

CONTENTS

Chapter 1	Introduction to Computers, Programs, and Java	27
1.1	Introduction	28
1.2	What Is a Computer?	28
1.3	Programming Languages	35
1.4	Operating Systems	38
1.5	Java, the World Wide Web, and Beyond	39
1.6	The Java Language Specification, API, JDK, and IDE	42
1.7	A Simple Java Program	42
1.8	Creating, Compiling, and Executing a Java Program	45
1.9	Displaying Text in a Message Dialog Box	48
1.10	Programming Style and Documentation	50
1.11	Programming Errors	52
Chapter 2	Elementary Programming	59
2.1	Introduction	60
2.2	Writing a Simple Program	60
2.3	Reading Input from the Console	63
2.4	Identifiers	66
2.5	Variables	66
2.6	Assignment Statements and Assignment Expressions	68
2.7	Named Constants	69
2.8	Naming Conventions	70
2.9	Numeric Data Types and Operations	70
2.10	Numeric Literals	74
2.11	Evaluating Expressions and Operator Precedence	76
2.12	Case Study: Displaying the Current Time	77
2.13	Augmented Assignment Operators	79
2.14	Increment and Decrement Operators	80
2.15	Numeric Type Conversions	82
2.16	Software Development Process	84
2.17	Character Data Type and Operations	88
2.18	The String Type	94
2.19	Getting Input from Input Dialogs	96
Chapter 3	Selections	107
3.1	Introduction	108
3.2	boolean Data Type	108
3.3	if Statements	110
3.4	Case Study: Guessing Birthdays	112
3.5	Two-Way if-else Statements	115
3.6	Nested if and Multi-Way if-else Statements	117
3.7	Common Errors in Selection Statements	119
3.8	Generating Random Numbers	122
3.9	Case Study: Computing Body Mass Index	123
3.10	Case Study: Computing Taxes	125
3.11	Logical Operators	127
3.12	Case Study: Determining Leap Year	131
3.13	Case Study: Lottery	132
3.14	switch Statements	134

3.15	Conditional Expressions	137
3.16	Formatting Console Output	138
3.17	Operator Precedence and Associativity	141
3.18	Confirmation Dialogs	143
3.19	Debugging	145
Chapter 4	Loops	159
4.1	Introduction	160
4.2	The while Loop	160
4.3	The do-while Loop	170
4.4	The for Loop	172
4.5	Which Loop to Use?	176
4.6	Nested Loops	178
4.7	Minimizing Numeric Errors	180
4.8	Case Studies	181
4.9	Keywords break and continue	185
4.10	Case Study: Displaying Prime Numbers	188
4.11	Controlling a Loop with a Confirmation Dialog	190
Chapter 5	Methods	203
5.1	Introduction	204
5.2	Defining a Method	204
5.3	Calling a Method	206
5.4	void Method Example	209
5.5	Passing Parameters by Values	212
5.6	Modularizing Code	215
5.7	Case Study: Converting Decimals to Hexadecimals	217
5.8	Overloading Methods	219
5.9	The Scope of Variables	222
5.10	The Math Class	223
5.11	Case Study: Generating Random Characters	227
5.12	Method Abstraction and Stepwise Refinement	229
Chapter 6	Single-Dimensional Arrays	249
6.1	Introduction	250
6.2	Array Basics	250
6.3	Case Study: Lotto Numbers	257
6.4	Case Study: Deck of Cards	260
6.5	Copying Arrays	262
6.6	Passing Arrays to Methods	263
6.7	Returning an Array from a Method	266
6.8	Case Study: Counting the Occurrences of Each Letter	267
6.9	Variable-Length Argument Lists	270
6.10	Searching Arrays	271
6.11	Sorting Arrays	274
6.12	The Arrays Class	278
Chapter 7	Multidimensional Arrays	289
7.1	Introduction	290
7.2	Two-Dimensional Array Basics	290
7.3	Processing Two-Dimensional Arrays	293
7.4	Passing Two-Dimensional Arrays to Methods	295
7.5	Case Study: Grading a Multiple-Choice Test	296
7.6	Case Study: Finding the Closest Pair	298
7.7	Case Study: Sudoku	300
7.8	Multidimensional Arrays	303

