| List of Algorithms | xliii |
| Acknowledgments..... | xlv |

CHAPTER 1 Introduction 1

| | |
|--|----|
| 1.1 Communicating pictures: the need for compression | 2 |
| 1.1.1 What is compression? | 2 |
| 1.1.2 Why do we need compression?..... | 3 |
| 1.2 Applications and drivers | 6 |
| 1.2.1 Generic drivers | 6 |
| 1.2.2 Application drivers and markets | 8 |
| 1.3 Requirements and trade-offs in a compression system..... | 9 |
| 1.3.1 The benefits of a digital solution..... | 9 |
| 1.3.2 Requirements | 10 |
| 1.3.3 Trade-offs..... | 10 |
| 1.4 The basics of compression..... | 11 |
| 1.4.1 Still image encoding | 11 |
| 1.4.2 Encoding video | 12 |
| 1.4.3 Measuring visual quality..... | 12 |
| 1.5 The need for standards..... | 12 |
| 1.5.1 Some basic facts about standards..... | 12 |
| 1.5.2 A brief history of video encoding standards | 13 |
| 1.6 Summary | 14 |
| References..... | 15 |

CHAPTER 2 The Human Visual System..... 17

| | |
|--|----|
| 2.1 Principles and theories of human vision | 19 |
| 2.1.1 Theories of vision | 19 |
| 2.2 Acquisition: the human eye | 20 |
| 2.2.1 Retinal tissue layers | 21 |
| 2.2.2 Optical processing..... | 23 |
| 2.2.3 Retinal photoreceptors and their distribution..... | 24 |
| 2.2.4 Visual processing in the retina | 26 |
| 2.3 The visual cortex..... | 28 |
| 2.3.1 Opponent processes | 29 |
| 2.3.2 Biased competition..... | 29 |

| | | |
|---------------|--|----|
| 2.3.3 | Adaptation processes | 29 |
| 2.3.4 | V1—the primary visual cortex..... | 30 |
| 2.3.5 | V2—the prestriate cortex | 30 |
| 2.3.6 | Dorsal and ventral streams | 30 |
| 2.3.7 | Extrastriate areas..... | 31 |
| 2.4 | Visual fields and acuity | 31 |
| 2.4.1 | Field of view | 31 |
| 2.4.2 | Acuity..... | 32 |
| 2.4.3 | Light, luminance, and brightness | 32 |
| 2.4.4 | Light level adaptation..... | 35 |
| 2.5 | Color processing | 36 |
| 2.5.1 | Opponent theories of color..... | 37 |
| 2.5.2 | CIE 1931 chromaticity chart..... | 39 |
| 2.6 | Spatial processing | 39 |
| 2.6.1 | Just noticeable difference, contrast, and Weber's law..... | 40 |
| 2.6.2 | Frequency-dependent contrast sensitivity | 40 |
| 2.6.3 | Multiscale edges..... | 44 |
| 2.6.4 | Perception of textures | 44 |
| 2.6.5 | Shape and object recognition | 44 |
| 2.6.6 | The importance of phase information | 45 |
| 2.7 | Perception of scale and depth | 46 |
| 2.7.1 | Size or scale | 46 |
| 2.7.2 | Depth cues..... | 47 |
| 2.7.3 | Depth cues and 3-D entertainment..... | 48 |
| 2.8 | Temporal and spatio-temporal response | 49 |
| 2.8.1 | Temporal CSF | 50 |
| 2.8.2 | Spatio-temporal CSF..... | 50 |
| 2.8.3 | Flicker and peripheral vision | 50 |
| 2.9 | Attention and eye movements..... | 52 |
| 2.9.1 | Saliency and attention | 52 |
| 2.9.2 | Eye movements | 53 |
| 2.10 | Visual masking..... | 53 |
| 2.10.1 | Texture masking | 53 |
| 2.10.2 | Edge masking..... | 55 |
| 2.10.3 | Temporal masking..... | 55 |
| 2.11 | Summary: a perceptual basis for image and video compression | 56 |
| 2.11.1 | Influential factors | 56 |
| 2.11.2 | What have we learnt?..... | 56 |
| | References..... | 59 |

