<b>CHAPTER 1 Genomic Approaches and Abiotic Stress Tolerance in Plants</b>	<b>1</b>
<i>Bushra Rashid, Tayyab Husnain and Sheikh Riazuddin</i>	
1.1 Introduction	1
1.2 Physiological, cellular, and biochemical mechanisms of abiotic stress in plants	2
1.2.1 Organic and inorganic solutes	3
1.2.2 Role of abscisic acid under abiotic stress	4
1.2.3 Reactive oxygen species	5
1.3 Effects of abiotic stresses on physiological, cellular, and biochemical processes in plants	6
1.4 Conventional breeding technology to induce abiotic stress tolerance in plants	7
1.5 Functional genomics approaches to induce abiotic stress tolerance in plants	7
1.5.1 Advances in phenology assist the genomic studies of abiotic stress tolerance	8
1.5.2 Molecular mapping	10
1.5.3 Expression sequence tags	12
1.5.4 Microarray	13
1.5.5 Proteomics and metabolomics	16
1.5.6 Transgenic plants for improved salinity tolerance	18
1.6 Conclusion and future perspectives	25
Acknowledgments	26
References	26

<b>CHAPTER 2 Metabolomics Role in Crop Improvement</b>	<b>39</b>
<i>Saleha Resham, Fizza Akhter, Muhammad Ashraf and Alvina Gul Kazi</i>	
2.1 Introduction	39
2.2 Techniques involved in metabolomics	41
2.2.1 Metabolite target analysis	41
2.2.2 Metabolite profiling	41
2.2.3 Metabolite fingerprinting	41
2.2.4 Bio-resource databases	42
2.3 Metabolomics and nutrigenomics—a link	42

## Contents

2.4	Applications of metabolomics in crop improvement	43
2.4.1	Improvement of tomato quality by metabolomics	45
2.4.2	Improvement of rice quality by metabolomics	48
2.5	Improvement of strawberry quality by metabolomics	49
2.6	Conclusion and future prospects	52
	References	52
<b>CHAPTER 3</b>	<b>Transcription Factors and Environmental Stresses in Plants</b>	<b>57</b>
	<i>Loredana F. Ciarmiello, Pasqualina Woodrow, Pasquale Piccirillo, Antonio De Luca and Petronia Carillo</i>	
3.1	Introduction	57
3.2	Transcription factors activate stress responsive genes	57
3.3	APETALA 2/ethylene-responsive element-binding factor	58
3.3.1	Cis-acting regulatory element	62
3.4	The MYC/MYB transcriptional factors	63
3.5	NAC transcriptional factors	65
3.5.1	NAC TFs' role in abiotic stress response	65
3.5.2	Structural features of NAC TFs	67
3.6	WRKY transcriptional factors	67
3.6.1	The WRKY domain and the W-Box	68
3.6.2	Role of WRKY genes under abiotic stresses	68
3.7	CYS2HIS2 zinc-finger (C2H2 ZF) TFs	69
3.7.1	C2H2 ZF DBD and overall structure of Zat7	70
3.8	Conclusion and future perspectives	71
	References	72
<b>CHAPTER 4</b>	<b>Plant Resistance under Cold Stress: Metabolomics, Proteomics, and Genomic Approaches</b>	<b>79</b>
	<i>Saiema Rasool, Shailza Singh, Mirza Hasanuzzaman, Muneeb U. Rehman, M.M. Azooz, Helal Ahmad Lone and Parvaiz Ahmad</i>	
4.1	Introduction	79
4.2	Causes of freezing injury	80
4.3	Freezing-tolerance mechanisms	82
4.3.1	Metabolomic approaches	83
4.3.2	LEA proteins	85
4.3.3	HSP proteins	86
4.3.4	COR genes	86
4.3.5	Osmoprotectants	87
4.4	Antioxidant defense under cold stress	87
4.5	Cold signal transducers	90