Chapter 8	Objects and Classes	321
8.1	Introduction	322
8.2	Defining Classes for Objects	322
8.3	Example: Defining Classes and Creating Objects	324
8.4	Constructing Objects Using Constructors	329
8.5	Accessing Objects via Reference Variables	330
8.6	Using Classes from the Java Library	334
8.7	Static Variables, Constants, and Methods	338
8.8	Visibility Modifiers	343
8.9	Data Field Encapsulation	345
8.10	Passing Objects to Methods	348
8.11	Array of Objects	352
Chapter 9	Strings	361
9.1	Introduction	362
9.2	The String Class	362
9.3	Case Study: Checking Palindromes	373
9.4	Case Study: Converting Hexadecimals to Decimals	374
9.5	The Character Class	376
9.6	The StringBuilder and StringBuffer Classes	379
9.7	Command-Line Arguments	384
Chapter 10	Thinking in Objects	395
10.1	Introduction	396
10.2	Immutable Objects and Classes	396
10.3	The Scope of Variables	397
10.4	The this Reference	399
10.5	Class Abstraction and Encapsulation	401
10.6	Object-Oriented Thinking	405
10.7	Object Composition	408
10.8	Case Study: Designing the Course Class	410
10.9	Case Study: Designing a Class for Stacks	412
10.10	Case Study: Designing the GuessDate Class	414
10.11	Class Design Guidelines	417
10.12	Processing Primitive Data Type Values as Objects	419
10.13	Automatic Conversion between Primitive Types and Wrapper Class Types	422
10.14	The BigInteger and BigDecimal Classes	423
Chapter 11	Inheritance and Polymorphism	433
11.1	Introduction	434
11.2	Superclasses and Subclasses	434
11.3	Using the super Keyword	440
11.4	Overriding Methods	444
11.5	Overriding vs. Overloading	444
11.6	The Object Class and Its toString() Method	446
11.7	Polymorphism	447
11.8	Dynamic Binding	448
11.9	Casting Objects and the instanceof Operator	451
11.10	The Object 's equals method	455
11.11	The ArrayList Class	456
11.12	Case Study: A Custom Stack Class	462
11.13	The protected Data and Methods	463
11.14	Preventing Extending and Overriding	465

Chapter 12	GUI Basics	471
12.1	Introduction	472
12.2	Swing vs. AWT	472
12.3	The Java GUI API	472
12.4	Frames	475
12.5	Layout Managers	477
12.6	Using Panels as Subcontainers	484
12.7	The Color Class	486
12.8	The Font Class	487
12.9	Common Features of Swing GUI Components	488
12.10	Image Icons	491
12.11	JButton	493
12.12	JCheckBox	497
12.13	JRadioButton	498
12.14	Labels	499
12.15	Text Fields	500
Chapter 13	Graphics	505
13.1	Introduction	506
13.2	The Graphics Class	506
13.3	Drawing Strings, Lines, Rectangles, and Ovals	509
13.4	Case Study: The FigurePanel Class	511
13.5	Drawing Arcs	514
13.6	Drawing Polygons and Polylines	516
13.7	Centering a String Using the FontMetrics Class	519
13.8	Case Study: The MessagePanel Class	521
13.9	Case Study: The StillClock Class	526
13.10	Displaying Images	530
13.11	Case Study: The ImageViewer Class	532
Chapter 14	Exception Handling and Text I/O	543
14.1	Introduction	544
14.2	Exception-Handling Overview	544
14.3	Exception Types	549
14.4	More on Exception Handling	552
14.5	The finally Clause	561
14.6	When to Use Exceptions	562
14.7	Rethrowing Exceptions	562
14.8	Chained Exceptions	563
14.9	Defining Custom Exception Classes	564
14.10	The File Class	567
14.11	File Input and Output	570
14.12	File Dialogs	575
14.13	Reading Data from the Web	577
Chapter 15	Abstract Classes and Interfaces	585
15.1	Introduction	586
15.2	Abstract Classes	586
15.3	Case Study: the Abstract Number Class	591
15.4	Case Study: Calendar and GregorianCalendar	593
15.5	Interfaces	596
15.6	The Comparable Interface	599
15.7	The Cloneable Interface	603
15.8	Interfaces vs. Abstract Classes	607
15.9	Case Study: The Rational Class	610

