| Foreword by Sir Richard Friend | xv |
| Preface | xvi |
| Part 1: Multiphase Systems: Synthesis, Properties and Applications | |
| 1 Conjugated Polymer-based Blends, Copolymers, and Composites: Synthesis, Properties, and Applications | 3 |
| <i>Parveen Saini</i> | |
| 1.1 Introduction | 4 |
| 1.2 CPs/ICPs-Based Blends | 7 |
| 1.2.1 Classification of CPs/ICPs-Based Blends | 8 |
| 1.3 CPs/ICPs-Based Copolymers (CCPs) | 11 |
| 1.3.1 Types of CPs/ICPs-Based Copolymers | 11 |
| 1.3.2 Sub-Classification of Linear or Graft BCPs | 20 |
| 1.4 CPs/ICPs-Based Composites/Nanocomposites/Hybrids | 23 |
| 1.4.1 Categorization of CPs/ICPs-Based NCs | 26 |
| 1.5 Interpenetrating/Semi-Interpenetrating Polymer Network (IPN/SIPN) | 29 |
| 1.6 Synthesis of CPs/ICPs-Based BLNs, CCPs, and CMPs/NCs/HYBs | 30 |
| 1.6.1 Synthesis of Undoped CPs-Based BLNs | 30 |
| 1.6.2 Synthesis of Conjugated Polymers-Based Copolymers | 39 |
| 1.6.3 CPs/ICPs-Based CMPs/NCs | 52 |
| 1.7 Applications of CPs/ICPs-Based BLNs, CCPs, and CMPs/NCs/HYBs | 63 |
| 1.7.1 ICP-Based Systems | 63 |
| 1.7.2 CPs-Based Systems | 63 |
| 1.8 Conclusions | 79 |
| Acknowledgments | 80 |
| References | 80 |

| | | |
|----------|--|------------|
| 2 | Progress in Polyaniline Composites with Transition Metal Oxides | 119 |
| | <i>Gordana Ćirić-Marjanović</i> | |
| 2.1 | Introduction | 119 |
| 2.2 | PANI/Transition Metal Oxide Composites | 120 |
| 2.2.1 | PANI Composites with Oxides of the Copper Group of Transition Metals | 121 |
| 2.2.2 | PANI Composites with Oxides of the Zinc Group of Transition Metals | 121 |
| 2.2.3 | PANI Composites with Oxides of the Scandium Group of Transition Metals | 124 |
| 2.2.4 | PANI Composites with Oxides of the Titanium Group of Transition Metals | 126 |
| 2.2.5 | PANI Composites with Oxides of the Vanadium Group of Transition Metals | 131 |
| 2.2.6 | PANI Composites with Oxides of the Chromium Group of Transition Metals | 132 |
| 2.2.7 | PANI Composites with Oxides of the Manganese Group of Transition Metals | 137 |
| 2.2.8 | PANI Composites with Oxides of Iron, Cobalt, and Nickel Groups of Transition Metals | 140 |
| 2.3 | Conclusions and Outlook | 151 |
| | Abbreviations | 152 |
| | References | 153 |
| 3 | Conjugated-Polymer/Quantum-Confined Nanomaterials-Based Hybrids for Optoelectronic Applications | 163 |
| | <i>Anuushka Pal, Parveen Saini, and Sameer Sapra</i> | |
| 3.1 | Introduction | 164 |
| 3.2 | Quantum-Confined Nanomaterials (QCNs) | 165 |
| 3.2.1 | Inorganic Quantum-Confined Nanomaterials (QCNs) | 166 |
| 3.2.2 | Organic Quantum-Confined Nanomaterials (QCNs) | 167 |
| 3.3 | Synthetic Approaches for Quantum-Confined Nanomaterials (QCNs) | 168 |
| 3.3.1 | Synthesis of Inorganic Quantum-Confined Nanomaterials | 169 |
| 3.3.2 | Synthesis of Organic Quantum-Confined Nanomaterials | 174 |
| 3.3.3 | Optical Properties | 176 |

