

Contents

Preface	xi
Acknowledgements	xiii
Chapter 1 The earth's atmosphere	1
Atmospheric composition	1
Gases	2
Atmospheric pressure	2
Pressure measurement	2
Temperature	4
Density	4
International Standard Atmosphere	4
Properties of air with altitude	4
Multiple-choice questions	4
Chapter 2 Air-data instruments	8
Instrumentation	8
Altimeters	10
Vertical speed indicators	13
Air-speed indicators	15
Machmeters	18
Pitot static systems	21
Altitude and airspeed warnings/alerts	25
Air-data computers	27
Reduced vertical separation minimums	28
Advanced sensors	29
Multiple-choice questions	29
Chapter 3 Gyroscopic instruments	31
Gyroscope principles	31
Practical gyroscopes	35
Artificial horizons	36
Gyroscope tumbling	36
Directional gyroscopes	38

VIII CONTENTS

Rate gyroscopes	38
Turn-and-slip indicators	40
Turn coordinators	43
Strapdown technology	44
Multiple-choice questions	46
Chapter 4 Flight instruments	48
Instrument panel layout	48
Compass instruments	50
Navigation indicators	50
Attitude and heading reference systems	61
Electronic flight displays	62
Electronic flight bags	70
Multiple-choice questions	71
Chapter 5 Navigation	73
Terrestrial navigation	73
Dead reckoning	76
Position fixing	78
Maps and charts	78
Navigation terminology	79
Navigation systems development	79
Navigation systems summary	86
Multiple-choice questions	86
Chapter 6 Control systems	88
Elementary control	88
Control systems	90
Servo control systems	92
Multiple-choice questions	97
Chapter 7 Aeroplane aerodynamics	98
Static and dynamic pressure	98
Subsonic airflow	99
Aerofoils	101
Drag	106
Forces acting on an aeroplane	110
Flight stability and dynamics	113
Control and controllability	122
Lift augmentation devices	125
Balance, mass balance and control-surface tabs	127
Multiple-choice questions	129
Chapter 8 Aeroplane automatic flight control	131
Principles	131
Pitch control	133
Roll control	137
Yaw dampers	144
Control laws	146
Interlocks	147

Case study – general aviation autopilot	147
Multiple-choice questions	152
Chapter 9 Rotorcraft aerodynamics	154
Rotorcraft features	155
Primary flying controls	158
Aerodynamics	163
Multiple-choice questions	173
Chapter 10 Rotorcraft automatic flight control	175
Stability	175
Attitude-hold system	175
Autopilots	177
Servo control	177
Control axes	178
Design considerations	178
Multiple-channel systems	179
Control laws	179
Maintenance considerations	180
Case study – general aviation autopilot	180
Multiple-choice questions	184
Chapter 11 Autoland	186
History	186
Overview	188
Operation	192
Terminology	194
Architecture	195
Operational aspects	195
GNNS approaches	195
Multiple-choice questions	197
Chapter 12 Electronic display technologies	199
Situational awareness	199
Synthetic vision technology	200
Enhanced vision systems	201
Head-up-display	202
Combined vision systems	206
Night-vision imaging systems	207
Multiple-choice questions	219
Chapter 13 Fly-by-wire	221
History	221
Principles	222
System overview	224
Case studies	225
Rotorcraft	231
FADEC	232
Multiple-choice questions	233

X CONTENTS

Appendices	235
A. Glossary	235
B. Revision questions	238
C. Answers to questions	248
Index	252