Chapter 16	Event-Driven Programming	625
16.1	Introduction	626
16.2	Events and Event Sources	628
16.3	Listeners, Registrations, and Handling Events	629
16.4	Inner Classes	634
16.5	Anonymous Class Listeners	635
16.6	Alternative Ways of Defining Listener Classes	638
16.7	Case Study: Loan Calculator	641
16.8	Mouse Events	643
16.9	Listener Interface Adapters	646
16.10	Key Events	647
16.11	Animation Using the Timer Class	651
Chapter 17	GUI Components	665
17.1	Introduction	666
17.2	Events for JCheckBox , JRadioButton , and TextField	666
17.3	Text Areas	670
17.4	Combo Boxes	673
17.5	Lists	676
17.6	Scroll Bars	680
17.7	Sliders	683
17.8	Creating Multiple Windows	686
Chapter 18	Applets and Multimedia	697
18.1	Introduction	698
18.2	Developing Applets	698
18.3	The HTML File and the <applet> Tag	699
18.4	Applet Security Restrictions	701
18.5	Enabling Applets to Run as Applications	702
18.6	Applet Life-Cycle Methods	703
18.7	Passing Strings to Applets	705
18.8	Case Study: Bouncing Ball	709
18.9	Case Study: Developing a Tic-Tac-Toe Game	712
18.10	Locating Resources Using the URL Class	717
18.11	Playing Audio in Any Java Program	719
18.12	Case Study: National Flags and Anthems	721
Chapter 19	Binary I/O	735
19.1	Introduction	736
19.2	How Is Text I/O Handled in Java?	736
19.3	Text I/O vs. Binary I/O	737
19.4	Binary I/O Classes	738
19.5	Case Study: Copying Files	748
19.6	Object I/O	750
19.7	Random-Access Files	755
Chapter 20	Recursion	763
20.1	Introduction	764
20.2	Case Study: Computing Factorials	764
20.3	Case Study: Computing Fibonacci Numbers	767
20.4	Problem Solving Using Recursion	770
20.5	Recursive Helper Methods	772
20.6	Case Study: Finding the Directory Size	775
20.7	Case Study: Towers of Hanoi	776
20.8	Case Study: Fractals	780

20.9	Recursion vs. Iteration	783
20.10	Tail Recursion	784
Chapter 21	Generics	795
21.1	Introduction	796
21.2	Motivations and Benefits	796
21.3	Defining Generic Classes and Interfaces	798
21.4	Generic Methods	800
21.5	Case Study: Sorting an Array of Objects	802
21.6	Raw Types and Backward Compatibility	804
21.7	Wildcard Generic Types	805
21.8	Erasure and Restrictions on Generics	808
21.9	Case Study: Generic Matrix Class	810
Chapter 22	Lists, Stacks, Queues, and Priority Queues	819
22.1	Introduction	820
22.2	Collections	820
22.3	Iterators	824
22.4	Lists	825
22.5	The Comparator Interface	829
22.6	Static Methods for Lists and Collections	831
22.7	Case Study: Bouncing Balls	835
22.8	The Vector and Stack Classes	839
22.9	Queues and Priority Queues	840
22.10	Case Study: Evaluating Expressions	843
Chapter 23	Sets and Maps	855
23.1	Introduction	856
23.2	Sets	856
23.3	Comparing the Performance of Sets and Lists	864
23.4	Case Study: Counting Keywords	867
23.5	Maps	868
23.6	Case Study: Occurrences of Words	873
23.7	Singleton and Unmodifiable Collections and Maps	874
Chapter 24	Developing Efficient Algorithms	879
24.1	Introduction	880
24.2	Measuring Algorithm Efficiency Using Big O Notation	880
24.3	Examples: Determining Big O	882
24.4	Analyzing Algorithm Time Complexity	885
24.5	Finding Fibonacci Numbers Using Dynamic Programming	888
24.6	Finding Greatest Common Divisors Using Euclid's Algorithm	890
24.7	Efficient Algorithms for Finding Prime Numbers	895
24.8	Finding the Closest Pair of Points Using Divide-and-Conquer	901
24.9	Solving the Eight Queens Problem Using Backtracking	903
24.10	Computational Geometry: Finding a Convex Hull	906
Chapter 25	Sorting	919
25.1	Introduction	920
25.2	Bubble Sort	920
25.3	Merge Sort	922
25.4	Quick Sort	926
25.5	Heap Sort	930