4.5.1	Ca <sup>2+</sup> influx channels	90
4.5.2	ABA and stress signal transduction networks	90
<b>4.6</b>	<b>Conclusion and future prospects</b>	<b>91</b>
	References	91
<b>CHAPTER 5</b>	<b>Genetic Engineering of Crop Plants for Abiotic Stress Tolerance</b>	<b>99</b>
	<i>Surbhi Goel and Bhawna Madan</i>	
<b>5.1</b>	<b>Introduction</b>	<b>99</b>
<b>5.2</b>	<b>Overexpression of genes for transcriptional regulation</b>	<b>100</b>
5.2.1	Zinc-finger domains	100
5.2.2	Dehydration-responsive element	101
5.2.3	NAC transcription factor	102
5.2.4	Basic leucine zipper transcription factors	102
5.2.5	MYB transcription factors	103
<b>5.3</b>	<b>Overexpression of genes for osmoprotectants</b>	<b>104</b>
5.3.1	Glycine betaine	104
5.3.2	Proline	105
5.3.3	Polyamines	105
5.3.4	LEA proteins	106
5.3.5	Polyols	107
5.3.6	Ectoine	108
<b>5.4</b>	<b>Engineering of ion transport</b>	<b>109</b>
<b>5.5</b>	<b>Overexpression of genes for stress signaling</b>	<b>110</b>
<b>5.6</b>	<b>Quenching of reactive oxygen species</b>	<b>111</b>
<b>5.7</b>	<b>Conclusion and future perspectives</b>	<b>112</b>
	References	113
<b>CHAPTER 6</b>	<b>Bt Crops: A Sustainable Approach towards Biotic Stress Tolerance</b>	<b>125</b>
	<i>Mahmood-ur-Rahman, Muhammad Qasim, Shazia Anwar Bukhari and Tayyaba Shaheen</i>	
<b>6.1</b>	<b>Introduction</b>	<b>125</b>
<b>6.2</b>	<b>Bacillus thuringiensis</b>	<b>126</b>
<b>6.3</b>	<b>Transformation of crops with Bt genes</b>	<b>127</b>
6.3.1	Agrobacterium-mediated genetic transformation	127
6.3.2	Transformation of plants by particle bombardment	129
<b>6.4</b>	<b>Molecular analyses of putative transgenic plants</b>	<b>129</b>
6.4.1	Selection marker	129
6.4.2	Molecular analyses based on DNA	131
6.4.3	Molecular analyses based on protein	133
<b>6.5</b>	<b>Greenhouse and field experiments</b>	<b>134</b>

## Contents

6.6 Biosafety and risk assessment studies	135
6.7 Conclusion and future prospects	136
Acknowledgments	136
References	136
<b>CHAPTER 7 Modern Tools for Enhancing Crop Adaptation to Climatic Changes</b>	<b>143</b>
<i>Kinza Waqar, Orooj Surriya, Fakiha Afzal, Ghulam Kubra, Shabina Iram, Muhammad Ashraf and Alvina Gul Kazi</i>	
7.1 Introduction	143
7.2 Stresses caused by climatic changes	143
7.2.1 Drought	144
7.2.2 Temperature	144
7.2.3 Ozone	144
7.2.4 Increased carbon dioxide levels	145
7.2.5 Biotic factors	145
7.3 Modern tools for enhancing crop adaptation	145
7.3.1 Domestication bottlenecks	145
7.3.2 Conventional breeding methods	146
7.3.3 Molecular breeding methods	148
7.3.4 Plant tissue culture	149
7.3.5 Genetic engineering and genetically modified (GM) crops	150
7.3.6 EST sequencing and NGS	152
7.4 Conclusion and future prospects	153
References	154
<b>CHAPTER 8 Interactions of Nanoparticles with Plants: An Emerging Prospective in the Agriculture Industry</b>	<b>159</b>
<i>Vani Mishra, Rohit K. Mishra, Anupam Dikshit and Avinash C. Pandey</i>	
8.1 Introduction	159
8.2 Classification of nanoparticles	159
8.3 Applications of NPs	160
8.4 Plant–nanoparticle interactions: yet to reach “the state of art”	161
8.5 Mode of nanoparticle internalization by plants	162
8.5.1 Carbon-based NPs: uptake, translocation and accumulation in plants	164
8.5.2 Metal oxide-based NPs: uptake, translocation, and accumulation in plants	166
8.5.3 Metal-based nanoparticles: uptake, translocation, and accumulation in plants	167
8.6 Influence of nanoparticles as growth promoters in plants	168

