List of Figures xiv

List of Tables xvii

Preface xx

1 Defining Simulation: What, Why and When? 1
- 1.1 Introduction 1
- 1.2 What is Simulation? 2
  - 1.2.1 Defining Simulation 2
  - 1.2.2 Simulation Methods 5
- 1.3 Why Simulate? 9
  - 1.3.1 The Nature of Operations Systems: Variability, Interconnectedness and Complexity 9
  - 1.3.2 The Advantages of Simulation 13
  - 1.3.3 The Disadvantages of Simulation 16
- 1.4 When to Simulate 16
- 1.5 Conclusion 17

Exercises 17

Notes 18

References 18

2 Inside Simulation Software 21
- 2.1 Introduction 21
- 2.2 Modelling the Progress of Time 22
  - 2.2.1 The Time-Slicing Approach 22
  - 2.2.2 The Discrete-Event Simulation Approach (Three-Phase Method) 24
  - 2.2.3 The Discrete-Event Simulation Approach (Other Methods) 34
  - 2.2.4 The Continuous Simulation Approach 35
  - 2.2.5 Summary: Modelling the Progress of Time 36
- 2.3 Modelling Variability 36
  - 2.3.1 Modelling Unpredictable Variability 36
  - 2.3.2 Random Numbers 37
  - 2.3.3 Relating Random Numbers to Variability in a Simulation 38
  - 2.3.4 Modelling Variability in Times and Other Continuous Variables 39

2.3.5 Sampling from Standard Statistical Distributions 41
2.3.6 Computer Generated Random Numbers 42
2.3.7 Modelling Predictable Variability 44
2.3.8 Summary on Modelling Variability 44
2.4 Summary 44
Exercises 45
References 47

3 Software for Simulation 48
3.1 Introduction 48
3.2 Visual Interactive Simulation (VIS) 49
3.3 Simulation Software 52
3.3.1 Spreadsheets 52
3.3.2 Programming Languages 52
3.3.3 Specialist Simulation Software 53
3.3.4 Comparing Spreadsheets, Programming Languages and Specialist Simulation Software 54
3.4 Selection of Simulation Software 55
3.4.1 The Process of Software Selection 56
3.4.2 Step 1: Establish the Modelling Requirements 57
3.4.3 Step 2: Survey and Short-List the Software 57
3.4.4 Step 3: Establish Evaluation Criteria 57
3.4.5 Step 4: Evaluate the Software in Relation to the Criteria 59
3.4.6 Step 5: Software Selection 60
3.5 Summary 61
References 61

4 Simulation Studies: An Overview 64
4.1 Introduction 64
4.2 Simulation Studies: An Overview of Key Modelling Activities 64
4.2.1 Conceptual Modelling 65
4.2.2 Model Coding 66
4.2.3 Experimentation 66
4.2.4 Implementation 67
4.3 Simulation Modelling is Not Linear 68
4.4 Something is Missing! 69
4.5 Simulation Project Time-scales 69
4.6 The Simulation Project Team 71
4.7 Hardware and Software Requirements 72
4.8 Project Costs 73
4.9 Project Selection 74
4.10 Summary 75
References 75

5 Conceptual Modelling 77
5.1 Introduction 77
5.2 Conceptual Modelling Example: Simulating an Outpatients Clinic 78
5.3 What is Conceptual Modelling? 81
5.3.1 Definition of a Conceptual Model 81
5.3.2 Artefacts of Conceptual Modelling 82
5.4 Requirements of a Conceptual Model: Choosing what to Model 84
5.5 Levels of Abstraction 86
5.6 Communicating the Conceptual Model 87
5.6.1 Simulation Project Specification 87
5.6.2 Representing the Conceptual Model 89
5.7 Summary 92
Exercise 93
Notes 93
References 93
Note 95

6 Developing the Conceptual Model 96
6.1 Introduction 96
6.2 A Framework for Conceptual Modelling 97
6.2.1 Developing an Understanding of the Problem Situation 98
6.2.2 Determining the Modelling and General Project Objectives 100
6.2.3 Designing the Conceptual Model: Identifying the Model Outputs and Inputs 102
6.2.4 Designing the Conceptual Model: Determining the Model Content 105
6.2.5 The Role of Data in Conceptual Modelling 108
6.2.6 Summary of the Conceptual Modelling Framework 109
6.3 Methods of Model Simplification 109
6.3.1 Aggregation of Model Components 110
6.3.2 Excluding Components and Details 111
6.3.3 Replacing Components with Random Variables 112
6.3.4 Excluding Infrequent Events 112
6.3.5 Reducing the Rule Set 113
6.3.6 Splitting Models 113
6.3.7 What is a Good Simplification? 114
6.4 Summary 115
Exercises 115
References 117