| | |
|--|------------|
| CHAPTER 3 Discrete-Time Analysis for Images and Video | 63 |
| 3.1 Signal and picture sampling..... | 64 |
| 3.1.1 The sampling theorem..... | 65 |
| 3.1.2 Multidimensional sampling lattices | 69 |
| 3.2 Statistics of images | 70 |
| 3.2.1 Histograms and distributions | 70 |
| 3.2.2 Mean values | 70 |
| 3.2.3 Correlation in natural images..... | 71 |
| 3.3 Filtering and transforms..... | 76 |
| 3.3.1 Discrete-time linear systems..... | 76 |
| 3.3.2 Convolution..... | 76 |
| 3.3.3 Linear filters | 77 |
| 3.3.4 Filter frequency response..... | 79 |
| 3.3.5 Examples of practical filters..... | 80 |
| 3.3.6 Non-linear filters | 81 |
| 3.3.7 Linear transforms and the DFT | 82 |
| 3.4 Quantization..... | 84 |
| 3.4.1 Basic theory of quantization | 84 |
| 3.4.2 Adaptation to signal statistics | 86 |
| 3.4.3 HVS weighting..... | 87 |
| 3.4.4 Vector quantization | 87 |
| 3.5 Linear prediction..... | 87 |
| 3.5.1 Basic feedforward linear predictive coding | 87 |
| 3.5.2 Linear prediction with the predictor in the feedback loop | 90 |
| 3.5.3 Wiener Hopf equations and the Wiener filter..... | 92 |
| 3.6 Information and entropy | 93 |
| 3.6.1 Self-information | 93 |
| 3.6.2 Entropy..... | 94 |
| 3.6.3 Symbols and statistics | 96 |
| 3.7 Summary | 97 |
| References..... | 97 |
| CHAPTER 4 Digital Picture Formats and Representations | 99 |
| 4.1 Pixels, blocks, and pictures..... | 100 |
| 4.1.1 Pixels, samples, or pels | 100 |
| 4.1.2 Moving pictures | 102 |
| 4.1.3 Coding units and macroblocks..... | 103 |
| 4.1.4 Picture types and groups of pictures | 104 |

| | | |
|--|---|------------|
| 4.2 | Formats and aspect ratios..... | 106 |
| 4.2.1 | Aspect ratios..... | 106 |
| 4.2.2 | Displaying different formats | 110 |
| 4.3 | Picture scanning..... | 111 |
| 4.3.1 | Interlaced vs progressive scanning | 111 |
| 4.3.2 | Standards conversion | 112 |
| 4.4 | Gamma correction | 114 |
| 4.5 | Color spaces and color transformations..... | 116 |
| 4.5.1 | Color descriptions and the HVS | 116 |
| 4.5.2 | Sub-sampled color spaces | 121 |
| 4.5.3 | Bayer filtering | 123 |
| 4.6 | Measuring and comparing picture quality | 124 |
| 4.6.1 | Compression ratio and bit rate | 124 |
| 4.6.2 | Objective distortion and quality metrics | 125 |
| 4.6.3 | Subjective assessment | 128 |
| 4.7 | Rates and distortions..... | 129 |
| 4.7.1 | Rate-distortion characteristics | 129 |
| 4.7.2 | Rate-distortion optimization..... | 131 |
| 4.8 | Summary | 132 |
| | References..... | 132 |
| CHAPTER 5 Transforms for Image and Video Coding | | 133 |
| 5.1 | The principles of decorrelating transforms..... | 134 |
| 5.1.1 | The basic building blocks | 134 |
| 5.1.2 | Principal components and axis rotation | 135 |
| 5.2 | Unitary transforms | 137 |
| 5.2.1 | Basis functions and linear combinations..... | 137 |
| 5.2.2 | Orthogonality and normalization | 138 |
| 5.2.3 | Extension to 2-D | 139 |
| 5.3 | Basic transforms | 140 |
| 5.3.1 | The Haar transform | 140 |
| 5.3.2 | The Walsh–Hadamard transform | 141 |
| 5.3.3 | So why not use the discrete Fourier transform?..... | 144 |
| 5.4 | Optimum transforms | 146 |
| 5.4.1 | Discarding coefficients..... | 146 |
| 5.4.2 | The Karhunen–Loeve transform (KLT) | 147 |
| 5.4.3 | The KLT in practice | 148 |
| 5.5 | Discrete cosine transform (DCT)..... | 149 |
| 5.5.1 | Derivation of the DCT | 149 |
| 5.5.2 | DCT basis functions..... | 151 |
| 5.5.3 | Extension to 2-D: separability | 153 |