8.7 Influence of NPs as biological control in plants	172
8.8 Conclusion and future perspectives	175
Acknowledgments	175
References	175
<b>CHAPTER 9 Role of miRNAs in Abiotic and Biotic Stresses in Plants</b>	<b>181</b>
<i>Syed Sarfraz Hussain and Bujun Shi</i>	
9.1 Introduction: miRNA as a significant player in gene regulation	181
9.2 Mechanisms of miRNA biogenesis and function	183
9.3 miRNA-mediated functions in plants	184
9.4 Genome-wide miRNA profiling under abiotic stresses	185
9.5 Involvement of miRNAs in plant stresses	186
9.5.1 Abiotic stresses	186
9.5.2 Biotic stresses	188
9.6 Overexpression of miRNAs to resolve their functions in abiotic stresses in plants	189
9.7 Innovative approaches for elucidating gene function	191
9.7.1 Artificial miRNA technology	192
9.7.2 Target mimicry	194
9.8 Conclusion and future prospects	194
References	195
<b>CHAPTER 10 Gene Silencing: A Novel Cellular Defense Mechanism Improving Plant Productivity under Environmental Stresses</b>	<b>209</b>
<i>Renu Bhardwaj, Puja Ohri, Ravinderjit Kaur, Amandeep Rattan, Dhriti Kapoor, Shagun Bali, Parminder Kaur, Anjali Khajuria and Ravinder Singh</i>	
10.1 Introduction	209
10.2 Elements of RNAi	210
10.2.1 Dicer	210
10.2.2 Small interfering RNA	211
10.2.3 Guide RNAs and RNA-induced silencing complex	211
10.2.4 RNA-dependent RNA polymerase	212
10.2.5 Transmembrane protein (channel or receptor)	212
10.3 Mode of action	212
10.3.1 Induction phase	213
10.3.2 Completion phase	213
10.3.3 Multiplication of siRNAs	213
10.3.4 Degeneration of mRNAs	214

## Contents

10.4 RNAi under environmental stresses	214
10.4.1 RNAi in plants under abiotic stress	214
10.4.2 RNAi in plants under biotic stress	219
10.5 Conclusion and future prospects	221
References	222
<b>CHAPTER 11 The Role of Carbohydrates in Plant Resistance to Abiotic Stresses</b>	<b>229</b>
<i>Marina S. Krasavina, Natalia A. Burmistrova and Galina N. Raldugina</i>	
11.1 Introduction	229
11.2 Osmotic balance during the action of unfavorable environmental factors	230
11.2.1 Plant resistance and accumulation of soluble sugars	230
11.2.2 Regulation of the low molecular sugar (glucose, fructose, and sucrose) contents in plants	231
11.2.3 Involvement of di- and oligosaccharides in plant resistance	234
11.2.4 Proline and polyamines as compatible solutes	237
11.2.5 Effect of main stressors on the osmolyte content	240
11.2.6 Ratio between compounds accumulated under stresses	244
11.3 Compatible osmolytes and physiology of resistance	245
11.3.1 Role of osmolytes in the maintenance of macromolecule and membrane structures	245
11.3.2 Sugars and proline affect the generation of ROS under stressful conditions	246
11.3.3 Sugars and proline as signaling molecules	250
11.4 Conclusion and future prospects	253
References	256
<b>CHAPTER 12 Role of Glucosinolates in Plant Stress Tolerance</b>	<b>271</b>
<i>P.S. Variyar, A. Banerjee, Jincy J. Akkarakaran and P. Suprasanna</i>	
12.1 Introduction	271
12.2 Glucosinolate structure, isolation, and analysis	273
12.3 Biosynthesis of glucosinolates	275
12.4 Role of glucosinolates in stress alleviation	276
12.4.1 Biotic stress	279
12.4.2 Abiotic stress	279
12.5 Genes involved in glucosinolate biosynthesis	281
12.6 Gene expression profiling in response to environmental cues	282
12.7 Signaling networks	284
12.8 Metabolic engineering of glucosinolates	285
12.9 Conclusion and future prospects	286
References	286

