Preface *page* xiii
Acknowledgments xvii

1. **Introduction** 1
   1.1. Adhesive Particle Flow 1
   1.2. Dimensionless Parameters and Related Simplifications 5
      1.2.1. Stokes Number 5
      1.2.2. Density Ratio 7
      1.2.3. Length Scale Ratios 8
      1.2.4. Particle Reynolds Number 10
      1.2.5 Particle Concentration and Mass Loading 11
      1.2.6. Bagnold Number 14
      1.2.7. Adhesion Parameter 15
   1.3. Applications 15
      1.3.1. Fibrous Filtration Processes 15
      1.3.2. Extraterrestrial Dust Fouling 18
      1.3.3. Wet Granular Material 21
      1.3.4. Blood Flow 23
      1.3.5. Aerosol Reaction Engineering 25

2. **Modeling Viewpoints and Approaches** 29
   2.1. A Question of Scale 29
   2.2. Macroscale Particle Methods 30
      2.2.1. Discrete Parcel Method 30
      2.2.2. Population Balance Method 32
   2.3. Mesoscale Particle Methods 34
      2.3.1. Molecular Dynamics 36
      2.3.2. Brownian Dynamics 37
      2.3.3. Dissipative Particle Dynamics 38
      2.3.4. Discrete Element Method 40
   2.4. Microscale Dynamics of Elastohydrodynamic Particle Collisions 41

2.4.1. Microscale Simulations of Elastohydrodynamic Interactions 42
2.4.2. Experimental Results for Two-Particle Collisions 44
2.4.3. Simplified Models for Restitution Coefficient in a Viscous Fluid 46

3. **Contact Mechanics without Adhesion** 51
3.1. Basic Concepts 51
3.2. Hertz Theory: Normal Elastic Force 54
3.2.1. Derivation 55
3.2.2. Two-Particle Collision 56
3.3. Normal Dissipation Force 58
3.3.1. Physical Mechanisms 58
3.3.2. Models for Solid-Phase Dissipation Force 61
3.4. Hysteretic Models for Normal Contact with Plastic Deformation 66
3.5. Sliding and Twisting Resistance 69
3.5.1. Physical Mechanisms of Sliding and Twisting Resistance 69
3.5.2. Sliding Resistance Model 72
3.5.3. Twisting Resistance Model 73
3.6. Rolling Resistance 74
3.6.1. Rolling Velocity 74
3.6.2. Physical Mechanism of Rolling Resistance 77
3.6.3. Model for Rolling Resistance 78

4. **Contact Mechanics with Adhesion Forces** 81
4.1. Basic Concepts and the Surface Energy Density 82
4.2. Contact Mechanics with van der Waals Force 86
4.2.1. Models for Normal Contact Force 86
4.2.2 Normal Dissipation Force and Its Validation 96
4.2.3. Effect of Adhesion on Sliding and Twisting Resistance 98
4.2.4. Effect of Adhesion on Rolling Resistance 99
4.3. Electrical Double-Layer Force 100
4.3.1. Stern and Diffuse Layers 101
4.3.2. Ionic Shielding of Charged Particles 102
4.3.3. DLVO Theory 103
4.4. Protein Binding 107
4.5. Liquid Bridging Adhesion 111
4.5.1. Capillary Force 111
4.5.2. Effect of Roughness on Capillary Cohesion 116
4.5.3. Viscous Force 117
4.5.4. Rupture Distance 118
4.5.5. Capillary Torque on a Rolling Particle 118
4.6. Sintering Force 120
4.6.1. Sintering Regime Map 121
4.6.2. Approximate Sintering Models 123
4.6.3. Hysteretic Sintering Contact Model 124

5. **Fluid Forces on Particles** 130
5.1. Drag Force and Viscous Torque 131
5.1.1. Effect of Flow Nonuniformity 131
5.1.2. Effect of Fluid Inertia 132
5.1.3. Effect of Surface Slip 135
5.2. Lift Force 138
5.2.1. Saffman Lift Force 138
5.2.2. Magnus Lift Force 140
5.3. Forces in Unsteady Flows 141
5.3.1. Pressure-Gradient (Buoyancy) Force 141
5.3.2. Added Mass Force 142
5.3.3. History Force 143
5.4. Brownian Motion 145
5.5. Scaling Analysis 147
5.6. Near-Wall Effects 151
5.6.1. Drag Force 151
5.6.2. Lift Force 154
5.7. Effect of Surrounding Particles 156
5.7.1. Flow through Packed Beds 159
5.7.2. Flow through Fluidized Beds 159
5.7.3. Simulations 161
5.7.4. Effect of Particle Polydispersity 164
5.8. Stokesian Dynamics 165
5.8.1. Example for Falling Cluster of Particles 165
5.8.2. General Theory 169
5.9. Particle Interactions with Acoustic Fields 170
5.9.1. Orthokinetic Motion 172
5.9.2. Acoustic Wake Effect 173