| | | |
|---|--|------------|
| 5.6 | Quantization of DCT coefficients | 155 |
| 5.7 | Performance comparisons..... | 160 |
| 5.7.1 | DCT vs DFT revisited..... | 160 |
| 5.7.2 | Comparison of transforms..... | 160 |
| 5.7.3 | Rate-distortion performance of the DCT | 161 |
| 5.8 | DCT implementation | 163 |
| 5.8.1 | Choice of transform block size | 163 |
| 5.8.2 | DCT complexity reduction | 164 |
| 5.8.3 | Field vs frame encoding for interlaced sequences | 166 |
| 5.8.4 | Integer transforms | 167 |
| 5.8.5 | DCT demo..... | 167 |
| 5.9 | JPEG | 167 |
| 5.10 | Summary..... | 169 |
| | References..... | 169 |
| CHAPTER 6 Filter Banks and Wavelet Compression | | 171 |
| 6.1 | Introduction to multiscale processing..... | 172 |
| 6.1.1 | The short-time Fourier transform and the Gabor transform | 173 |
| 6.1.2 | So what is a wavelet? | 174 |
| 6.1.3 | Wavelet and filter bank properties..... | 177 |
| 6.2 | Perfect reconstruction filter banks | 178 |
| 6.2.1 | Filter and decomposition requirements..... | 178 |
| 6.2.2 | The 1-D filter bank structure..... | 178 |
| 6.3 | Multirate filtering..... | 182 |
| 6.3.1 | Upsampling | 183 |
| 6.3.2 | Downsampling | 183 |
| 6.3.3 | System transfer function | 186 |
| 6.3.4 | Perfect reconstruction | 189 |
| 6.3.5 | Spectral effects of the two-channel decomposition | 191 |
| 6.4 | Useful filters and filter banks..... | 191 |
| 6.4.1 | Quadrature mirror filters | 192 |
| 6.4.2 | Wavelet filters..... | 194 |
| 6.4.3 | Multistage (multiscale) decompositions | 197 |
| 6.4.4 | Separability and extension to 2-D | 200 |
| 6.4.5 | Finite length sequences, edge artifacts, and boundary extension | 202 |
| 6.4.6 | Wavelet compression performance | 203 |
| 6.5 | Coefficient quantization and bit allocation | 204 |

| | | |
|---|--|------------|
| 6.5.1 | Bit allocation and zonal coding..... | 204 |
| 6.5.2 | Hierarchical coding..... | 207 |
| 6.6 | JPEG2000 | 207 |
| 6.6.1 | Overview | 207 |
| 6.6.2 | Architecture—bit planes and scalable coding..... | 207 |
| 6.6.3 | Coding performance..... | 208 |
| 6.6.4 | Region of interest coding | 208 |
| 6.6.5 | Benefits and status..... | 210 |
| 6.7 | Summary..... | 210 |
| | References..... | 210 |
| CHAPTER 7 Lossless Compression Methods | | 213 |
| 7.1 | Motivation for lossless image compression..... | 214 |
| 7.1.1 | Applications | 215 |
| 7.1.2 | Approaches | 216 |
| 7.1.3 | Dictionary methods | 216 |
| 7.2 | Symbol encoding | 217 |
| 7.2.1 | A generic model for lossless compression..... | 217 |
| 7.2.2 | Entropy, efficiency, and redundancy | 217 |
| 7.2.3 | Prefix codes and unique decodability | 218 |
| 7.3 | Huffman coding | 219 |
| 7.3.1 | The basic algorithm..... | 219 |
| 7.3.2 | Minimum variance Huffman coding..... | 221 |
| 7.3.3 | Huffman decoding..... | 223 |
| 7.3.4 | Modified Huffman coding..... | 224 |
| 7.3.5 | Properties of Huffman codes..... | 224 |
| 7.3.6 | Adaptive methods for Huffman encoding..... | 225 |
| 7.4 | Symbol formation and encoding..... | 229 |
| 7.4.1 | Dealing with sparse matrices | 229 |
| 7.4.2 | Symbol encoding in JPEG | 230 |
| 7.4.3 | JPEG performance examples | 235 |
| 7.4.4 | Lossless JPEG mode | 235 |
| 7.4.5 | Context-Adaptive Variable Length Coding (CAVLC) in H.264/AVC..... | 236 |
| 7.5 | Golomb coding | 239 |
| 7.5.1 | Unary codes | 239 |
| 7.5.2 | Golomb and Golomb–Rice codes | 239 |
| 7.5.3 | Exponential Golomb codes..... | 240 |
| 7.6 | Arithmetic coding | 241 |
| 7.6.1 | The basic arithmetic encoding algorithm..... | 241 |