<b>CHAPTER 13 Plant Responses to Iron, Manganese, and Zinc Deficiency Stress</b>	<b>293</b>
<i>Theocharis Chatzistathis</i>	
13.1 Introduction	293
13.2 Iron deficiency in soils	294
13.3 Soil factors influencing Fe availability and uptake	294
13.4 Physiological roles and symptoms of Fe deficiency in plants	295
13.4.1 Strategy I plants	295
13.4.2 Strategy II plants	296
13.5 Physiological mechanisms and adaptation strategies of plants under Fe deficiency conditions	296
13.6 Manganese deficiency in soils	298
13.7 Soil factors influencing Mn availability	299
13.8 Physiological roles and symptoms of Mn deficiency in plants	300
13.9 Physiological mechanisms and adaptation strategies of plants under Mn deficiency conditions	301
13.10 Zinc deficiency in soils	303
13.11 Soil factors influencing Zn availability	303
13.12 Physiological roles and symptoms of Zn deficiency in plants	304
13.13 Physiological mechanisms and adaptation strategies of plants under Zn deficiency conditions	305
13.14 Conclusion and future perspectives	307
References	307
<b>CHAPTER 14 Role of Trace Elements in Alleviating Environmental Stress</b>	<b>313</b>
<i>Ghader Habibi</i>	
14.1 Introduction	313
14.2 Plant responses to environmental stress	314
14.3 Alleviation of environmental stress by trace elements	314
14.3.1 Zinc	315
14.3.2 Manganese	317
14.3.3 Iron	318
14.3.4 Copper	319
14.3.5 Boron	320
14.3.6 Molybdenum	322
14.3.7 Chlorine	323
14.3.8 Nickel and plant stress responses	323
14.4 Effects of beneficial elements on plant stress responses	324
14.4.1 Sodium	324
14.4.2 Silicon	325

