Part I Modelling, Dynamical Systems and Input-Output Representation

1	Basics in Dynamical System Modelling	3
1.1	Introduction	3
1.2	Balance Equations and Phenomenological Laws	3
1.2.1	Balance Equations	4
1.2.2	Phenomenological Laws	5
1.3	Basic Laws and Principles of Physics	6
1.3.1	Conservation of Mass	7
1.3.2	Principles of Thermodynamics	7
1.3.3	Point Mechanics	8
1.3.4	Electromagnetism Equations	8
1.4	Applications in Solid Mechanics, Fluid Mechanics and Electricity	9
1.4.1	Solid Mechanics	9
1.4.2	Fluid Mechanics	14
1.4.3	Elementary Models of Electrical Circuits	16
1.5	Conclusion	16
2	Finite Dimensional State-Space Models	17
2.1	Introduction	17
2.2	Definitions of State-Space Models	17
2.3	Examples of Modelling	21
2.3.1	The Inverted Pendulum	21
2.3.2	A Model of Wheel on a Plane	23
2.3.3	An Aircraft Model	26
2.3.4	Vibrations of a Beam	28
2.3.5	An RLC Electrical Circuit	29
2.3.6	An Electrical Motor	30
2.3.7	Chemical Kinetics	31
2.3.8	Growth of an Age-Structured Population	33
2.3.9	A Bioreactor	34

2.4	Dynamical Systems	35
2.5	Linear Dynamical Systems	39
2.6	Exercises.	42
3	Input-Output Representation	45
3.1	Introduction.	45
3.2	Input-Output Representation	46
3.2.1	Definitions and Properties.	46
3.2.2	Characteristic Responses and Transfer Matrices.	47
3.3	Single-Input Single-Output l.c.s. Systems	50
3.4	Stability and Poles: Routh's Criteria.	52
3.5	Zeros of a Transfer Function.	53
3.6	Controller Synthesis: The PID Compensator	55
3.6.1	First-Order Open-Loop System	57
3.6.2	Open-Loop Second-Order System	57
3.7	Graphical Methods: Gain and Phase Margins—Stability-Precision Dilemma	57
3.8	Lead and Lag Phase Compensators	63
3.9	Exercises.	65
 Part II Stabilization by State-Space Approach		
4	Stability of an Equilibrium Point	71
4.1	Introduction.	71
4.2	Stability and Asymptotic Stability of an Equilibrium Point	71
4.3	The Case of Linear Dynamical Systems	73
4.4	Stability Classification of the Zero Equilibrium for Linear Systems in the Plane	75
4.5	Tangent Linear System and Stability	80
4.6	Lyapunov Functions and Stability	84
4.7	Sketch of Stabilization by Linear State Feedback.	89
4.8	Exercises.	93
5	Continuous-Time Linear Dynamical Systems	97
5.1	Introduction.	97
5.2	Definitions and Examples	98
5.3	Stability of Controlled Systems	100
5.4	Controllability. Regulator	101
5.4.1	Controllability	101
5.4.2	Systems Equivalence. Controllable Canonical Form	104
5.4.3	Regulator	107