| | | |
|--------------|---|-----|
| 7.6.2 | The basic arithmetic decoding algorithm..... | 244 |
| 7.6.3 | Advantages of arithmetic coding | 246 |
| 7.6.4 | Binary arithmetic coding..... | 247 |
| 7.6.5 | Tag generation with scaling | 249 |
| 7.6.6 | Context-adaptive arithmetic coding | 250 |
| 7.7 | Performance comparisons—Huffman vs arithmetic coding..... | 251 |
| 7.8 | Summary | 252 |
| | References..... | 252 |

CHAPTER 8 Coding Moving Pictures: Motion Prediction..... 255

| | | |
|--------------|---|-----|
| 8.1 | Temporal correlation and exploiting temporal redundancy..... | 256 |
| 8.1.1 | Why motion estimation? | 256 |
| 8.1.2 | Projected motion and apparent motion | 258 |
| 8.1.3 | Understanding temporal correlation | 259 |
| 8.1.4 | How to form the prediction..... | 260 |
| 8.1.5 | Approaches to motion estimation | 262 |
| 8.2 | Motion models and motion estimation | 263 |
| 8.2.1 | Problem formulation | 263 |
| 8.2.2 | Affine and high order models | 263 |
| 8.2.3 | Translation-only models | 265 |
| 8.2.4 | Pixel-recursive methods | 266 |
| 8.2.5 | Frequency domain motion estimation using phase correlation (PhC)..... | 267 |
| 8.3 | Block matching motion estimation (BMME) | 269 |
| 8.3.1 | Translational block matching..... | 269 |
| 8.3.2 | Matching criteria..... | 270 |
| 8.3.3 | Full search algorithm | 272 |
| 8.3.4 | Properties of block motion fields and error surfaces | 272 |
| 8.3.5 | Motion failure | 276 |
| 8.3.6 | Restricted and unrestricted vectors | 277 |
| 8.4 | Reduced complexity motion estimation | 277 |
| 8.4.1 | Pixel grids and search grids | 277 |
| 8.4.2 | Complexity of full search..... | 278 |
| 8.4.3 | Reducing search complexity | 279 |
| 8.4.4 | 2-D logarithmic search (TDL) | 280 |
| 8.4.5 | <i>N</i> -Step Search (NSS)..... | 281 |
| 8.4.6 | Diamond search | 282 |
| 8.4.7 | Hexagonal search | 284 |
| 8.4.8 | Initialization and termination criteria..... | 285 |

