . .	7
<b>2 Bulk Properties of Nuclei - I</b>	9
2.1 Fermi gas model . . . . .	9
2.1.1 Volume energy and asymmetry energy . . . . .	11
2.2 Liquid drop model . . . . .	13
2.2.1 Bethe-Weizsäcker mass formula . . . . .	14
2.3 Most stable isobar . . . . .	19
2.4 Nuclear Fission . . . . .	21
2.5 The Bohr-Wheeler theory . . . . .	22
2.6 Nuclear size . . . . .	24
2.7 Mirror nuclei . . . . .	25
2.8 Elastic scattering of electrons by nuclei . . . . .	27
2.8.1 Spherical nucleus and the Helm model . . . . .	30
2.9 Muonic x-rays . . . . .	32
2.9.1 Muonic atoms . . . . .	32
<b>3 Bulk Properties of Nuclei - II</b>	43
3.1 Electric multipole moments . . . . .	44
3.1.1 Quantum mechanical description . . . . .	48
3.1.2 Electric quadrupole moment . . . . .	49

3.2	Spheroidal nuclei . . . . .	52
3.3	Nuclear magnetic moment . . . . .	55
3.4	The Schmidt model . . . . .	57
<b>4</b>	<b>The Nuclear Force</b>	<b>68</b>
4.1	Short range force . . . . .	70
4.2	General form of the nucleon-nucleon potential . . . . .	72
4.3	Exchange forces . . . . .	73
4.4	Meson theory of nuclear forces . . . . .	76
4.4.1	Concept of exchange of particles . . . . .	76
4.4.2	The Yukawa potential . . . . .	77
4.4.3	General form of the pion-nucleon interaction . . . . .	78
4.4.4	The nucleon-nucleon potential . . . . .	79
4.5	Experimental evidence . . . . .	82
4.6	Low energy nucleon-nucleon scattering . . . . .	83
4.6.1	The scattering length . . . . .	85
4.6.2	The effective range theory . . . . .	87
4.6.3	Spin dependence of neutron-proton scattering . . . . .	90
4.6.4	Scattering of neutrons by ortho and para hydrogen . . . . .	91
4.6.5	Proton-proton scattering . . . . .	94
4.6.6	Neutron-neutron scattering . . . . .	95
<b>5</b>	<b>The Deuteron</b>	<b>106</b>
5.1	The deuteron wave function . . . . .	107
5.2	Simple considerations using central potential . . . . .	108
5.3	The effect of hard core . . . . .	113
5.4	Deuteron radial wave function . . . . .	114
5.5	The effect of the tensor potential . . . . .	116
5.6	The electric quadrupole moment . . . . .	118
5.7	The magnetic moment . . . . .	121
<b>6</b>	<b>Nuclear Shell Model</b>	<b>129</b>
6.1	The Magic Numbers . . . . .	129
6.2	The Independent Particle Model . . . . .	131
6.3	Nuclear ground state configurations and spins . . . . .	136
6.4	Low-lying energy levels . . . . .	139
6.5	Nuclei with two extra-core nucleons . . . . .	142
6.5.1	The method of Slater integrals . . . . .	142
6.5.2	The method of Talmi integrals . . . . .	146
6.6	The particle-hole model . . . . .	152
6.7	Nilsson Model . . . . .	155
6.7.1	Nilsson states in cylindrical representation . . . . .	161

