<b>PART I – EVOLUTION OF PARASITISM AND LIFE HISTORY ADAPTATIONS</b>	
<b>1. The Genome of <i>Pristionchus pacificus</i> and the Evolution of Parasitism</b>	<b>1</b>
<i>Ralf J. Sommer and Akira Ogawa</i>	
Introduction	1
Theoretical Considerations	1
Life-history Adaptations	2
<i>P. pacificus</i> as a Case Study	4
Adaptations I: Genome Evolution	6
Adaptations II: Nematode–Insect Interactions	8
Adaptations III: Evolution of Dauer Formation	8
Adaptations IV: Regulation of Mouth-form Dimorphism	11
Concluding Remarks	12
References	12
<b>2. Life-history Plasticity and Responses to Host Defence</b>	<b>15</b>
<i>Mark E. Viney</i>	
General Principles	15
Phenotypic Plasticity: Some Conceptual Issues	16
Helminth Life-history Trait Variation	17
Helminth Life-history Trait Plasticity	18
Analogies with Life-history Traits of Free-living Nematodes	19
Helminth Life-history Trait Plasticity: Inside Hosts	21
Evolution of Helminth Life-history Traits	25

Conclusion	26
References	26
<b>3. The Complex Armoury of Plant-parasitic Nematodes</b>	<b>30</b>
<i>David McK. Bird and Peter M. DiGennaro</i>	
Introduction	30
An Exposition of Our Protagonists, and an Introduction to Some Terminology	31
The Molecular Basis for Parasitism by PPN	33
Conclusions	38
References	39
<b>4. Innate Immunity in <i>Caenorhabditis elegans</i> and Other Nematodes</b>	<b>42</b>
<i>Marie-Noëlle Rosso, Nathalie Pujol and Jonathan J. Ewbank</i>	
Introduction	42
The life Cycle and Natural Habitat of Six Nematode Species	44
Immune Response in <i>C. elegans</i>	45
Comparative Analysis of Nematode Innate Immune Systems	53
Conclusions	59
Acknowledgements	60
Note Added in Proof	61
References	61
<b>PART II – MODULATION OF THE IMMUNE RESPONSE: BENEFITS FOR PARASITE AND HOST</b>	
<b>5. Nematodes and Regulatory T cells</b>	<b>67</b>
<i>Katherine A. Smith and Rick M. Maizels</i>	
Introduction	67
Regulatory T Cells	68
Role of Regulatory T Cells in Mouse Models of Filarial Infection	69
Regulatory T cells in Intestinal Nematode Infections:	
The Case of <i>Heligmosomoides polygyrus</i>	70
Tregs in Other Mouse Intestinal Nematodes	71
Role of Tr1 and IL-10 in Nematode Infections	72
Natural (Thymic) or Adaptive (Induced) Tregs?	72
Evidence of Regulatory T Cells in Human Filarial Nematode Infection	73
Tregs in Human Intestinal Nematode Infections	74
Role of Regulatory IL-10 in Human Infections	75
Induction of Regulatory T Cells	75
Regulatory T Cell Therapy: The Future?	76
Acknowledgement	76
References	76
<b>6. The Alternatively Activated Macrophage</b>	<b>84</b>
<i>Dominik Ruckerl, Stephen Jenkins and Judith E. Allen</i>	
Introduction	84
Macrophages in Nematode Infection	84
Macrophages, Th2 Immunity and Metabolism	91
Macrophages as Effector Cells	93
Macrophages, Tissue Repair and Homeostasis	94
Summary	96

Acknowledgements	96
References	97
<b>7. Regulation of Immunity and Inflammation Following Intestinal Helminth Infection</b>	<b>106</b>
<i>Matthew R. Hepworth, Richard K. Grencis and David Artis</i>	
Introduction	106
Gastrointestinal Nematodes	106
Innate Immunity to Nematodes: New Mechanisms and Novel Cell Types	107
Immuno-regulation During GI Nematode Infection	112
Beyond Th2 Responses	115
Effector Mechanisms of Nematode Clearance from the GI Tract	118
Summary	121
Acknowledgements	121
Note Added in Proof	121
References	122
<b>8. Influence of Nematodes on <i>Mycobacterium tuberculosis</i> and Related Mycobacteriae: From Disease Outcome to Immune Responses</b>	<b>130</b>
<i>Subash Babu and Thomas B. Nutman</i>	
Introduction	130
Nematode-induced Immunoregulation	130
Population-based Assessments of Nematode/Mycobacterial Co-infections	133
<i>In vitro</i> Responses to PPD/Mtb/BCG in Nematode Infections	134
Nematode Modulation of Immune Responses in Mycobacterial Infections	135
Mechanisms Underlying the Regulation of Mycobacteria-specific Responses by Nematodes	136
Summary	138
References	138
<b>9. Modulation of Autoimmune and Allergic Responses by Defined Nematode Molecules</b>	<b>144</b>
<i>William Harnett, Lamyaa Al-Riyami, Justyna Rzepecka and Margaret M. Harnett</i>	
Introduction	144
Evidence that Parasitic Nematodes Can Protect Humans from Allergy and Autoimmunity	144
Evidence from Animal Studies	145
How Are Nematodes Protective?	146
Identity of Molecules Involved in Immunomodulation in Animal Models and Their Mechanism of Action	147
Concluding Remarks	151
References	151
<b>PART III – GENETICS DIVERSITY - HOST VERSUS PARASITE</b>	
<b>10. Genetics and Mechanisms of Drug Resistance in Nematodes</b>	<b>156</b>
<i>Roger Prichard and Anne Lespine</i>	
Introduction	156
Mechanisms of Action of Major Anthelmintic Classes	157
Changes in Drug Receptors That Can Lead to Anthelmintic Resistance	162