## Contents

14.4.3	Selenium	328
14.4.4	Cobalt and plant stress responses	330
14.4.5	Aluminum and plant stress responses	330
<b>14.5</b>	<b>Conclusion and future prospects</b>	<b>330</b>
	References	331
 <b>CHAPTER 15 Nutritional Stress in Dystrophic Savanna Soils of the Orinoco Basin: Biological Responses to Low Nitrogen and Phosphorus Availabilities</b>		 <b>343</b>
<i>Danilo López-Hernández, Rosa Mary Hernández-Hernández, Ismael Hernández-Valencia and Marcia Toro</i>		
<b>15.1</b>	<b>Introduction</b>	<b>343</b>
<b>15.2</b>	<b>Main environmental features of the savannas of the Orinoco basin</b>	<b>345</b>
15.2.1	Climate in the Orinoco basin	345
<b>15.3</b>	<b>Nutritional stresses in well-drained savannas—nitrogen as a limiting element</b>	<b>349</b>
15.3.1	Main nitrogen inputs	349
15.3.2	Main nitrogen outputs	352
<b>15.4</b>	<b>Nutritional stresses in well-drained savannas—phosphorus as a limiting element</b>	<b>354</b>
15.4.1	Main phosphorus inputs	355
15.4.2	Main phosphorus outputs	356
<b>15.5</b>	<b>Strategies that are used by native savanna plants to enhance nitrogen and phosphorus conservation and uptake</b>	<b>356</b>
15.5.1	Enhancing nitrogen and phosphorus conservation and efficiency	357
15.5.2	Enhancing nitrogen fixation and phosphorus acquisition and uptake	361
<b>15.6</b>	<b>Conclusion and future prospects</b>	<b>367</b>
	Acknowledgments	368
	References	368
 <b>CHAPTER 16 Silicon and Selenium: Two Vital Trace Elements that Confer Abiotic Stress Tolerance to Plants</b>		 <b>377</b>
<i>Mirza Hasanuzzaman, Kamrun Nahar and Masayuki Fujita</i>		
<b>16.1</b>	<b>Introduction</b>	<b>377</b>
<b>16.2</b>	<b>Silicon uptake and transport in plants</b>	<b>378</b>
<b>16.3</b>	<b>Selenium uptake and metabolism in plants</b>	<b>382</b>
<b>16.4</b>	<b>Involvement of silicon and selenium in plant growth, development, and physiology</b>	<b>384</b>
<b>16.5</b>	<b>Effect of silicon and selenium in improving yield of crop plants</b>	<b>387</b>

<b>16.6</b>	Protective roles of silicon and selenium under abiotic stress	388
16.6.1	Salinity	388
16.6.2	Drought	398
16.6.3	High temperature	402
16.6.4	Low temperature	404
16.6.5	Heavy metals	405
16.6.6	UV radiation	408
<b>16.7</b>	Conclusion and future prospects	411
	Acknowledgments	411
	References	412
<b>CHAPTER 17</b>	<b>Herbicides, Pesticides, and Plant Tolerance: An Overview</b>	<b>423</b>
	<i>Qaisar Mahmood, Muhammad Bilal and Sumira Jan</i>	
<b>17.1</b>	Introduction	423
<b>17.2</b>	Global pesticide use	424
<b>17.3</b>	Why pesticide-/herbicide-tolerant plants?	426
<b>17.4</b>	Mechanisms of Herbicide/pesticide tolerance in plants	428
17.4.1	Cytochrome P450-mediated resistance	428
17.4.2	Bioremediation and phytoremediation	432
17.4.3	Antioxidants	435
17.4.4	Metabolites in pesticide/herbicide resistance	436
<b>17.5</b>	The selection process of tolerant plants	437
<b>17.6</b>	Conclusion and future prospects	439
	References	440
<b>CHAPTER 18</b>	<b>Effects of Humic Materials on Plant Metabolism and Agricultural Productivity</b>	<b>449</b>
	<i>Andrés Calderín García, Fernando Guridi Izquierdo and Ricardo Luis Louro Berbara</i>	
<b>18.1</b>	Introduction	449
<b>18.2</b>	General aspects of the characteristics of humic materials and their functions	450
18.2.1	Vermicomposting and its application on soil and plants	450
18.2.2	Some structural characteristics of vermicomposts	450
18.2.3	Chemical composition of liquid humus	454
18.2.4	Some structural characteristics of humic fractions	455
18.2.5	Some basic knowledge about the structure—activity relationship of humic substances	456
<b>18.3</b>	Use of humic materials for sustainable plant production	457
<b>18.4</b>	Conclusion and future prospects	462
	References	462

