<b>Preface</b>	<b>xiii</b>
<b>Acknowledgements</b>	<b>xv</b>
<b>About the Companion Website</b>	<b>xvii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 The purpose of the book	1
1.1.1 What this book adds	3
1.1.2 Scales of analysis and alternative definitions	3
1.2 Key objectives	4
1.3 Case studies and examples	5
1.4 Why is spatial scale important?	5
1.5 Structure of the book	6
1.6 Further reading	6
References	7
<b>2 Scale in Spatial Data Analysis: Key Concepts</b>	<b>9</b>
2.1 Definitions of spatial scale	9
2.2 Spatial autocorrelation and spatial dependence	11
2.3 Scale dependence	13
2.4 Scale and data models	14
2.5 Spatial scales of inquiry	14
2.6 Scale and spatial data analysis	14
2.7 Scale and neighbourhoods	15
2.8 Scale and space	16
2.9 Scale, spatial data analysis and physical processes	23
2.10 Scale, spatial data analysis and social processes	25
2.11 Summary	26
2.12 Further reading	26
References	26
<b>3 The Modifiable Areal Unit Problem</b>	<b>29</b>
3.1 Basic concepts	29

3.2	Scale and zonation effects	29
3.3	The ecological fallacy	32
3.4	The MAUP and univariate statistics	34
3.4.1	Case study: segregation in Northern Ireland	35
3.4.2	Spatial approaches to segregation	38
3.5	Geographical weighting and the MAUP	38
3.6	The MAUP and multivariate statistics	39
3.6.1	Case study: population variables in Northern Ireland	40
3.7	Zone design	41
3.8	Summary	42
3.9	Further reading	42
	References	42
<b>4</b>	<b>Measuring Spatial Structure</b>	<b>45</b>
4.1	Basic concepts	45
4.2	Measures of spatial autocorrelation	45
4.2.1	Neighbourhood size	47
4.2.2	Spatial autocorrelation and kernel size	47
4.2.3	Spatial autocorrelation and lags	50
4.2.4	Local measures	50
4.2.5	Global and local $I$ and spatial scale	51
4.3	Geostatistics and characterising spatial structure	53
4.3.1	The theory of regionalised variables	54
4.4	The variogram	57
4.4.1	Bias in variogram estimation	59
4.5	The covariance function and correlogram	59
4.6	Alternative measures of spatial structure	60
4.7	Measuring dependence between variables	63
4.8	Variograms of risk	64
4.9	Variogram clouds and h-scatterplots	64
4.10	Variogram models	65
4.11	Fitting variogram models	68
4.12	Variogram case study	70
4.13	Anisotropy and variograms	74
4.13.1	Variogram surfaces	74
4.13.2	Geometric and zonal anisotropy	75
4.14	Variograms and non-stationarity	77
4.14.1	Variograms and long-range trends	77
4.14.2	Variogram non-stationarity	79
4.15	Space-time variograms	82
4.16	Software	83
4.17	Other methods	83
4.18	Point pattern analysis	84
4.18.1	Spatial dependence and point patterns	85
4.18.2	Local $K$ function	91
4.18.3	Cross $K$ function	92