<b>7 Collective Models of the Nucleus</b>	<b>178</b>
7.1 Vibrational energy spectrum . . . . .	178
7.2 Rotational energy spectrum . . . . .	182
7.3 Vibrational energy spectrum of odd-A nuclei . . . . .	185
7.4 Rotational bands in distorted odd-A nuclei . . . . .	186
<b>8 Alpha Decay</b>	<b>194</b>
8.1 The Q-value for alpha decay . . . . .	195
8.2 Coulomb potential barrier . . . . .	197
8.3 One dimensional potential barrier problem . . . . .	199
8.4 Three dimensional potential barrier . . . . .	201
8.5 Gamow's theory of alpha decay . . . . .	202
8.6 Alpha particle energy spectrum . . . . .	208
<b>9 Beta Decay</b>	<b>215</b>
9.1 Fermi's theory . . . . .	216
9.2 Classification of nuclear transitions . . . . .	221
9.3 Neutrino mass . . . . .	224
9.4 Parity violation in beta decay . . . . .	225
9.5 Relativistic treatment . . . . .	227
9.6 Universal Fermi Interaction (UFI) . . . . .	229
<b>10 Gamma Decay</b>	<b>235</b>
10.1 Electric and magnetic multipole radiation . . . . .	235
10.2 Selection rules for multipole radiation . . . . .	238
10.3 Internal conversion . . . . .	240
10.4 Nuclear isomers . . . . .	241
10.5 Mössbauer effect . . . . .	242
<b>11 Muon Capture</b>	<b>247</b>
11.1 Observables in muon capture . . . . .	248
11.2 The effective muon capture Hamiltonian . . . . .	249
11.3 Partial muon capture rate . . . . .	251
11.4 Capture of polarized muons . . . . .	254
11.5 Asymmetry and polarization of recoil nucleus . . . . .	255
11.6 Asymmetry and the longitudinal polarization of the emitted neutron . . . . .	261
11.7 Cascade process in muon capture and $\gamma$ - $\nu$ angular correlations . . . . .	264
<b>12 Nuclear Reactions</b>	<b>269</b>
12.1 The compound nucleus model . . . . .	271
12.2 The optical model . . . . .	275

12.3 The direct reaction model . . . . .	277
12.3.1 Deuteron pick-up reaction . . . . .	278
12.3.2 Quai-free scattering of electrons . . . . .	279
12.4 Nuclear fission . . . . .	283
<b>13 Heavy Ion Reactions</b>	<b>292</b>
13.1 Stability of heavy nuclei . . . . .	293
13.1.1 The shell effects . . . . .	294
13.2 Recent trends in nuclear structure physics . . . . .	297
13.3 Superheavy elements . . . . .	298
13.4 Relativistic heavy ion collisions . . . . .	302
13.5 Quantum electrodynamics of strong fields . . . . .	306
<b>14 Sub-Nuclear Physics</b>	<b>311</b>
14.1 Proliferation of elementary particles . . . . .	312
14.2 Classification of elementary particles and their interactions . . . . .	313
14.3 Short-lived resonance states . . . . .	315
14.4 Gell-mann–Okuba mass formula . . . . .	321
14.5 Quarks as the building blocks of hadrons . . . . .	322
14.6 Baryon magnetic moments . . . . .	325
14.7 Discovery of heavier quarks . . . . .	326
14.8 Colour degree of freedom . . . . .	327
14.9 Deep inelastic scattering of leptons . . . . .	329
14.9.1 Nucleon structure functions . . . . .	331
14.9.2 The Bjorken scaling . . . . .	334
14.9.3 The quark-parton model . . . . .	335
14.9.4 Quark distribution functions . . . . .	337
14.9.5 Relation between the charged and neutral structure functions . .	340
14.9.6 Quark distributions extracted from structure functions . . . .	341
14.9.7 DIS experiments of polarized leptons on polarized nucleons .	342
14.10 The statistical model of the nucleon . . . . .	346
<b>Appendix A</b>	
Partial Wave Analysis of Scattering . . . . .	357
<b>Appendix B</b>	
Angular Momentum . . . . .	365
<b>Appendix C</b>	
Tables of Clebsch-Gordan Coefficients . . . . .	374

**Appendix D**

Tables of Racah Coefficients . . . . .	375
--	-----

**Appendix E**

Spherical Tensors . . . . .	377
-----------------------------	-----

**Appendix F**

The Spherical Harmonics . . . . .	382
-----------------------------------	-----

**Appendix G**

Evaluation of Matrix Elements . . . . .	384
---	-----

**Appendix H**

Evaluation of Transition Probability . . . . .	393
--	-----

**Subject Index**

402
