Contents

Preface xiii
Nomenclature xvii

1 Introduction 1
1.1 Continuum Hypothesis 1
1.2 Molecular Viscosity 2
1.3 Flow Classification 4
1.3.1 Velocity Pattern: Laminar, Intermittent, and Turbulent Flows 4
1.3.2 Change of Density, and Incompressible and Compressible Flows 7
1.3.3 Statistically Steady Flow, Unsteady Flow 8
1.4 Shear-Deformation Behavior of Fluids 9
References 10

2 Vector and Tensor Analysis—Applications to Fluid Mechanics ... 11
2.1 Tensors in Three-Dimensional Euclidean Space 11
2.1.1 Index Notation 12
2.2 Vector Operations: Scalar, Vector, and Tensor Products 13
2.2.1 Scalar Product 13
2.2.2 Vector or Cross Product 13
2.2.3 Tensor Product 14
2.3 Contraction of Tensors 15
2.4 Differential Operators in Fluid Mechanics 15
2.4.1 Substantial Derivatives 15
2.4.2 Differential Operator ∇ 16
2.5 Operator ∇ Applied to Different Functions 18
2.5.1 Scalar Product of ∇ and V 18
2.5.2 Vector Product $\nabla \times V$ 20
2.5.3 Tensor Product of ∇ and V 20
2.5.4 Scalar Product of ∇ and a Second-Order Tensor 20
2.5.5 Eigenvalue and Eigenvector of a Second-Order Tensor 24
Problems 25
References 27

3 Kinematics of Fluid Motion 29
3.1 Material and Spatial Description of the Flow Field 29
3.1.1 Material Description 29
3.1.2 Jacobian Transformation Function and Its Material Derivative 30

3.1.3 Velocity, Acceleration of Material Points 34
3.1.4 Spatial Description 34
3.2 Translation, Deformation, Rotation 35
3.3 Reynolds Transport Theorem 38
3.4 Pathline, Streamline, Streakline 40
Problems 42
References 45

4 Differential Balances in Fluid Mechanics 47
4.1 Mass Flow Balance in Stationary Frame of Reference 47
4.1.1 Incompressibility Condition 49
4.2 Differential Momentum Balance in Stationary Frame of Reference 49
4.2.1 Relationship Between Stress Tensor and Deformation Tensor 51
4.2.2 Navier-Stokes Equation of Motion 53
4.2.3 Special Case: Euler Equation of Motion 55
4.3 Some Discussions on Navier-Stokes Equations 57
4.4 Energy Balance in Stationary Frame of Reference 58
4.4.1 Mechanical Energy 58
4.4.2 Thermal Energy Balance 61
4.4.3 Total Energy 63
4.4.4 Entropy Balance 64
4.5 Differential Balances in Rotating Frame of Reference 64
4.5.1 Velocity and Acceleration in Rotating Frame 64
4.5.2 Continuity Equation in Rotating Frame of Reference ... 66
4.5.3 Equation of Motion in Rotating Frame of Reference ... 66
4.5.4 Energy Equation in Rotating Frame of Reference 68
Problems 70
References 73

5 Integral Balances in Fluid Mechanics 75
5.1 Mass Flow Balance 75
5.2 Balance of Linear Momentum 77
5.3 Balance of Moment of Momentum 81
5.4 Balance of Energy 88
5.4.1 Energy Balance Special Case 1: Steady Flow 92
5.4.2 Energy Balance Special Case 2: Steady Flow, Constant Mass Flow 92
5.5 Application of Energy Balance to Engineering Components ... 93
5.5.1 Application: Pipe, Diffuser, Nozzle 93
5.5.2 Application: Combustion Chamber 93
5.5.3 Application: Turbo-shafts, Energy Extraction, Consumption 95
5.6 Irreversibility, Entropy Increase, Total Pressure Loss 98
5.6.1 Application of Second Law to Engineering Components 99

5.7 Theory of Thermal Turbomachinery Stages 101
5.7.1 Energy Transfer in Turbomachinery Stages 102
5.7.2 Energy Transfer in Relative Systems 103
5.7.3 Unified Treatment of Turbine and Compressor Stages 103
5.8 Dimensionless Stage Parameters 106
5.8.1 Simple Radial Equilibrium to Determine r 108
5.8.2 Effect of Degree of Reaction on the Stage Configuration 111
5.8.3 Effect of Stage Load Coefficient on Stage Power 111
5.9 Unified Description of a Turbomachinery Stage 112
5.9.1 Unified Description of Stage with Constant Mean Diameter 113
5.10 Turbine and Compressor Cascade Flow Forces 114
5.10.1 Blade Force in an Inviscid Flow Field 114
5.10.2 Blade Forces in a Viscous Flow Field 117
5.10.3 Effect of Solidity on Blade Profile Losses 122
Problems 123
References 126