| | | |
|---|---|------------|
| 8.4.9 | Reduced complexity block matching algorithm performance comparisons..... | 286 |
| 8.5 | Motion vector coding..... | 287 |
| 8.5.1 | Motion vector prediction..... | 287 |
| 8.5.2 | Entropy coding of motion vectors..... | 287 |
| 8.6 | Summary..... | 288 |
| | References..... | 288 |
| CHAPTER 9 The Block-Based Hybrid Video Codec | | 291 |
| 9.1 | The block-based hybrid model for video compression..... | 292 |
| 9.1.1 | Picture types and prediction modes | 292 |
| 9.1.2 | Properties of the DFD signal..... | 293 |
| 9.1.3 | Operation of the video encoding loop..... | 294 |
| 9.1.4 | Operation of the video decoder..... | 295 |
| 9.2 | Intra-frame prediction..... | 298 |
| 9.2.1 | Intra-prediction for small luminance blocks | 298 |
| 9.2.2 | Intra-prediction for larger blocks | 300 |
| 9.3 | Sub-pixel motion estimation..... | 301 |
| 9.3.1 | Sub-pixel matching | 301 |
| 9.3.2 | Interpolation methods | 303 |
| 9.3.3 | Performance | 305 |
| 9.3.4 | Interpolation-free methods..... | 306 |
| 9.4 | Multiple reference frame motion estimation | 307 |
| 9.4.1 | Justification | 307 |
| 9.4.2 | Properties, complexity, and performance of MRF-ME | 308 |
| 9.4.3 | Reduced complexity MRF-ME..... | 308 |
| 9.5 | Variable block sizes for motion estimation..... | 309 |
| 9.5.1 | Influence of block size | 309 |
| 9.5.2 | Variable block sizes in practice..... | 310 |
| 9.6 | Variable sized transforms..... | 310 |
| 9.6.1 | Integer transforms | 310 |
| 9.6.2 | DC coefficient transforms | 313 |
| 9.7 | In-loop deblocking operations | 313 |
| 9.8 | Summary..... | 315 |
| | References..... | 315 |
| CHAPTER 10 Measuring and Managing Picture Quality..... | | 317 |
| 10.1 | General considerations and influences..... | 318 |
| 10.1.1 | What do we want to assess?..... | 319 |
| 10.1.2 | Influences on perceived quality..... | 319 |

| | | |
|---------------|--|-----|
| 10.2 | Subjective testing | 321 |
| 10.2.1 | Justification | 321 |
| 10.2.2 | Test sequences and conditions | 321 |
| 10.2.3 | Choosing subjects | 323 |
| 10.2.4 | Testing environment..... | 324 |
| 10.2.5 | Testing methodology and recording of results..... | 324 |
| 10.2.6 | Statistical analysis and significance testing | 328 |
| 10.2.7 | The complete evaluation process | 329 |
| 10.3 | Test data sets and how to use them | 330 |
| 10.3.1 | Databases | 330 |
| 10.3.2 | The relationship between Mean Opinion Score and an objective metric | 331 |
| 10.3.3 | Evaluating metrics using public (or private) databases.. | 332 |
| 10.4 | Objective quality metrics | 333 |
| 10.4.1 | Why do we need quality metrics?..... | 333 |
| 10.4.2 | A characterization of PSNR..... | 335 |
| 10.4.3 | A perceptual basis for metric development..... | 337 |
| 10.4.4 | Perception-based image and video quality metrics..... | 338 |
| 10.4.5 | The future of metrics..... | 341 |
| 10.5 | Rate–distortion optimization | 343 |
| 10.5.1 | Classical rate–distortion theory..... | 343 |
| 10.5.2 | Practical rate–distortion optimization | 345 |
| 10.5.3 | The influence of additional coding modes and parameters | 348 |
| 10.5.4 | From Rate–Distortion to Rate–Quality Optimization.... | 350 |
| 10.6 | Rate control..... | 350 |
| 10.6.1 | Buffering and HRD..... | 352 |
| 10.6.2 | Rate control in practice | 354 |
| 10.6.3 | Regions of interest and rate control | 357 |
| 10.7 | Summary | 357 |
| | References..... | 358 |

