Preface *xiii*
Author *xvii*

1 Introduction 1

1.1 Background 1
1.2 About This Monograph 3

2 Formulation of classical meshless methods 5

2.1 Introduction 5
2.2 Fundamentals of Meshless Methods 6
2.3 Common Steps of Meshless Method 7
2.3.1 Geometry creation 8
2.3.2 Approximation of field variable 8
2.3.3 Discretisation of governing differential equation 9
2.3.4 Assembly of system of equations 9
2.3.5 Solving assembled system of equations 10
2.4 Classical Meshless Methods 10
2.4.1 Smooth particle hydrodynamics 11
2.4.2 Diffuse element method 13
2.4.3 Element-free Galerkin method 16
2.4.4 Natural element method 18
2.4.5 Reproducing kernel particle method 20
2.4.6 Partition of unity finite element method 25
2.4.7 Finite point method 27
2.4.8 Meshless local Petrov–Galerkin method 30
2.4.9 Local boundary integral equation method 35
2.4.10 Point interpolation method 38
2.4.11 Gradient smoothing method 40

2.4.12 *Radial point interpolation-based finite difference method* 42
2.4.13 *Generalized meshfree (GMF) approximation* 47
2.4.14 *Maximum entropy (ME) approximation method* 49
2.5 *Summary* 52

3 Recent developments of meshless methods 53

3.1 *Introduction* 53
3.2 *Hermite-Cloud Method* 53
3.2.1 *Formulation of Hermite-cloud method* 54
3.2.2 *Numerical implementation* 60
3.2.3 *Examples for validation* 62
3.2.4 *Remarks* 72
3.3 *Point Weighted Least-Squares Method* 73
3.3.1 *Formulation of PWLS method* 73
3.3.2 *Numerical implementation of PWLS method* 80
3.3.3 *Examples for validation* 83
3.3.4 *Remarks* 92
3.4 *Local Kriging (LoKriging) Method* 93
3.4.1 *Formulation of Kriging interpolation* 94
3.4.2 *Numerical implementation of LoKriging method* 99
3.4.3 *Examples for validation* 103
3.4.4 *Remarks* 114
3.5 *Variation of Local Point Interpolation Method (vLPIM)* 115
3.5.1 *Meshless point interpolation* 115
3.5.2 *Numerical implementation of vLPIM* 117
3.5.3 *Examples for validation* 122
3.5.4 *Remarks* 125
3.6 *Random Differential Quadrature (RDQ) Method* 125
3.6.1 *Formulation of fixed reproducing kernel particle method* 128
3.6.2 *Formulation of differential quadrature method* 132
3.6.3 *Development of RDQ method* 134
3.6.4 *Remarks* 143
3.7 *Summary* 143

4 Convergence and consistency analyses 145

4.1 *Introduction to Convergence Analysis* 145
4.2 *Development of Superconvergence Condition* 146

4.3 Convergence Analysis 148
4.3.1 Computation of convergence rate for distribution of random field nodes 150
4.3.2 Remarks about effects of random nodes on convergence rate 150
4.3.3 One-dimensional test problems 152
4.3.4 Two-dimensional test problems 156
4.3.5 Elasticity problems 162
4.4 Application of RDQ Method for Solving Fixed–Fixed and Cantilever Microswitches under Nonlinear Electrostatic Loading 173
4.5 Introduction to Consistency Analysis of RDQ Method 180
4.6 Consistency Analysis of Locally Applied DQ Method 181
4.6.1 Consistency analysis of one-dimensional wave equation by uniform distribution of virtual nodes 182
4.6.2 Consistency analysis of one-dimensional wave equation by cosine distribution of virtual nodes 189
4.6.3 Consistency analysis of one-dimensional Laplace equation by uniform distribution of virtual nodes 192
4.7 Effect of Uniform and Cosine Distributions of Virtual Nodes on Convergence of RDQ Method 195
4.7.1 One-dimensional test problems 195
4.7.2 Two-dimensional test problems 203
4.7.3 Elasticity problems 207
4.8 Summary 209

5 Stability analyses 213

5.1 Introduction 213
5.2 Stability Analysis of First-Order Wave Equation by RDQ Method 217
5.2.1 Stability analysis of first-order wave equation by different schemes for discretisation of domains 217
5.2.2 Consistency analysis of stable schemes and verification by numerically implementing first-order wave equation by locally applied DQ method 226
5.2.3 Implementation of RDQ method for first-order wave equation by forward time and central space scheme 230

5.2.4 *Remarks on solution of first-order wave equation by RDQ method* 232
5.3 *Stability Analysis of Transient Heat Conduction Equation* 235
5.3.1 *Forward time and forward space scheme* 235
5.3.2 *Forward time and central space scheme* 236
5.4 *Stability Analysis of Transverse Beam Deflection Equation* 242
5.4.1 *Explicit approach to solve the transverse beam deflection equation by the RDQ method* 242
5.4.2 *Implicit approach to solving transverse beam deflection equation by RDQ method* 248
5.5 *Summary* 252

6 Adaptive analysis 255

6.1 *Introduction* 255
6.2 *Error Recovery Technique in ARDQ Method* 259
6.3 *Adaptive RDQ Method* 261
6.3.1 *Computation of error in ARDQ method* 262
6.3.2 *Adaptive refinement in ARDQ method* 263
6.4 *Convergence Analysis in ARDQ Method* 267
6.4.1 *One-dimensional test problems* 268
6.4.2 *Two-dimensional test problems* 276
6.4.3 *Semi-infinite plate with central hole* 285
6.5 *Summary* 293

7 Engineering applications 295

7.1 *Introduction* 295
7.2 *Application of Meshless Methods to Microelectromechanical System Problems* 295
7.2.1 *Fixed–fixed microswitches* 297
7.2.2 *Cantilever microswitches* 300
7.2.3 *Microoptoelectromechanical systems devices* 304
7.2.4 *Microtweezers* 306
7.3 *Application of Meshless Method in Submarine Engineering* 309
7.3.1 *Numerical implementation of Hermite-cloud method* 309
7.3.2 *Numerical study of near-bed submarine pipeline under current* 311

7.4 Application of- RDQ Method for two-dimensional Simulation of pH-Sensitive Hydrogel 316
7.4.1 Model development of two-dimensional pH-sensitive hydrogel 320
7.4.2 Two-dimensional simulation of pH-sensitive hydrogels by RDQ method 337
7.4.3 Effects of solution pH and initial fixed-charge concentration on swelling of two-dimensional hydrogel 344
7.4.4 Effects of Young's modulus and geometrical shape of hydrogel at dry state on swelling 349
7.5 Summary 363
Appendix A: Derivation of characteristic polynomial $\phi(z)$ 367
Appendix B: Definition of reduced polynomial $\phi_l(z)$ 369
Appendix C: Derivation of discretisation equation by Taylor series 371
Appendix D: Derivation of ratio of successive amplitude reduction values for fixed–fixed beam using explicit and implicit approaches 373
Appendix E: Source code development 377
References 395