6 Inviscid Potential Flows 127
6.1 Incompressible Potential Flows 128
6.2 Complex Potential for Plane Flows 130
6.2.1 Elements of Potential Flow 132
6.3 Superposition of Potential Flow Elements 136
6.3.1 Superposition of a Uniform Flow and a Source 137
6.3.2 Superposition of a Translational Flow and a Dipole 138
6.3.3 Superposition of a Translational Flow, a Dipole, and a Vortex 140
6.3.4 Superposition of a Uniform Flow, Source, and Sink 144
6.3.5 Superposition of a Source and a Vortex 145
6.4 Blasius' Theorem 146
6.5 Kutta-Joukowski Theorem 148
6.6 Conformal Transformation 150
6.6.1 Conformal Transformation, Basic Principles 151
6.6.2 Kutta-Joukowski Transformation 154
6.6.3 Joukowski Transformation 154
6.7 Vortex Theorems 162
6.7.1 Thomson Theorem 163
6.7.2 Generation of Circulation 166
6.7.3 Helmholtz Theorems 168
6.7.4 Vortex-Induced Velocity Field, Law of Bio-Savart 172
6.7.5 Induced Drag Force 176
Problems 178
References 179

7 Viscous Laminar Flow **181**
7.1 Steady Viscous Flow Through a Curved Channel 181
7.1.1 Case I: Conservation Laws 182
7.1.2 Case I: Solution of the Navier-Stokes Equations 185
7.1.3 Case I: Curved Channel, Negative Pressure Gradient 186
7.1.4 Case I: Curved Channel, Positive Pressure Gradient 187
7.1.5 Case II: Radial Flow, Positive Pressure Gradient 187
7.2 Temperature Distribution 189
7.2.1 Case I: Solution of Energy Equation 189
7.2.2 Case I: Curved Channel, Negative Pressure Gradient ... 191
7.2.3 Case I: Curved Channel, Positive Pressure Gradient ... 192
7.2.4 Case II: Radial Flow, Positive Pressure Gradient 192
7.3 Steady Parallel Flows 193
7.3.1 Couette Flow Between Two Parallel Walls 193
7.3.2 Couette Flow Between Two Concentric Cylinders 195
7.3.3 Hagen-Poiseuille Flow 197
7.4 Unsteady Laminar Flows 199
7.4.1 Flow Near Oscillating Flat Plate, Stokes-Rayleigh Problem 199
7.4.2 Influence of Viscosity on Vortex Decay 202
Problems 204
References 208

8 Laminar-Turbulent Transition **209**
8.1 Stability of Laminar Flow 209
8.2 Laminar-Turbulent Transition 210
8.3 Stability of Laminar Flows 213
8.3.1 Stability of Small Disturbances 213
8.3.2 The Orr-Sommerfeld Stability Equation 215
8.3.3 Orr-Sommerfeld Eigenvalue Problem 216
8.3.4 Solution of Orr-Sommerfeld Equation 217
8.3.5 Numerical Results 220
8.4 Physics of an Intermittent Flow, Transition 222
8.4.1 Identification of Intermittent Behavior of Statistically Steady Flows 223
8.4.2 Turbulent/Nonturbulent Decisions 224
8.4.3 Intermittency Modeling for Steady Flow at Zero Pressure Gradient 227
8.4.4 Identification of Intermittent Behavior of Periodic Unsteady Flows 228
8.4.5 Intermittency Modeling for Periodic Unsteady Flow 232
8.5 Implementation of Intermittency into Navier-Stokes Equations 235

8.5.1 Reynolds-Averaged Equations for Fully Turbulent Flow ... 235
8.5.2 Intermittency Implementation in RANS ... 238
Problems ... 240
References ... 241