CHAPTER 11 Communicating Pictures: Delivery Across Networks **361**

| | | |
|---------------|--|-----|
| 11.1 | The operating environment..... | 362 |
| 11.1.1 | Characteristics of modern networks..... | 362 |
| 11.1.2 | Transmission types..... | 364 |
| 11.1.3 | Operating constraints | 365 |
| 11.1.4 | Error characteristics | 365 |
| 11.1.5 | The challenges and a solution framework..... | 367 |
| 11.2 | The effects of loss | 368 |

| | |
|---|------------|
| 11.2.1 Synchronization failure | 368 |
| 11.2.2 Header loss..... | 370 |
| 11.2.3 Spatial error propagation..... | 370 |
| 11.2.4 Temporal error propagation | 372 |
| 11.3 Mitigating the effect of bitstream errors | 373 |
| 11.3.1 Video is not the same as data!..... | 373 |
| 11.3.2 Error-resilient solutions..... | 374 |
| 11.4 Transport layer solutions | 375 |
| 11.4.1 Automatic Repeat request (ARQ)..... | 375 |
| 11.4.2 FEC channel coding | 376 |
| 11.4.3 Hybrid ARQ (HARQ) | 379 |
| 11.4.4 Packetization strategies | 379 |
| 11.5 Application layer solutions | 379 |
| 11.5.1 Network abstraction | 379 |
| 11.5.2 The influence of frame type | 380 |
| 11.5.3 Synchronization codewords | 382 |
| 11.5.4 Reversible VLC..... | 382 |
| 11.5.5 Slice structuring | 384 |
| 11.5.6 Error tracking | 385 |
| 11.6 Cross layer solutions..... | 386 |
| 11.6.1 Link adaptation | 386 |
| 11.7 Inherently robust coding strategies | 389 |
| 11.7.1 Error-Resilient Entropy Coding (EREC) | 389 |
| 11.7.2 Pyramid Vector Quantization (PVQ) | 394 |
| 11.8 Error concealment..... | 397 |
| 11.8.1 Detecting missing information..... | 397 |
| 11.8.2 Spatial error concealment (SEC) | 398 |
| 11.8.3 Temporal error concealment | 399 |
| 11.8.4 Hybrid methods with mode selection | 403 |
| 11.9 Congestion management and scalable video coding | 405 |
| 11.10 Summary..... | 408 |
| References..... | 408 |
| CHAPTER 12 Video Coding Standards..... | 411 |
| 12.1 The need for and role of standards | 412 |
| 12.1.1 The focus of video standardization..... | 412 |
| 12.1.2 The standardization process | 413 |
| 12.1.3 Intellectual property and licensing..... | 414 |
| 12.2 H.120 | 414 |
| 12.2.1 Brief history | 414 |
| 12.2.2 Primary features..... | 415 |

| | | |
|---------------|--|-----|
| 12.3 | H.261 | 415 |
| 12.3.1 | Brief history | 415 |
| 12.3.2 | Picture types and primary features..... | 415 |
| 12.4 | MPEG-2/DVB..... | 417 |
| 12.4.1 | Brief history | 417 |
| 12.4.2 | Picture types and primary features..... | 417 |
| 12.4.3 | MPEG-2 profiles and levels | 418 |
| 12.5 | H.263 | 419 |
| 12.5.1 | Brief history | 419 |
| 12.5.2 | Picture types and primary features..... | 419 |
| 12.6 | MPEG-4 | 423 |
| 12.6.1 | Brief history | 423 |
| 12.6.2 | Picture types and primary features..... | 424 |
| 12.7 | H.264/AVC | 426 |
| 12.7.1 | Brief history | 426 |
| 12.7.2 | Primary features | 426 |
| 12.7.3 | Network abstraction and bitstream syntax | 427 |
| 12.7.4 | Pictures and partitions..... | 429 |
| 12.7.5 | The video coding layer..... | 430 |
| 12.7.6 | Profiles and levels | 434 |
| 12.7.7 | Performance | 435 |
| 12.7.8 | Scalable extensions | 435 |
| 12.7.9 | Multiview extensions | 435 |
| 12.8 | H.265/HEVC | 436 |
| 12.8.1 | Brief background | 436 |
| 12.8.2 | Primary features | 436 |
| 12.8.3 | Network abstraction and high level syntax | 437 |
| 12.8.4 | Pictures and partitions..... | 438 |
| 12.8.5 | The video coding layer (VCL)..... | 440 |
| 12.8.6 | Profiles and levels | 446 |
| 12.8.7 | Extensions | 446 |