7 Data Collection and Analysis **119**
7.1 Introduction 119
7.2 Data Requirements 120
7.3 Obtaining Data 121
7.3.1 Dealing with Unobtainable (Category C) Data 122
7.3.2 Data Accuracy 124
7.3.3 Data Format 124
7.4 Representing Unpredictable Variability 125
7.4.1 Traces 125
7.4.2 Empirical Distributions 126
7.4.3 Statistical Distributions 127
7.4.4 Traces versus Empirical Distributions versus Statistical Distributions 134
7.4.5 Bootstrapping 137
7.4.6 Further Issues in Representing Unpredictable Variability: Correlation and Non-Stationary Data 138
7.5 Selecting Statistical Distributions 139
7.5.1 Selecting Distributions from Known Properties of the Process 139
7.5.2 Fitting Statistical Distributions to Empirical Data 140
7.6 Summary 149
Exercises 149
Note 152
References 152

8 Model Coding **154**
8.1 Introduction 154
8.2 Designing the Model 155
8.3 Coding the Model 156
8.3.1 Separate the Data from the Code from the Results 157
8.3.2 Use of Pseudo Random Number Streams 158
8.4 Documenting the Model and the Simulation Project 161
8.5 Summary 163
Exercises 163
References 164

9 Experimentation: Obtaining Accurate Results **166**
9.1 Introduction 166
9.2 Simulation Output Analysis: The Problem 167
9.3 The Nature of Simulation Models and Simulation Output 168
9.3.1 Terminating and Non-Terminating Simulations 168
9.3.2 Transient Output 168
9.3.3 Steady-State Output 169
9.3.4 Other Types of Output 171
9.3.5 Determining the Nature of the Simulation Output 172

9.4 Issues in Obtaining Accurate Simulation Results 172
9.4.1 Initialisation Bias: Warm-up and Initial Conditions 173
9.4.2 Obtaining Sufficient Output Data: Long Runs and Multiple Replications 173
9.5 An Example Model: Computer User Help Desk 174
9.6 Dealing with Initialisation Bias: Warm-up and Initial Conditions 175
9.6.1 Determining the Warm-up Period 175
9.6.2 Setting Initial Conditions 180
9.6.3 Mixed Initial Conditions and Warm-up 181
9.6.4 Initial Conditions versus Warm-up 181
9.7 Selecting the Number of Replication and Run-Length 182
9.7.1 Performing Multiple Replications 182
9.7.2 Variance Reduction (Antithetic Variates) 188
9.7.3 Performing a Single Long Run 190
9.7.4 Multiple Replications versus Long Runs 193
9.8 Summary 194
Exercises 195
Notes 198
References 198

10 Experimentation: Searching the Solution Space 200
10.1 Introduction 200
10.2 The Nature of Simulation Experimentation 202
10.2.1 Interactive and Batch Experimentation 202
10.2.2 Comparing Alternatives and Search Experimentation 203
10.3 Reporting Results from a Single Scenario 204
10.3.1 Point Estimates 204
10.3.2 Measures of Variability 209
10.4 Comparing Alternatives 213
10.4.1 Comparison of Two Scenarios 213
10.4.2 Comparison of Many Scenarios 217
10.4.3 Choosing the Best Scenario(s) 219
10.5 Search Experimentation 220
10.5.1 Informal Approaches to Search Experimentation 221
10.5.2 Experimental Design 224
10.5.3 Metamodelling 228
10.5.4 Optimisation ('Searchisation') 230
10.6 Sensitivity Analysis 232
10.7 Summary 233
Exercises 234
Notes 237
References 237

11 Implementation **241**
11.1 Introduction 241
11.2 What is Implementation? 241
11.2.1 Implementing the Findings 242
11.2.2 Implementing the Model 243
11.2.3 Implementation as Learning 243
11.3 Implementation and Simulation Project Success 244
11.3.1 What is Simulation Project Success? 244
11.3.2 How is Success Achieved? 245
11.3.3 How is Success Measured? 247
11.4 Summary 248
References 248

12 Verification, Validation and Confidence **251**
12.1 Introduction 251
12.2 What are Verification and Validation? 252
12.3 The Difficulties of Verification and Validation 255
12.3.1 There is No Such Thing as General Validity 255
12.3.2 There may be No Real World to Compare Against 256
12.3.3 Often the Real World Data are Inaccurate 256
12.3.4 Which Real World? 256
12.3.5 There is Not Enough Time to Verify and Validate Everything 257
12.3.6 It is Impossible to Prove that a Model is Valid: Confidence not Validity 257
12.4 Methods of Verification and Validation 257
12.4.1 Conceptual Model Validation 258
12.4.2 Data Validation 258
12.4.3 Verification and White-Box Validation 259
12.4.4 Black-Box Validation 260
12.4.5 Experimentation Validation 264
12.4.6 Solution Validation 264
12.5 Independent Verification and Validation 265
12.6 Summary 266
Exercises 267
Notes 268
References 268

13 The Practice of Simulation **271**
13.1 Introduction 271
13.2 Types of Simulation Model 271
13.2.1 Throwaway Models 272
13.2.2 Ongoing Use Models 272
13.2.3 Regular Use Models 273
13.2.4 Generic Models 273

13.2.5 Reusable Models/Components 274
13.3 Modes of Simulation Practice 274
13.3.1 Three Modes of Practice 275
13.3.2 Facets of the Modes of Simulation Practice 276
13.3.3 Modes of Practice in Business and the Military 278
13.3.4 Extending the Three Modes Framework 280
13.4 Summary 280
Note 281
