1	Inti	oduction to the shelf seas	
	1.1	Definition and relation to the global ocean	1
	1.2	Economic value versus environmental health	4
	1.3	The scientific challenge of the shelf seas	5
	1.4	A brief history of scientific research of the shelf seas to 1960	6
	1.5	Instrumentation: 'Tools of the trade'	9
		1.5.1 The measurement of temperature, salinity and pressure (the CTD)	10
		1.5.2 Sensors for biogeochemistry and beyond	12
		1.5.3 The measurement of the currents: the ADCP	15
		1.5.4 Drifters, gliders and AUVs	17
		1.5.5 Research vessels	19
	1.6	1.5.6 Remote sensing of ocean properties	20
	1.6	The following and appropriate of intentioning	21
	1.7	,,,,,,,	22

2		sical forcing of the shelf seas: what drives the	
		tion of ocean?	
	2.1	Energy sources	25
	2.2	The seasonal cycle of heating and cooling	26
		2.2.1 Solar heating, Q_s	26
		2.2.2 Back radiation from the sea surface, Q_b	29
		2.2.3 Heat exchange by evaporation and conduction, Q_e and Q_c	30 31
		2.2.4 Seasonal progression of heat fluxes and the heat budget2.2.5 Variation of heat fluxes with latitude	34
		2.2.6 Thermal expansion and buoyancy changes	35
	2.3	Freshwater exchange	36
	2.5	2.3.1 Freshwater buoyancy inputs	36
		2.3.2 Seasonal cycles of freshwater input	37
		2.3.3 Global distribution of freshwater input	37
		2.3.4 Surface fluxes of freshwater	38
	2.4		39
	2.5	Tidal forcing	40

viii	Contents

		2.5.1 Tidal constituents	44
		2.5.2 Tidal energy supply to the shelf seas	46
		2.5.3 Source of energy dissipated by the tides	48
	Chap	oter summary	48
	Furtl	ner reading	49
3	Pos	ponse to forcing: the governing equations and	
,		ne basic solutions	
	3.1	Kinematics: the rules of continuity	50
	3.2	Dynamics: applying Newton's Laws	52
		3.2.1 Coriolis Force ($F = ma$ on a rotating Earth)	54
		3.2.2 The acceleration term: Eulerian versus Lagrangian velocities	56
		3.2.3 Internal forces: how do we include pressure and frictional forces?	57
		3.2.4 The equations of motion (and hydrostatics)	59
	3.3	Geostrophic flow	60
		3.3.1 The dynamical balance	61
		3.3.2 The gradient equation 3.3.3 Thermal wind	62 65
	3.4	Fundamental oscillatory motions: what a water particle does	03
	٥.,	if you give it a push	66
		3.4.1 Inertial oscillations	66
		3.4.2 Water column stability and vertical oscillations	67
	3.5	Turbulent stresses and Ekman dynamics	68
		3.5.1 Current structure and transport in the Ekman layer	68
		3.5.2 The bottom Ekman layer	70
		3.5.3 Response to the Ekman transport at a coastal boundary	72
	3.6	Long waves and tidal motions	75
		3.6.1 Long waves without rotation	75
		3.6.2 Long waves with rotation (Kelvin waves)	77
		3.6.3 Amplification and reflection of the tide	79
		3.6.4 Amphidromic systems	80
	2.7	3.6.5 Tidal resonance	84
	3.7	Tidally averaged residual circulation	86
		oter summary	87
		her reading	88
	Cha	oter problems	89
4	Wa	ves, turbulent motions and mixing	
	4.1	Surface waves	90
		4.1.1 The first order velocity potential	90
		4.1.2 Orbital motions	93
		4.1.3 Waves of finite amplitude	93
		4.1.4 Energy propagation	95
		4.1.5 Wave breaking and near-surface processes	96
	4.2	Internal waves	99
		4.2.1 Velocity potential for waves on the interface between two layers 4.2.2 Particle motions in internal waves	99 100
		4.2.2 Particle motions in internal waves 4.2.3 Energy and the group velocity of internal waves	100
		nais anergy and the group refocity of internal waves	100

ix Contents

		4.2.4 Continuous stratification and rotation	103
		4.2.5 The importance of internal waves	104
	4.3	Turbulence and mixing	105
		4.3.1 The nature of turbulence and its relation to mixing	105
		4.3.2 Turbulent fluxes of scalars	107
		4.3.3 The advection diffusion equation	108
		4.3.4 Diffusion of momentum	109 110
		4.3.5 Fickian diffusion 4.3.6 When is diffusion in the ocean Fickian?	113
	4.4		115
	4.4	The energetics of turbulence 4.4.1 Buoyancy versus shear production of turbulence: the Richardson number	115
		4.4.2 The turbulent kinetic energy equation and dissipation	120
		4.4.3 Scales of turbulence: the Kolmogorov microscales	121
		4.4.4 Turbulence closure	125
