<i>Preface</i>	<i>page vii</i>
1 Introduction	1
1.1 Fundamental stellar properties	1
1.2 Determination of stellar mass	4
1.3 Kinetic theory	7
1.4 Special relativity	12
1.5 Image processing	21
Exercises	27
2 Stellar atmospheres	29
2.1 Radiative transfer and the flow of photons through matter	29
2.2 Formal solution of radiative transfer	34
2.3 The gray-body approximation	40
2.4 Continuous opacity in a real hydrogen star	48
2.5 The case of spectrum lines	51
Exercises	57
3 Stellar interiors	59
3.1 The hydrostatic model	59
3.2 The polytropic star	63
3.3 Stellar populations	70
3.4 The virial theorem and stellar structure	78
3.5 Fusion in the stellar core	87
3.6 Beyond the polytropic model	96
Exercises	102
4 Extreme classical stars	104
4.1 Atmospheres beyond local thermodynamic equilibrium	104
4.2 Expanding atmospheres and the Sobolev method	112
4.3 Properties of gas degeneracy	124
4.4 White dwarfs	129
4.5 Neutron stars	137
Exercises	141
5 General relativity and applications	143
5.1 From special relativity to general relativity	143

5.2	Mathematical toolbox	148
5.3	Einstein's field equations	154
5.4	Solving Einstein's equations	160
5.5	Tests of general relativity	167
5.6	Gravitational waves	178
	Exercises	185
6	Binaries and clusters	186
6.1	Variational mechanics	186
6.2	The N-body problem	193
6.3	The solar system	198
6.4	The Trapezium system	206
6.5	Chaotic systems	213
	Exercises	218
7	Astrophysical plasmas	220
7.1	Charges in cold plasmas	220
7.2	Photons in cold plasmas	225
7.3	Generalized magnetoionic radio wave propagation	233
7.4	Pulsar signals as probes of the interstellar medium	238
7.5	Warm plasmas	244
7.6	Solar wind	254
	Exercises	260
8	Galaxies	263
8.1	The existence of dark matter	263
8.2	Revisiting the Trapezium cluster	272
8.3	The Hénon–Heiles equations	281
8.4	The central black hole of the Milky Way	283
8.5	Spiral density waves	289
8.6	The interplay of gas and dust	294
8.7	Galactic mergers	306
	Exercises	307
9	Cosmic structures	309
9.1	The Hubble law	309
9.2	Quasars and radio galaxies	314
9.3	Synchrotron radiation	321
9.4	Distribution of galaxies	326
9.5	Extragalactic bending of light	333
9.6	The cosmic microwave background	339
9.7	Cosmological models	346
	Exercises	354
	<i>References</i>	357
	<i>Index</i>	369