- 5.5 Observability. Observer 108
- 5.6 Observer-Regulator Synthesis. The Separation Principle 114
- 5.7 Links with the Input-Output Representation 116
 - 5.7.1 Impulse Response and Transfer Matrix. 116
 - 5.7.2 From Input-Output Representation
to State-Space Representation 118
 - 5.7.3 Stability and Poles 119
- 5.8 Local Stabilization of a Nonlinear Dynamical System
by Linear Feedback 120
- 5.9 Tracking Reference Trajectories. 122
 - 5.9.1 Stabilization of an Equilibrium Point
of a Linear Dynamical System 122
 - 5.9.2 Stabilization of a Slowly Varying Trajectory. 123
 - 5.9.3 Stabilization of Any State Trajectory 125
- 5.10 Practical Set Up. Stability-Precision Dilemma 125
 - 5.10.1 Steps for the Elaboration of a Control Law. 125
 - 5.10.2 Sensitivity to Model Parameter Uncertainty:
Precision. 127
 - 5.10.3 Sensitivity to Input Delay: Stability 129
- 5.11 Exercises. 130
- 6 Discrete-Time Linear Dynamical Systems 133**
 - 6.1 Introduction. 133
 - 6.2 Exact Discretization of a Continuous-Time Linear
Dynamical System 134
 - 6.3 Stability of Discrete-Time Classical Dynamical Systems. 137
 - 6.3.1 Stability of an Equilibrium Point 137
 - 6.3.2 Case of Discrete-Time Linear Dynamical Systems. 139
 - 6.4 Stability of Controlled Discrete-Time Linear
Dynamical Systems 143
 - 6.5 Controllability. Regulator 144
 - 6.6 Observability. Observer 146
 - 6.7 Observer-Regulator Synthesis. Separation Principle 148
 - 6.8 Choice of the Sampling Period 150
 - 6.9 Links with the Input-Output Representation 151
 - 6.9.1 Impulse Response, Transfer Matrix and Realization 151
 - 6.9.2 Stability and Poles. Jury Criterion 153
 - 6.9.3 Zeros of a Discrete-Time Scalar l.c.s. System 154
 - 6.9.4 Relation Between an l.c.s. System in Continuous-Time
and the Exact Discretized 155
 - 6.10 Local Stabilization of a Nonlinear Dynamical System
by a Control Law in Discrete-Time. 159

6.11	Practical Set Up	163
6.12	Exercises.	163
7	Quadratic Optimization and Linear Filtering	165
7.1	Introduction.	165
7.2	Quadratic Optimization and Controller Modes Placement	166
7.2.1	Optimization in Finite Horizon	166
7.2.2	Optimization in Infinite Horizon. Links with Controllability	169
7.2.3	Implementation	171
7.3	Kalman-Bucy Filter and Observer Modes Placement	171
7.3.1	The Kalman-Bucy Filter	173
7.3.2	Convergence of the Filter. Links with Observability.	178
7.4	Formulas in the Continuous-Time Case	179
7.4.1	Optimization in Finite Horizon	180
7.4.2	Optimization in Infinite Horizon. Links with Controllability	181
7.4.3	Asymptotic Observer	184
7.5	Practical Set up	184
7.6	Exercises.	184

Part III Disturbance Rejection and Polynomial Approach

8	Polynomial Representation	191
8.1	Introduction.	191
8.2	Definitions	194
8.3	Results on Polynomial Matrices.	196
8.3.1	Elementary Operations: Hermite and Smith Matrices	197
8.3.2	Division and Bezout Identities.	200
8.4	Poles and Zeros. Stability	201
8.5	Equivalence Between Linear Differential Systems	203
8.6	Observability and Controllability	205
8.6.1	Controllability	205
8.6.2	Observability.	209
8.7	From the State-Space Representation to the Polynomial Controller and Observable Forms.	212
8.7.1	From the State-Space Representation to the Polynomial Observer Form	212
8.7.2	From the Polynomial Observer Form to the Polynomial Controller Form	213
8.8	Closed-Loop Transfer Functions from the Input and the Disturbances to the Outputs	215

8.9	Affine Parameterization of the Controller and Zeros Placement with Fixed Poles.	217
8.10	The Inverted Pendulum Example	218
8.10.1	Computation of the Polynomial Observer and Controller Forms	218
8.10.2	Computation of the Closed-Loop Transfer Functions	219
8.10.3	Affine Parameterization of the Controller	220
8.10.4	Placement of Regulation Zeros with Fixed Poles	222
8.11	Exercises.	224
Appendix A: The Discrete-Time Stationary Riccati Equation		227
Appendix B: Laplace Transform and z-Transform		233
Appendix C: Gaussian Vectors		239
Appendix D: Bode Diagrams		245