4.19	Summary	97
4.20	Further reading	97
	References	97
<b>5</b>	<b>Scale and Multivariate Data</b>	<b>103</b>
5.1	Regression frameworks	104
5.2	Spatial scale and regression	104
5.3	Global regression	105
5.4	Spatial regression	105
5.5	Regression and spatial data	106
5.5.1	Generalised least squares	106
5.5.2	Spatial autoregressive models	107
5.5.3	Spatially lagged dependent variable models and spatial error models case study	109
5.6	Local regression and spatial scale	111
5.6.1	Spatial expansion method	111
5.6.2	Geographically weighted regression	112
5.6.3	Scale and GWR	115
5.6.4	GWR case study: fixed bandwidths	115
5.6.5	GWR case study: variable bandwidths	116
5.6.6	Bayesian spatially varying coefficient process models	118
5.7	Multilevel modelling	119
5.7.1	Case study	125
5.8	Spatial structure of multiple variables	129
5.9	Multivariate analysis and spatial scale	130
5.10	Summary	131
5.11	Further reading	131
	References	131
<b>6</b>	<b>Fractal Analysis</b>	<b>135</b>
6.1	Basic concepts	135
6.2	Measuring fractal dimension	138
6.2.1	Walking-divider method	139
6.2.2	Box-counting method	140
6.2.3	Variogram method	142
6.3	Fractals and spatial structure	142
6.3.1	Case study: fractal $D$ of land surfaces	143
6.3.2	Case study: local fractal $D$	146
6.3.3	Fractals and topographic form	149
6.4	Other applications of fractal analysis	152
6.4.1	Fractals and remotely sensed imagery	152
6.4.2	Fractals and urban form	153
6.5	How useful is the fractal model in geography?	155
6.6	Summary	155
6.7	Further reading	155
	References	155

<b>7 Scale and Gridded Data: Fourier and Wavelet Transforms</b>	<b>159</b>
7.1 Basic concepts	159
7.2 Fourier transforms	160
7.2.1 Continuous Fourier transform	160
7.2.2 Discrete Fourier transform	161
7.2.3 Fast Fourier transform	163
7.2.4 FFT case study	163
7.2.5 Spectral analysis and the covariance function	165
7.2.6 Spectral analysis case study	167
7.3 Wavelet transforms	168
7.3.1 Continuous wavelet transforms	169
7.3.2 Discrete wavelet transforms	170
7.3.3 The Haar basis functions	171
7.3.4 Other basis functions	172
7.3.5 Fast wavelet transform	173
7.3.6 Two-dimensional wavelet transforms	174
7.4 Wavelet analysis applications and other issues	180
7.5 Summary	180
7.6 Further reading	180
References	181
 <b>8 Areal Interpolation</b>	 <b>183</b>
8.1 Basic concepts	183
8.2 Areal weighting	184
8.3 Using additional data	186
8.3.1 Types of secondary data sources for mapping populations	192
8.4 Surface modelling	193
8.4.1 Population surface case study	195
8.5 Other approaches to changing support	196
8.6 Summary	197
8.7 Further reading	198
References	198
 <b>9 Geostatistical Interpolation and Change of Support</b>	 <b>201</b>
9.1 Basic concepts	201
9.2 Regularisation	201
9.2.1 Regularisation with an irregular support	204
9.3 Variogram deconvolution	205
9.3.1 Variogram deconvolution for irregular supports	206
9.3.2 Variography and change of support	208
9.4 Kriging	210
9.4.1 Punctual kriging	210
9.4.2 Poisson kriging	212
9.4.3 Factorial kriging	213
9.4.4 Factorial kriging case study	215

---

## CONTENTS

---

9.4.5	Kriging in the presence of a trend	215
9.4.6	Cokriging	222
9.4.7	Kriging with an external drift and other techniques	222
9.4.8	Interpreting the kriging variance	223
9.4.9	Cross-validation	223
9.4.10	Conditional simulation	224
9.4.11	Comparison of kriging approaches	224
9.5	Kriging and change of support	226
9.5.1	Block kriging	226
9.5.2	Area-to-point kriging	227
9.5.3	Case study	229
9.6	Assessing uncertainty and optimal sampling design	231
9.6.1	Nested sampling	231
9.6.2	Assessing optimal sampling design	232
9.6.3	Optimal spatial resolution	235
9.6.4	Other approaches to optimal sampling design	236
9.7	Summary	236
9.8	Further reading	236
	References	236
<b>10</b>	<b>Summary and Conclusions</b>	<b>241</b>
10.1	Overview of key concepts and methods	241
10.2	Problems and future directions	243
10.3	Summary	245
	References	245
<b>Index</b>		<b>247</b>
