

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<hr/>		
<b>2</b>	<b>Some elements of vector analysis</b>	<b>7</b>
<hr/>		
	2.1 Simple numerical vectors	7
	2.2 Vector fields	12
	2.3 Vector operators	13
	2.4 The three major coordinate systems	13
	2.5 Some vector identities	17
	2.6 General orthogonal coordinate systems	20
	2.7 Transformations between coordinate systems	27
<b>3</b>	<b>The electrostatic field</b>	<b>33</b>
<hr/>		
	3.1 Introduction	33
	3.2 The electrostatic field	35
	3.3 Volume-, surface-, and line-charge densities	37
	3.4 Gauss's law for the electric field in free space	43
	3.5 Electrostatic field lines	50
	3.6 Line integrals in vector fields	53
	3.7 The gradient of a scalar field	56
<b>4</b>	<b>The electrostatic potential</b>	<b>62</b>
<hr/>		
	4.1 Definition	62
	4.2 Potentials for elementary charge distributions	65
	4.3 Potential and field of an elementary dipole	67

<b>5</b>	<b>The transition towards Maxwell's equations for electrostatics</b>	<b>75</b>
	5.1 Introduction	75
	5.2 The divergence of a vector field and Gauss's divergence theorem	75
	5.3 The curl of a vector field; Stokes's theorem	80
	5.4 Irrotational (conservative) and solenoidal fields	83
	5.5 Maxwell's equations for electrostatic fields	85
<b>6</b>	<b>Electrostatic fields in material media</b>	<b>90</b>
	6.1 Introduction	90
	6.2 Metallic conductors	92
	6.3 Induced charge separation in conductors	94
	6.4 Dielectric materials	98
<b>7</b>	<b>Electrostatic energy, electromechanical force, and capacitance</b>	<b>118</b>
	7.1 $N$ point charges	118
	7.2 Continuous charge distribution	120
	7.3 Stored energy in terms of the fields	122
	7.4 Extraction of energy by means of the field forces	124
	7.5 Capacitance – definition	126
	7.6 Capacitance, stored energy, and forces	133
	7.7 Capacitance of a system of many conductors	134
<b>8</b>	<b>The Laplace and Poisson equations of electrostatics</b>	<b>138</b>
	8.1 The general equation for electrostatic potential	138
	8.2 Laplace and Poisson equations for uniform-permittivity regions	142
	8.3 The method of images	144
	8.4 Some simple Poisson-equation situations	150
	8.5 Separation of variables	158
<b>9</b>	<b>Numerical solutions of Laplace and Poisson equations</b>	<b>173</b>
	9.1 General potential equation in Cartesian coordinates	173
	9.2 Methods of solution for the potential	177

<b>10</b>	<b>Electric current</b>	<b>190</b>
10.1	Concept of current density	190
10.2	Various types of current	193
10.3	Power and conservation of current	197
10.4	Boundary conditions and consequences for lossy dielectrics	201
10.5	Relationship between resistance and capacitance	203
<b>11</b>	<b>The magnetostatic field</b>	<b>206</b>
11.1	Magnetostatic forces, fields, and the law of Biôt and Savart	206
11.2	Basics of Maxwell's laws for magnetostatic fields	214
11.3	Ampère's law and applications	218
11.4	The finite solenoid	223
11.5	The boundary conditions for <b>B</b> and <b>H</b>	227
<b>12</b>	<b>The magnetostatic potentials</b>	<b>230</b>
12.1	The scalar magnetic potential	230
12.2	The vector magnetic potential	234
12.3	Potential and field of an elementary magnetic dipole	238
<b>13</b>	<b>Inductance and magnetic stored energy</b>	<b>244</b>
13.1	Mutual and self inductance	244
13.2	Inductance due to internal and external flux linkage	248
13.3	Magnetostatic stored energy	255
13.4	Inductance, stored energy, and forces	258
13.5	Internal inductance and equation (13.11)	262
<b>14</b>	<b>Magnetostatic fields in material media</b>	<b>265</b>
14.1	Force and torque upon a current loop	265
14.2	Magnetization and magnetic permeability	271
14.3	Magnetic materials	276
14.4	Some vacuum–ferromagnet interface consequences	285
14.5	Some details on diamagnetics and paramagnetics	287

<b>15</b>	<b>Extension to electrodynamics</b>	<b>295</b>
	15.1 Faraday's law – introduction	296
	15.2 Maxwell's displacement current	306
	15.3 The Maxwell equations	307
<b>16</b>	<b>How Maxwell's equations lead to waves and signals</b>	<b>312</b>
	16.1 Some forms for the constitutive equations	312
	16.2 The gauge equations for the potentials	313
	16.3 Signals propagating at finite velocities	315
	16.4 Frequency, wavelength, and all that	319
	16.5 Plane waves – introduction	320
	16.6 Use of phasors	321
	16.7 Time-harmonic fields	324
<b>17</b>	<b>Important features of plane time-harmonic waves</b>	<b>331</b>
	17.1 Phase and group velocities	331
	17.2 Plane waves in lossy media	336
	17.3 Polarization	340
	17.4 Power flow; Poynting vector	345
<b>18</b>	<b>Reflection and transmission of plane waves</b>	<b>352</b>
	18.1 Normal incidence upon a perfect conductor	353
	18.2 Oblique incidence upon a perfect conductor	355
	18.3 Normal incidence upon a dielectric half-space	361
	18.4 Oblique incidence upon a dielectric half-space	365
	18.5 Critical and Brewster angles, refractive phenomena	370
	18.6 Optical filters; dielectric stacks	377
<b>19</b>	<b>Waveguides</b>	<b>386</b>
	19.1 The waveguide equations	387
	19.2 Classification of modes for two-dimensional waveguides	390

19.3 TEM modes in two-dimensional planar geometry	395
19.4 TM modes in two-dimensional planar geometry	395
19.5 TE modes in two-dimensional planar geometry	397
19.6 Rectangular waveguides	398
19.7 Cylindrical waveguides	402

---

<b>20</b>	<b>Transmission lines</b>	<b>409</b>
-----------	---------------------------	------------

---

20.1 The TEM mode of a two-dimensional waveguide as transmission line	410
20.2 Extension to lossy infinite transmission lines	416
20.3 Finite-length transmission lines	423
20.4 Measurement of transmission-line parameters	432
20.5 The Smith Chart	437
20.6 Some impedance-matching techniques	445
20.7 General lossless-transmission-line equations and transients	451
20.8 Reasons for considering TE, TM modes	455

---

<b>21</b>	<b>Selected topics in radiation and antennas</b>	<b>459</b>
-----------	--	------------

---

21.1 Time-harmonic radiation by an infinitesimal source	459
21.2 The time-harmonic infinitesimal electric-dipole source	464
21.3 The time-harmonic infinitesimal magnetic-dipole source	465
21.4 A linear current source of nonzero length; antenna parameters	468
21.5 An array of linear current sources	472
21.6 Receiving antennas and radar equation	473
21.7 Geometrical optics and refraction	477
21.8 Diffraction	481

---

<b>Appendices</b>	<b>486</b>
-------------------	------------

---

A.1 Some results from calculus	486
A.1.1 Taylor series	486
A.1.2 Multiple integrals	487
A.1.3 Logarithms	489
A.1.4 Binomial theorem	490
A.2 Some elementary facts about complex numbers	490

A.3 Vectors	493
A.3.1 The principal vector operators	493
A.3.2 Useful vector identities	494
A.3.3 Useful vector-operator identities	494
A.4 Some mathematical and physical constants	495
A.5 Various material constants	496
 <i>Bibliography</i>	 498
<i>Index</i>	501
