Preface	xi
---------------	----

CHAPTER 1 Factors Promoting Renewable Energy Applications... 1

1.1 Introduction.....	1
1.2 US and world energy usage for electricity generation	2
1.3 Factors affecting the application and use of alternative energy sources.....	5
1.3.1 The impact of high oil prices	5
1.3.2 Impact of fossil fuel on renewable energy use	14
1.4 Global warming and renewable energy use.....	22
1.4.1 Global warming in general.....	25
1.4.2 Global warming and sea levels	27
1.4.3 Other global warming concerns and directions	28
1.4.4 What can be done to curb global warming?	29
1.5 Conclusion	30
References	31

CHAPTER 2 Photovoltaic 33

2.1 Introduction.....	33
2.2 Solar radiation characteristics	34
2.2.1 Solar constant	34
2.2.2 Hourly and seasonal variations in solar radiance	34
2.2.3 Direct and diffuse sunlight.....	34
2.2.4 Air mass	35
2.2.5 Peak sun hours.....	36
2.3 Photovoltaic conversion	39
2.3.1 Atomic number	39
2.3.2 Properties and characterization of a photovoltaic: p-n junction.....	43
2.4 Performance evaluation of PV cells, modules, panels, and arrays.....	45
2.4.1 Current–voltage characteristics	45
2.4.2 Power-voltage characteristics	47
2.4.3 Maximum power point of a PV module	48
2.4.4 Effect of resistive load on the operating point	48
2.4.5 Equivalent circuit of a solar cell	51

2.4.6	Open-circuit voltage and short-circuit current.....	54
2.4.7	Jet Propulsion Lab model.....	54
2.5	Connections of photovoltaic devices	56
2.5.1	Series connection of photovoltaic devices.....	56
2.5.2	Parallel connection of photovoltaic devices	59
2.5.3	Blocking diode.....	61
2.5.4	Bypass diode.....	62
2.5.5	Orientation of collector surface.....	62
2.6	Optimization of photovoltaic arrays	64
2.6.1	Introduction.....	64
2.6.2	Good matching method	65
2.6.3	Battery storage method.....	65
2.6.4	Solar concentration method.....	66
2.6.5	Sun-tracking method.....	67
2.6.6	Electrical array reconfiguration method	71
2.6.7	Maximum power-point tracker method	73
2.7	Photovoltaic systems	78
2.7.1	Classification of photovoltaic systems.....	78
2.7.2	Components of a PV system	79
2.7.3	Design of a stand-alone PV system with battery storage	86
2.8	Applications of photovoltaics.....	91
2.8.1	Solar evolution.....	91
2.8.2	Portable panels and generator	96
2.8.3	PV-powered homes and remote villages.....	98
2.8.4	Central power stations.....	102
2.8.5	Future expectations.....	102
2.9	Utility interconnection issues and requirements.....	103
2.9.1	Introduction.....	103
2.9.2	Interaction of the utility companies with RES customers	104
	Problems	109
	References	112

CHAPTER 3 Wind Energy Conversion Systems..... 115

3.1	Introduction.....	115
3.2	The characteristics of wind	120
3.2.1	Average wind speed (mean).....	120
3.2.2	Wind speed–duration curve and height variations.....	120
3.2.3	Wind speed variations with time and direction	122
3.2.4	Wind rose.....	123

3.2.5	Wind shear and gusts.....	124
3.2.6	Wind speed distribution and probability functions.....	125
3.3	The aerodynamic theory of windmills	128
3.4	Wind power profile	131
3.5	Basic elements of the WECS	135
3.5.1	Types of wind turbines.....	139
3.5.2	HAWT versus VAWT	146
3.5.3	Upwind and downwind machines	148
3.5.4	Large turbines versus small turbines.....	148
3.5.5	Wind turbine generators	149
3.6	WECS schemes for generating electricity	160
3.6.1	Constant speed, constant frequency scheme	160
3.6.2	Almost constant speed, constant frequency scheme	160
3.6.3	Variable speed, constant frequency scheme	161
3.6.4	Variable speed, variable frequency scheme.....	162
3.7	Siting and sizing of WECS	162
3.8	Wind turbine site matching	166
3.9	Applications for WECS.....	167
3.9.1	Stand-alone operation.....	167
3.9.2	Small-scale applications	167
3.9.3	Intermediate-scale application.....	171
3.9.4	Utility grid-connected WECS	173
3.9.5	Wind farms	175
3.10	Levels of wind power generation in utility grid systems	178
3.11	Future expectation of wecs.....	183
3.12	A hybrid wind and PV energy conversion system	190
3.12.1	Description.....	190
3.12.2	Advantages of the HWPS.....	191
	Problems	194
	References.....	197