| | | |
|--|--|------------|
| 3.4 | Conjugated-Polymer/Quantum-Confined Nanomaterials (CP/QCN) Hybrids | 183 |
| 3.4.1 | Methodologies for Making Conjugated-Polymer/Inorganic QCN Hybrids | 183 |
| 3.4.2 | Chemical Methods | 184 |
| 3.5 | Optoelectronic Applications of Hybrids | 190 |
| 3.5.1 | Hybrid Solar Cell | 190 |
| 3.5.2 | Light-Emitting Diodes | 201 |
| 3.5.3 | GQDs/Conjugated-Polymer-Based Counter Electrode for Dye-Sensitized Solar Cells | 208 |
| 3.6 | Outlook and Perspective: Current Challenges and Future Scope/Prospects | 210 |
| | Acknowledgments | 211 |
| | References | 211 |
| 4 | Graphene/Conjugated Polymer Nanocomposites for Optoelectronic and Biological Applications | 229 |
| | <i>Tapas Kuila, Yu Dong Sheng, and Naresh Chandra Murmu</i> | |
| 4.1 | Introduction | 230 |
| 4.2 | Graphene/Conjugated Polymer Nanocomposites | 231 |
| 4.2.1 | Preparation of Graphene/Conjugated Polymer Nanocomposites | 232 |
| 4.2.2 | Different Types of Conjugated Polymer Nanocomposites and Their Properties | 234 |
| 4.2.3 | Characterizations of Graphene/Conjugated Polymer Nanocomposites | 252 |
| 4.3 | Applications of Graphene/Conjugated Polymer Nanocomposites | 263 |
| 4.3.1 | Optoelectronic Application | 263 |
| 4.3.2 | Biological Applications | 268 |
| 4.4 | Conclusions and Future Scope | 270 |
| | Acknowledgements | 271 |
| | References | 271 |
| Part 2: Energy Harvesting and Storage Materials | | |
| 5 | Conjugated Polymers-Based Blends, Composites and Copolymers for Photovoltaics | 283 |
| | <i>Ashish Dubey, Parveen Saini, and Qiquan Qiao</i> | |
| 5.1 | Introduction | 284 |
| 5.2 | Organic Photovoltaic (OPV) Cells | 284 |

| | | |
|----------|--|------------|
| 5.3 | OPV Device Architecture and Working Mechanism | 287 |
| 5.4 | Solar Cell Terminologies and Characterization Parameters | 290 |
| 5.4.1 | Air Mass (AM) | 290 |
| 5.4.2 | Open-Circuit Voltage (V_{oc}) | 291 |
| 5.4.3 | Short Circuit Current Density (J_{sc}) | 292 |
| 5.4.4 | Fill Factor (FF) | 292 |
| 5.4.5 | Power Conversion Efficiency (PCE) (η) | 293 |
| 5.4.6 | Quantum Efficiency (QE) | 294 |
| 5.5 | CPs-Based Blends, Composites and Copolymers for OPVs | 295 |
| 5.5.1 | Polymer-Fullerene BHJ Blends | 296 |
| 5.5.2 | Organic-Inorganic Composites/Hybrids | 303 |
| 5.5.3 | Polymer/Carbon Nanotube Composites | 307 |
| 5.5.4 | Polymer/Graphene-Based Composites | 312 |
| 5.6 | Conjugated Copolymers for PVs | 314 |
| 5.6.1 | Donor-Acceptor Type Alternating Copolymers | 315 |
| 5.6.2 | Block Copolymers with Built in p-Type Donor and n-Type Acceptor | 320 |
| 5.7 | Conclusions: Current Challenges and Prospects | 326 |
| | Acknowledgements | 327 |
| | References | 327 |
| 6 | Conducting Polymer-Based Nanocomposites for Thermoelectric Applications | 339 |
| | <i>Qin Yao, Lidong Chen, and Sanyin Qu</i> | |
| 6.1 | Introduction | 340 |
| 6.2 | Synthesis Methods | 346 |
| 6.2.1 | In Situ Polymerization | 346 |
| 6.2.2 | Solution Mixing | 354 |
| 6.2.3 | Mechanical Mixing | 359 |
| 6.3 | TE Properties of CP/Inorganic Nanocomposites | 361 |
| 6.3.1 | CP/CNT Composite | 362 |
| 6.3.2 | CP/Graphene Composites | 368 |
| 6.3.3 | CP/Metal Composites | 371 |
| 6.3.4 | CP/Metal Compounds Composites | 373 |
| 6.4 | Summary | 376 |
| | References | 377 |

