

CONTENTS

List of Tables	ix
List of Figures	xi
Preface	xvii
Part I. Principles	1
Chapter 1	Historical Background - XIXth Century and Beyond
	3
1.1.	The Early XIX th Century
	4
1.2.	Waves and the Eletromagnetic Theory
	7
1.3.	Matter and Atomism in the XIX th Century
	9
1.4.	Physics in the XX th Century
	13
1.5.	The “Impossible” Reduction
	14
1.6.	The Structure of the 1927 Interpretation: Reduction Revisited
	29
Chapter 2	The Characteristic Function Derivation
	33
2.1.	The Axioms and the Formalism
	34
2.2.	Quantization in Spherical Coordinates: An Example
	39
2.3.	Quantization in Generalized Coordinates
	43
2.4.	Generalization to Mathieu Canonical Transformations
	45
2.5.	Connection to Bohr-Sommerfeld Rules
	47
2.6.	Connections with Feynman’s Path Integral Approach
	61
Chapter 3	The Entropy Derivation
	65
3.1.	The Derivation
	66
3.2.	Connections with the Characteristic Function Derivation
	69
3.3.	Three-Dimensional Derivation
	72
3.4.	The Phase-Space Probability Density Function
	75
3.5.	Average Values Calculated Upon Phase Space
	81
3.6.	Entropy Maximization by $F(q,p;t)$
	90
Chapter 4	The Stochastic Derivation
	93
4.1.	The Stochastic Approach
	94
4.2.	Connections with Previous Derivations
	101
4.3.	Ensemble and Time Averages: The Ergodic Assumption
	103
4.4.	Consequences of the Stochastic Derivation
	107
4.5.	The Origin of Stochastic Behavior
	117

Chapter 5	Quantum Mechanics and the Central Limit Theorem	125
	The Central Limit Theorem for One Random Variable	126
	5.2. Phase Space Derivation	128
	5.3. Connection with Previous Derivations	133
	5.4. The CLT Derivation of the Schrödinger Equation	138
	5.5. Implications of the Theorem	139
	5.6. Ensemble and Single Systems Revisited	141
	5.7. Ontological Duality As a False Problem	142
	5.8. The Dispersion Relations	145
	5.9. Limitations of the Proof	148
Chapter 6	Langevin Equations for Quantum Mechanics	151
	6.1. Previous Results	152
	6.2. Langevin Stochastic Analysis	154
	6.3. The Harmonic Oscillator	159
	6.4. The Morse Oscillator	176
	6.5. The 3D-Harmonic Oscillator	179
	6.6. The Hydrogen Atom	181
	6.7. The “Classical” Limit	182
	6.8. Extrinsic and Intrinsic Interpretations	189
	6.9. Further Developments	191
Part II. New Perspectives		193
Chapter 7	Classical Representation of the Spin	195
	7.1. The Classical Bidimensional Oscillator	196
	7.2. The Spin Eigenfunctions	202
	7.3. Derivation of the Pauli Equation:	207
	7.4. The Stern-Gerlach Experiment	212
Chapter 8	Operator Formation and Phase Space Distributions	223
	8.1. The notion of a Probability Distribution in Quantum Mechanics	226
	8.2. Operator formation in Quantum Mechanics	233
	8.3. The dynamical equations	236
	8.4. On Distributions Assuming Negative Values	238
	8.5. Why FO(q,p,t)?	242
Chapter 9	On Reality, Locality and Bell’s Inequalities	253
	9.1. Von Neumann’s Theorem and Bell’s Argument	254
	9.2. On Bohmian Mechanics and Hidden Variable Theories	259
	9.3. Non-Locality: What It Means?	262
	9.4. Bohmian Equations: Wholeness	265
	9.5. On Determinism	268
Chapter 10	Indistinguishability	269
	10.1. Some Trivial Results on Counting	270
	10.2. Gibb’s Paradox and the Distinction between Classical and Quantum Worlds	273

10.3. A Derivation of the Correct Boltzmann Weight	274
10.4. How Come?	276
Part III. Relativistic Extension	279
Chapter 11 Special and General Relativistic Quantum Mechanics	281
11.1. Special Relativistic Equations	282
11.2. General Relativistic Quantum Mechanics	291
11.3. Application: The General Relativistic "Free" Particle Problem	294
11.4. The Negative Mass Conjecture	299
11.5. Consequences of the Relativistic Approach	308
Part IV. Interpretation	313
Chapter 12 The Interpretation of Quantum Mechanics	315
12.1. The Copenhagen Interpretation: Reduction of the Wave Packet	315
12.2. David Bohm's Interpretation: Wholeness	321
12.3. The Statistical Interpretation: Ensembles	326
12.4. The Stochastic Interpretation: Randomness	329
12.5. The Relative State Interpretation: Many Worlds	331
12.6. Consistent Histories Interpretation: Events	336
12.7. The Present Interpretation	340
12.8. Closing Remarks on Physics, Weirdness and Garbage Collectors	346
References	349