CHAPTER 4 Energy Storage 201

4.1	Battery technology.....	201
4.1.1	Introduction.....	201
4.1.2	Battery construction and principles of operation.....	205
4.1.3	Applications	208
4.1.4	Types of batteries used for energy storage	209
4.2	Fuel cells.....	224
4.2.1	Introduction.....	225
4.2.2	Fuel cell components and operation	226
4.2.3	Types of fuel cells	227

4.2.4	Comparison of the main types of fuel cells	238
4.2.5	Fuel cell efficiency	240
4.2.6	Applications of fuel cells	240
4.2.7	Future outlook for fuel cells.....	247
4.2.8	Reformers.....	247
4.2.9	Hydrogen storage.....	254
4.3	Compressed air energy storage	257
4.3.1	Introduction.....	257
4.3.2	Components of a CAES system	258
4.3.3	Operation	258
4.3.4	Using CAES with a gas plant	259
4.3.5	Advantages and disadvantages of CAES systems	260
4.3.6	Worldwide CAES	260
4.3.7	Energy stored in a CAES	261
4.3.8	Future and planned construction of CAES systems	265
4.4	Flywheel storage.....	265
4.4.1	Principle of operation	265
4.4.2	Basic components of a flywheel	266
4.4.3	Flywheel operation	269
4.4.4	Storing energy.....	269
4.4.5	Installation	271
4.4.6	Advantages and disadvantages of flywheel storage	272
4.4.7	Comparison with other energy-storage systems	273
4.4.8	Applications.....	274
4.5	Hydropower	275
4.5.1	Introduction.....	275
4.5.2	Major components and theory of operation of hydropower.....	277
4.5.3	Types of hydropower turbines.....	278
4.5.4	Hydro-pump storage principles	279
4.6	Supercapacitors (Ultracapacitors)	281
4.6.1	Structure, characteristics, and operation of a supercapacitor	281
4.6.2	Advantages and disadvantages of supercapacitors	285
4.6.3	Differences between supercapacitors and other energy-storage methods.....	286
4.6.4	Applications of supercapacitors	288
4.6.5	Other supercapacitor applications	289
4.7	Superconducting magnetic energy storage	290
4.7.1	Introduction.....	290
4.7.2	History of superconductivity	291

4.7.3 Components and operation of SMES	292
4.7.4 Energy stored in the SMES	292
4.7.5 Applications of superconducting magnetic energy	293
4.7.6 Advantages, disadvantages, and the future of SEMS systems	295
Problems	296
References	297

CHAPTER 5 Emerging Renewable Energy Sources 299

5.1 Ocean thermal energy conversion	299
5.1.1 Introduction	299
5.1.2 OTEC schemes	300
5.1.3 Power and efficiency calculation	301
5.1.4 Land-based and floating OTEC plants	303
5.1.5 Advantages and disadvantages of OTEC	304
5.1.6 The future of OTEC	307
5.2 Tidal energy	307
5.2.1 Background on tides	307
5.2.2 Tidal periodicity, amplitude, and power output calculation	309
5.2.3 Tidal energy conversion systems	310
5.3 Wave power generation systems	316
5.3.1 Wave power principles	317
5.3.2 Types of WPGS	320
5.4 Geothermal energy systems	327
5.4.1 Introduction	327
5.4.2 Geothermal resources	328
5.4.3 Geothermal electricity generation technologies	331
5.5 Biomass energy systems	334
5.5.1 Introduction	335
5.5.2 Biomass energy conversion	336
5.5.3 Bioenergy	338
5.5.4 Types of biofuels	339
5.5.5 Advantages and disadvantages of biomass	349
5.6 Solar thermal energy conversion systems	349
5.6.1 Introduction	349
5.6.2 Large-scale STECS	350
5.6.3 Small-scale STECS	356
5.6.4 Advantages and disadvantages of STECS	359

5.7	Microturbines.....	359
5.7.1	Definition and applications of a microturbine.....	360
5.7.2	Components and operation of microturbines.....	361
5.7.3	Advantages and disadvantages of microturbines	362
5.8	Satellite power systems	362
5.8.1	Introduction.....	363
5.8.2	Types of solar power satellite	364
5.8.3	Advantages and disadvantages of a SPS.....	366
5.8.4	The future of SPS	367
	Problems	368
	References	369
 Index.....		 373