9 Turbulent Flow, Modeling ... 243
9.1 Fundamentals of Turbulent Flows ... 243
9.1.1 Type of Turbulence ... 245
9.1.2 Correlations, Length, and Time Scales ... 245
9.1.3 Spectral Representation of Turbulent Flows ... 252
9.1.4 Spectral Tensor, Energy Spectral Function ... 254
9.2 Averaging Fundamental Equations of Turbulent Flow ... 256
9.2.1 Averaging Conservation Equations ... 257
9.2.2 Equation of Turbulence Kinetic Energy ... 265
9.2.3 Equation of Dissipation of Kinetic Energy ... 270
9.3 Turbulence Modeling ... 271
9.3.1 Algebraic Model: Prandtl Mixing Length Hypothesis ... 271
9.3.2 Algebraic Model: Cebeci-Smith Model ... 277
9.3.3 Baldwin-Lomax Algebraic Model ... 277
9.3.4 One-Equation Model by Prandtl ... 278
9.3.5 Two-Equation Models ... 279
9.4 Grid Turbulence ... 284
9.5 Numerical Simulation Examples ... 285
9.5.1 Examples of Steady Flow Simulations with Two-Equation Models ... 286
9.5.2 Case Study: Flow Simulation in a Rotating Turbine ... 288
9.5.3 Results, Discussion ... 293
9.5.4 RANS Shortcomings, Closing Remarks ... 301
Problems ... 301
Project ... 302
References ... 303

10 Free Turbulent Flow ... 307
10.1 Types of Free Turbulent Flows ... 307
10.2 Fundamental Equations of Free Turbulent Flows ... 308
10.3 Free Turbulent Flows at Zero Pressure Gradient ... 309
10.3.1 Plane Free Jet Flows ... 312
10.3.2 Straight Wake at Zero Pressure Gradient ... 312
10.3.3 Free Jet Boundary ... 316
10.4 Wake Flow at Nonzero Lateral Pressure Gradient ... 318
10.4.1 Wake Flow in Engineering Applications, General Remarks ... 319
10.4.2 Theoretical Concept, an Inductive Approach ... 322
10.4.3 Nondimensional Parameters ... 325

10.4.4 Near Wake, Far Wake Regions 327
10.4.5 Utilizing the Wake Characteristics 328
Projects 332
References 333

11 Boundary Layer Theory 335
11.1 Boundary Layer Approximations 336
11.2 Exact Solutions of Laminar Boundary Layer Equations 338
11.2.1 Laminar Boundary Layer, Flat Plate 339
11.2.2 Wedge Flows 341
11.2.3 Polhausen Approximate Solution 344
11.3 Boundary Layer Theory Integral Method 345
11.3.1 Boundary Layer Thicknesses 346
11.3.2 Boundary Layer Integral Equation 348
11.4 Turbulent Boundary Layers 351
11.4.1 Universal Wall Functions 354
11.4.2 Velocity Defect Function 356
11.5 Boundary Layer, Differential Treatment 361
11.5.1 Solution of Boundary Layer Equations 365
11.6 Measurement of Boundary Flow, Basic Techniques 365
11.6.1 Experimental Techniques 365
11.7 Examples: Calculations, Experiments 368
11.7.1 Steady State Velocity Calculations 368
11.7.2 Periodic Unsteady Inlet Flow Condition 372
11.7.3 Application of κ-ω Model to Boundary Layer 378
11.8 Parameters Affecting Boundary Layer 378
11.8.1 Parameter Variations, General Remarks 379
11.8.2 Effect of Periodic Unsteady Flow 383
11.9 Numerical Simulation 395
Project 396
References 396

12 Compressible Flow 401
12.1 Steady Compressible Flow 401
12.1.1 Speed of Sound, Mach Number 401
12.1.2 Fluid Density, Mach Number, Critical State 403
12.1.3 Effect of Cross-Section Change on Mach Number 407
12.1.4 Supersonic Flow 425
12.2 Unsteady Compressible Flow 433
12.2.1 One-Dimensional Approximation 434
12.3 Numerical Treatment 440
12.3.1 Unsteady Compressible Flow: Example—Shock Tube 441
12.3.2 Shock Tube Dynamic Behavior 442
Problems 445
Project 447
References 447

13 Flow Measurement Techniques, Calibration 449
13.1 Measurement of Time-Dependent Flow Field Using HWA ... 449
13.1.1 Probe Type, Wire, Film Arrangements 450
13.1.2 Energy Balance of HW Probes 451
13.1.3 Heat Transfer of HW Probes 454
13.1.4 Calibration Facility 457
13.1.5 Calibration of Single Hot Wire Probes 458
13.1.6 Calibration of X-Hot Wire Probes 458
13.2 Measurement of Time-Averaged Flow Quantities Using Five-Hole Probes 466
13.2.1 Flow Field Measurement Using Five-Hole Probes 467
13.2.2 Calibration Procedure of Five-Hole Probes 468
References 470

A Tensor Operations in Orthogonal Curvilinear Coordinate Systems 473

B Physical Properties of Dry Air 485

Index 495