25.6	Bucket Sort and Radix Sort	937
25.7	External Sort	939
Chapter 26	Implementing Lists, Stacks, Queues, and Priority Queues	953
26.1	Introduction	954
26.2	Common Features for Lists	954
26.3	Array Lists	958
26.4	Linked Lists	964
26.5	Stacks and Queues	978
26.6	Priority Queues	981
Chapter 27	Binary Search Trees	987
27.1	Introduction	988
27.2	Binary Search Trees	988
27.3	Deleting Elements from a BST	1001
27.4	Tree Visualization	1007
27.5	Iterators	1010
27.6	Case Study: Data Compression	1012
Chapter 28	Hashing	1023
28.1	Introduction	1024
28.2	What Is Hashing?	1024
28.3	Hash Functions and Hash Codes	1025
28.4	Handling Collisions Using Open Addressing	1027
28.5	Handling Collisions Using Separate Chaining	1031
28.6	Load Factor and Rehashing	1031
28.7	Implementing a Map Using Hashing	1033
28.8	Implementing Set Using Hashing	1042
Chapter 29	AVL Trees	1053
29.1	Introduction	1054
29.2	Rebalancing Trees	1054
29.3	Designing Classes for AVL Trees	1057
29.4	Overriding the <code>insert</code> Method	1058
29.5	Implementing Rotations	1059
29.6	Implementing the <code>delete</code> Method	1060
29.7	The <code>AVLTree</code> Class	1060
29.8	Testing the <code>AVLTree</code> Class	1066
29.9	AVL Tree Time Complexity Analysis	1069
Chapter 30	Graphs and Applications	1073
30.1	Introduction	1074
30.2	Basic Graph Terminologies	1075
30.3	Representing Graphs	1077
30.4	Modeling Graphs	1082
30.5	Graph Visualization	1092
30.6	Graph Traversals	1095
30.7	Depth-First Search (DFS)	1096
30.8	Case Study: The Connected Circles Problem	1100
30.9	Breadth-First Search (BFS)	1103
30.10	Case Study: The Nine Tails Problem	1106
Chapter 31	Weighted Graphs and Applications	1119
31.1	Introduction	1120
31.2	Representing Weighted Graphs	1121

31.3	The WeightedGraph Class	1123
31.4	Minimum Spanning Trees	1131
31.5	Finding Shortest Paths	1137
31.6	Case Study: The Weighted Nine Tails Problem	1145
Chapter 32	Multithreading and Parallel Programming	1155
32.1	Introduction	1156
32.2	Thread Concepts	1156
32.3	Creating Tasks and Threads	1156
32.4	The Thread Class	1160
32.5	Case Study: Flashing Text	1163
32.6	GUI Event Dispatch Thread	1164
32.7	Case Study: Clock with Audio	1165
32.8	Thread Pools	1168
32.9	Thread Synchronization	1170
32.10	Synchronization Using Locks	1174
32.11	Cooperation among Threads	1176
32.12	Case Study: Producer/Consumer	1181
32.13	Blocking Queues	1184
32.14	Semaphores	1186
32.15	Avoiding Deadlocks	1188
32.16	Thread States	1189
32.17	Synchronized Collections	1189
32.18	Parallel Programming	1191
Chapter 33	Networking	1201
33.1	Introduction	1202
33.2	Client/Server Computing	1202
33.3	The InetAddress Class	1209
33.4	Serving Multiple Clients	1210
33.5	Applet Clients	1213
33.6	Sending and Receiving Objects	1216
33.7	Case Study: Distributed Tic-Tac-Toe Games	1221
Chapter 34	Java Database Programming	1237
34.1	Introduction	1238
34.2	Relational Database Systems	1238
34.3	SQL	1242
34.4	JDBC	1253
34.5	PreparedStatement	1261
34.6	CallableStatement	1264
34.7	Retrieving Metadata	1267

Bonus Chapters 35–50 are available from the companion Website at www.pearsoninternationaleditions.com/liang:

Chapter 35	Internationalization	35-1
Chapter 36	JavaBeans	36-1
Chapter 37	Containers, Layout Managers, and Borders	37-1

Chapter 38 Menus, Toolbars, and Dialogs	38-1
Chapter 39 MVC and Swing Models	39-1
Chapter 40 JTable and JTree	40-1
Chapter 41 Advanced Database Programming	41-1
Chapter 42 Servlets	42-1
Chapter 43 JavaServer Pages	43-1
Chapter 44 JavaServer Faces	44-1
Chapter 45 Web Services	45-1
Chapter 46 Remote Method Invocation	46-1
Chapter 47 2-4 Trees and B-Trees	47-1
Chapter 48 Red-Black Trees	48-1
Chapter 49 Java 2D	49-1
Chapter 50 Testing Using JUnit	50-1

APPENDIXES

Appendix A Java Keywords	1279
Appendix B The ASCII Character Set	1280
Appendix C Operator Precedence Chart	1282
Appendix D Java Modifiers	1284
Appendix E Special Floating-Point Values	1286
Appendix F Number Systems	1287
Appendix G Bitwise Operations	1291

INDEX	1293