ABC Transporters and Anthelmintic Resistance in Nematodes	171
Prospect for Developing Strategies to Increase ML Activity and Reduce Resistance by Using ABC Transporter Inhibitors	174
Conclusions	175
References	176
<b>11. Genetics of Resistance to Hookworm Infection</b>	<b>184</b>
<i>Rupert J. Quinnell and Jerzy M. Behnke</i>	
Introduction	184
Evidence for Genetic Control of Human Hookworm Burden	185
Evidence from Animal Models	189
Gene Identification Studies	193
Do Mouse Models Inform Our Understanding of Human Infection?	199
Genetic Control of Co-infection?	200
Concluding Remarks	201
Acknowledgements	202
References	202
<b>PART IV – FIGHTING BACK - THERAPEUTICS, VACCINES</b>	
<b>12. Vaccination Against Filarial Nematodes</b>	<b>209</b>
<i>Sara Lustigman and Thomas R. Klei</i>	
Introduction	209
The Significance of a Vaccine	210
Immunologic Support for Vaccines and Synergy with Chemotherapy	212
Protective Immunity	212
The Ov and LF Vaccine Molecules	219
Can Vaccines Against Ov and LF be Developed?	222
A Proposed Dual Rodent Vaccine Model	227
The Choice of Adjuvants for Filarial Vaccines	229
The Opportunities and Challenges	230
Concluding Remarks	232
References	233
<b>13. A Vaccine Against <i>Haemonchus contortus</i>: Current Status and Future Possibilities</b>	<b>245</b>
<i>David Knox</i>	
Introduction	245
The Major Vaccine Candidates and Blood Meal Digestion	246
Vaccination Against <i>Haemonchus</i> : General Considerations	247
Proteases Targeted as Vaccine Candidates	248
Protein Conformation and Protection?	252
Glycan and Protection?	253
Expression of <i>H. contortus</i> Proteins in <i>C. elegans</i>	255
RNA Interference: The Potential for Screening for Important Vaccine Targets	256
Concluding Remarks	256
References	257
<b>14. Nematodes and Human Therapeutic Trials</b>	<b>261</b>
<i>David E. Elliott, David Pritchard, Alan Brown and Joel V. Weinstock</i>	
Autoimmunity in a World without Helminths	261
Animal Models of Protection and Treatment	264

Mechanisms of Protection	264
Communication Between Helminths and Mucosal Immunity	267
Persistence of Protection	269
Clinical Trials of Helminth Therapy	269
Conclusion	272
References	273

## **PART V – NEMATODE SPECIALITIES**

<b>15. Nematode Neuropeptide Communication Systems</b>	<b>279</b>
<i>Angela Mousley, Paul McVeigh, Johnathan J. Dalzell and Aaron G. Maule</i>	
Introduction	279
Insulin-like Peptides	280
INS Receptors	281
INS Function	281
Neuropeptide-like Proteins	282
NLP Receptors	284
NLP Function	285
FMRFamide-like Peptides	287
FLP Expression	288
FLP Receptors	291
FLP Function and Pharmacology	295
Concluding Remarks	299
References	299
<b>16. The <i>Wolbachia</i> Bacterial Endosymbionts of Filarial Nematodes</b>	<b>308</b>
<i>Jeremy M. Foster, Achim Hoerauf, Barton E. Slatko and Mark J. Taylor</i>	
Introduction	308
<i>Wolbachia</i> Symbiotic Relationships	308
Antibiotic Treatment of Filarial Nematodes	312
<i>Wolbachia</i> as an Activator of Immunity and Driver of Disease Pathogenesis	316
Genomic Clues to the Molecular Interactions between <i>Wolbachia</i> and Filarial Nematodes	321
Concluding Remarks	326
Acknowledgements	327
References	327
<b>17. The Nematode Cuticle: Synthesis, Modification and Turnover</b>	<b>337</b>
<i>Antony P. Page,</i>	
Introduction	337
The Cuticle	337
Modifications that Occur in the Endoplasmic Reticulum	339
Modifications that Occur Outside the Endoplasmic Reticulum	341
The Enzymology of the Moulting Process	343
The Surface Coat	346
Concluding Remarks	347
Acknowledgements	347
References	347

---

<b>18. Proteases of Nematodes: From Free-living to Parasite</b>	<b>351</b>
<i>Collette Britton</i>	
Introduction	351
Metalloproteases	352
Serine Proteases	360
Aspartic Proteases	362
Cysteine Proteases	363
Concluding Remarks	368
Acknowledgements	369
References	369
<b>19. Nematode Allergens</b>	<b>375</b>
<i>Svenja Steinfelder, Sebastian Rausch, Richard Lucius and Susanne Hartmann</i>	
Introduction	375
Characterized Nematode Allergens	381
Nematodes and Allergy: the Two Sides of the Coin	384
Alternate Activities of Nematode Allergens	387
Conclusion	388
References	389
<b>20. The Unusual Lipid-binding Proteins of Nematodes: NPAs, nemFABPs and FARs</b>	<b>397</b>
<i>Malcolm W. Kennedy, Betina Corsico, Alan Cooper and Brian O. Smith</i>	
Introduction	397
The Nematode Polyprotein Antigens/Allergens (NPAs): History	398
The Nematode Polyprotein Antigens/Allergens (NPAs): Structures	400
The Nematode FABPs (nemFABPs): History	402
The Nematode FABPs (nemFABPs): Structure	403
The Nematode Fatty Acid- and Retinol-binding Proteins (FARs): History	405
The Nematode Fatty Acid- and Retinol-binding Proteins (FARs): Structures	406
Concluding Remarks	407
Acknowledgements	408
References	408
<b>Index</b>	<b>413</b>