<b>CHAPTER 19</b>	<b>Climate Changes and Potential Impacts on Quality of Fruit and Vegetable Crops</b>	<b>467</b>
	<i>Leonora M. Mattos, Celso L. Moretti, Sumira Jan, Steven A. Sargent, Carlos Eduardo P. Lima and Mariana R. Fontenelle</i>	
<b>19.1</b>	Introduction	467
<b>19.2</b>	Impacts of climate change on vegetable production systems in Brazil	468
<b>19.3</b>	Harvest and post-harvest	470
<b>19.4</b>	Effects of temperature	470
	19.4.1 Fruit ripening	472
	19.4.2 Quality parameters	473
	19.4.3 Physiological disorders and tolerance to high temperatures	474
<b>19.5</b>	Effects of carbon dioxide exposure	475
	19.5.1 Growth and physiological alterations	476
	19.5.2 Quality parameters	476
<b>19.6</b>	Effects of ozone exposure	477
	19.6.1 Formation and distribution	477
	19.6.2 Physiological effects	477
	19.6.3 Quality parameters	478
<b>19.7</b>	Conclusion and future prospects	479
	References	480
<b>CHAPTER 20</b>	<b>Interplays of Plant Circadian Clock and Abiotic Stress Response Networks</b>	<b>487</b>
	<i>Agnieszka Kietbowicz-Matuk and Jagoda Czarnecka</i>	
<b>20.1</b>	Introduction	487
<b>20.2</b>	Molecular basis of the circadian clock function in plants	488
	20.2.1 Transcriptional regulation	488
	20.2.2 Involvement of alternative splicing in the action and control of the circadian clock	489
	20.2.3 The impact of individual stress on the type of AS of the clock genes	490
	20.2.4 Temperature affects AS of the key clock genes	490
<b>20.3</b>	Molecular basis of the interaction between the clock components and cold response	492
<b>20.4</b>	Crosstalk between the circadian clock and ABA transcriptional networks	493
<b>20.5</b>	Light inputs to the clock	495
<b>20.6</b>	Relationships between ROS transcriptional network and the circadian timekeeping system	496
<b>20.7</b>	Contribution of cellular metabolism to circadian network	497
<b>20.8</b>	Conclusion and future perspectives	499
	References	500

<b>CHAPTER 21</b>	<b>Development of Water Saving Techniques for Sugarcane (<i>Saccharum officinarum</i> L.) in the Arid Environment of Punjab, Pakistan</b>	<b>507</b>
	<i>Abdul Gaffar Sagoo, Abdul Hannan, Muhammad Aslam, Ejaz Ahmed Khan, Amir Hussain, Imam Bakhsh, Muhammad Arif and Muhammad Waqas</i>	
<b>21.1</b>	Introduction	507
<b>21.2</b>	Methodology	508
21.2.1	Soil sampling and determination of moisture content	508
21.2.2	Moisture percentage on volume basis	509
21.2.3	Measurement of depth of irrigation water applied	510
21.2.4	Soil analyses of experimental sites	511
21.2.5	Observations	512
21.2.6	Statistical analysis	512
<b>21.3</b>	Results and discussion	514
21.3.1	Germination percentage	514
21.3.2	Number of shoots ( $\text{m}^{-2}$ )	514
21.3.3	Crop growth rate ( $\text{g m}^{-2} \text{ day}^{-1}$ )	516
21.3.4	Leaf area index	517
21.3.5	Total leaf area duration (days)	518
21.3.6	Net assimilation rate ( $\text{g m}^{-2} \text{ day}^{-1}$ )	519
21.3.7	Plant height (m)	520
21.3.8	Weight per stripped cane (kg)	521
21.3.9	Stripped cane length (m)	522
21.3.10	Cane diameter (cm)	523
21.3.11	Unstripped cane yield ( $\text{t ha}^{-1}$ )	523
21.3.12	Stripped cane yield ( $\text{t ha}^{-1}$ )	525
21.3.13	Harvest index percentage	527
21.3.14	Sugar recovery percentage	527
21.3.15	Sugar yield ( $\text{t ha}^{-1}$ )	530
21.3.16	Net field benefit ( $\text{Rs ha}^{-1}$ )	531
<b>21.4</b>	Conclusion and future prospects	531
