<i>Preface and acknowledgments</i>	<i>page xi</i>
<i>The book website www.cambridge.org/smylie</i>	<i>xiii</i>
1 Introduction and theoretical background	1
1.1 Scalar, vector and tensor analysis	1
1.2 Separation of vector fields	25
1.3 Vector spherical harmonics	27
1.4 Elasticity theory	33
1.5 Linear algebraic systems	74
1.6 Interpolation and approximation	79
2 Time sequence and spectral analysis	93
2.1 Time domain analysis	94
2.2 Linear optimum Wiener filters	105
2.3 Frequency domain analysis	119
2.4 Fourier series and transforms	154
2.5 Power spectral density estimation	171
2.6 Maximum entropy spectral analysis	198
3 Earth deformations	212
3.1 Equilibrium equations	212
3.2 The reciprocal theorem of Betti	215
3.3 Radial equations: spheroidal and torsional	217
3.4 Dynamical equations	223
3.5 Solutions near the geocentre	231
3.6 Numerical integration of the radial equations	245
3.7 Fundamental, regular solutions in the inner core	256

4	Earth's rotation: observations and theory	273
4.1	Reference frames	273
4.2	Polar motion and wobble	274
4.3	The dynamics of polar motion and wobble	294
4.4	Nutation and motion of the celestial pole	307
5	Earth's figure and gravitation	323
5.1	Historical development	323
5.2	External gravity and figure	325
5.3	Equilibrium theory of the internal figure	341
5.4	Gravity coupling	371
6	Rotating fluids and the outer core	386
6.1	The inertial wave equation	386
6.2	Dynamics of the fluid outer core	398
6.3	Scaling of the core equations	407
6.4	Compressibility and density stratification	412
7	The subseismic equation and boundary conditions	420
7.1	The subseismic wave equation	420
7.2	Deformation of the shell and inner core	423
8	Variational methods and core modes	445
8.1	A subseismic variational principle	445
8.2	Representation of the functional	450
8.3	Finite element support functions	453
8.4	Boundary conditions and constraints	456
8.5	Numerical implementation and results	459
8.6	Rotational splitting and viscosity	467
8.7	A viscosity profile for the outer core	478
9	Static deformations and dislocation theory	482
9.1	The elasticity theory of dislocations	482
9.2	The theory for realistic Earth models	497
9.3	Changes in the inertia tensor and the secular polar shift	509
Appendix A	Elementary results from vector analysis	514
A.1	Vector identities	514
A.2	Vector calculus identities	514
A.3	Integral theorems	516
Appendix B	Properties of Legendre functions	517
B.1	Recurrence relations	518
B.2	Evaluation of Legendre functions	519

<i>Appendix C</i>	Numerical Earth models	522
C.1	The Earth models	522
	<i>References</i>	531
	<i>Fortran index</i>	536
	<i>Subject index</i>	537