6. **Particle Dispersion in Turbulent Flows** 182
6.1. Particle Motion in Turbulent Flows 182
6.2. Particle Drift Measure 185
6.3. Particle Collision Models 188
6.3.1. Collision Mechanisms 188
6.3.2. Orthokinetic Collisions (Small Stokes Numbers) 190
6.3.3. Accelerative-Independent Collisions (Large Stokes Numbers) 192
6.3.4. Accelerative-Correlative Collisions (Intermediate Stokes Numbers) 192
6.4. Dynamic Models for Particle Dispersion 195
6.5. Dynamic Models for Particle Clustering 199

7. **Ellipsoidal Particles** 206
7.1. Particle Dynamics 207
7.2. Fluid Forces 209

7.3. Collision Detection and Contact Point Identification 211
7.3.1. Two-Dimensional Algorithms 212
7.3.2. Algorithms Based on a Common Normal Vector 213
7.3.3. Algorithms Based on Geometric Level Surfaces 214
7.4. Contact Forces 217
7.4.1. Geometry of Colliding Particles 217
7.4.2. Hertz Theory for Ellipsoidal Particles 218

8. **Particle Interactions with Electric and Magnetic Fields** 223
8.1. Electric Field Forces and Torques 224
8.1.1. Coulomb Force and Dielectrophoresis 224
8.1.2. Dielectrophoresis in an AC Electric Field 227
8.1.3. Application to Particle Separation and Focusing 229
8.2. Mechanisms of Particle Charging 231
8.2.1. Field Charging 232
8.2.2. Diffusion Charging 233
8.2.3. Contact Electrification 235
8.2.4. Contact De-electrification 237
8.3. Magnetic Field Forces 237
8.4. Boundary Element Method 239
8.4.1. General Boundary Element Method 239
8.4.2. Pseudoimage Method for Particles Near an Electrode Surface 242
8.4.3. Problems with DEP Force Near Panel Edges 243
8.5. Fast Multipole Method for Long-Range Forces 245
8.6. Electrostatic Agglomeration Processes 249
8.6.1. Relative Importance of Electrostatic and van der Waals Adhesion Forces 249
8.6.2. Particle Chain Formation 250

9. **Nanoscale Particle Dynamics** 256
9.1. Continuum and Free-Molecular Regimes 257
9.1.1. Drag Force 258
9.1.2. Brownian Force 260
9.1.3. Mean-Free-Path of Nanoparticles 261
9.1.4. Thermophoretic Force 262
9.1.5. Competition between Diffusion and Thermophoresis during Deposition 265
9.2. Nanoparticle Interactions 266
9.2.1. Collision of Large Nanoparticles 266
9.2.2. Collision of Small Nanoparticles 269
9.2.3. Long-Range Interparticle Electrostatic Forces 271
9.3. Time Scales of Nanoparticle Collision-Coalescence Mechanism 274
9.3.1. Time Scale of Particle Collisions 275
9.3.2. Time Scale of Nanoparticle Sintering 278

10. **Computer Implementation and Data Analysis** 286
10.1. Particle Time Stepping 286
10.1.1. Numerical Stability 287
10.1.2. Multiscale Time-Stepping Approaches 288
10.2. Flow in Complex Domains 289
10.2.1. Particle Search Algorithm 290
10.2.2. Level Set Distance Function 293
10.3. Measures of Local Concentration 294
10.4. Measures of Particle Agglomerates 297
10.4.1. Particle Count and Orientation Measures 297
10.4.2. Agglomerate Orientation Measures 298
10.4.3. Equivalent Agglomerate Ellipse 298
10.4.4. Agglomerate Fractal Dimension 300
10.4.5. Particle Packing Measures 302

11. **Applications** 305
11.1. Particle Migration in Tube and Channel Flows 305
11.1.1. Inertial Particle Migration in Straight Tubes 306
11.1.2. Collision-Induced Particle Migration 307
11.1.3. Particle Migration in the Presence of Wavy Tube Walls 309
11.2. Particle Filtration 311
11.2.1. Fiber Filtration 312
11.2.2. Enhancement of Filtration Rate by Particle Mixtures 316
11.2.3. Enhancement of Filtration Rate by Electric Fields 318
11.3. Rotating Drum Mixing Processes 320
11.3.1. Flow Regimes 320
11.3.2. Mixing and Segregation 322
11.3.3. Cohesive Mixing and Segregation 326
11.4. Dust Removal Processes 328
11.4.1. Hydrodynamic Dust Mitigation 328
11.4.2. Electric Curtain Mitigation for Charged Particles 331
11.5. Final Comments 332