| | | |
|----------|--|------------|
| 7 | Conjugated-Polymer/Inorganic Nanocomposites as Electrode Materials for Li-Ion Batteries | 379 |
| | <i>Qingsheng Gao, Lichun Yang, and Ning Liu</i> | |
| 7.1 | Introduction | 379 |
| 7.2 | Nanocomposites of Conjugated Polymer/ Inorganic as Cathode Materials | 383 |
| 7.2.1 | LiFePO ₄ | 383 |
| 7.2.2 | MnO ₂ | 386 |
| 7.2.3 | V ₂ O ₅ | 393 |
| 7.3 | Nanocomposites of Conjugated Polymers/ Inorganic as Anode Materials | 402 |
| 7.3.1 | Silicon | 402 |
| 7.3.2 | SnO ₂ | 405 |
| 7.3.3 | Other Conjugated Polymer-Based Anode Materials | 410 |
| 7.4 | Conclusion | 412 |
| | Acknowledgments | 413 |
| | References | 413 |
| 8 | Polypyrrole/Inorganic Nanocomposites for Supercapacitors | 419 |
| | <i>Peng Liu</i> | |
| 8.1 | Introduction | 419 |
| 8.2 | Polypyrrole/Carbon Nanocomposites | 420 |
| 8.2.1 | Carbon Nanoparticles | 421 |
| 8.2.2 | Carbon Nanofibers | 421 |
| 8.2.3 | Carbon Nanotubes | 422 |
| 8.2.4 | Graphene and Derivatives | 427 |
| 8.3 | Polypyrrole/Metal Oxide Nanocomposites | 432 |
| 8.3.1 | Manganese Oxides | 432 |
| 8.3.2 | Titanium Oxides | 435 |
| 8.3.3 | Ruthenium Oxides | 436 |
| 8.3.4 | Other Metal Oxides | 436 |
| 8.4 | Polypyrrole/Clay Nanocomposites | 437 |
| 8.5 | Other Polypyrrole/Inorganic Nanocomposites | 438 |
| 8.6 | Polypyrrole Ternary Composites | 439 |
| 8.7 | Conclusion and Perspectives | 443 |
| | Acknowledgments | 444 |
| | References | 444 |

Part 3: Advanced Materials for Environmental Applications

| | | |
|-----------|--|------------|
| 9 | Intrinsically Conducting Polymer-Based Blends and Composites for Electromagnetic Interference Shielding: Theoretical and Experimental Aspects | 451 |
| | <i>Parveen Saini</i> | |
| 9.1 | Introduction | 451 |
| 9.2 | Shielding Phenomenon | 453 |
| 9.2.1 | Theoretical Shielding Effectiveness | 454 |
| 9.2.2 | Experimental Shielding Effectiveness | 467 |
| 9.2.3 | Complex Permittivity and Permeability | 469 |
| 9.2.4 | Shielding Materials and Design Considerations | 472 |
| 9.2.5 | Synthesis of ICPs-Based Hybrids (Blends and Composites) | 475 |
| 9.2.6 | Electrical Properties of ICPs-Based Blends and Composites | 481 |
| 9.2.7 | EMI Shielding Performance of ICPs-Loaded Blends and Composites | 483 |
| 9.2.8 | EMI Shielding Performance of ICP-Matrix-Based Composites | 492 |
| 9.2.9 | EMI Shielding and Microwave Absorbing Performance of ICPs/Filler Hybrid-Loaded Polymer Matrix Composites | 505 |
| 9.3 | Conclusions | 507 |
| | References | 508 |
| 10 | Anticorrosion Coatings Based on Conjugated Polymers | 519 |
| | <i>M. Federica De Riccardis</i> | |
| 10.1 | Introduction | 519 |
| 10.2 | Basic Concepts of Corrosion | 522 |
| 10.3 | Corrosion Prevention | 524 |
| 10.4 | Corrosion Tests | 527 |
| 10.4.1 | Immersion Tests | 528 |
| 10.4.2 | Cabinet Tests | 529 |
| 10.4.3 | Electrochemical Tests | 530 |
| 10.5 | Conjugated Polymers as Anticorrosion Layers | 538 |
| 10.6 | Conjugated Polymers Nanocomposite as Anticorrosion Layers | 552 |
| 10.7 | Conclusions | 574 |
| | References | 575 |

| | |
|--|------------|
| 11 Conjugated Polymer-Based Composites for Water Purification | 581 |
| <i>Jiaying Li, Yongshun Huang, and Dadong Shao</i> | |
| 11.1 Introduction | 582 |
| 11.2 Adsorption Phenomenon | 583 |
| 11.2.1 Adsorption Isotherms | 584 |
| 11.2.2 Adsorption Kinetics | 588 |
| 11.2.3 Adsorption Thermodynamics | 589 |
| 11.3 PANI-Related Composites in Water Purification | 591 |
| 11.3.1 PANI/Inorganic Composites | 592 |
| 11.3.2 PANI/Organic Composites | 594 |
| 11.4 PPy-Related Composites in Water Purification | 601 |
| 11.4.1 PPy/Inorganic Composites | 601 |
| 11.4.2 PPy/Organic Composites | 602 |
| 11.5 Miscellaneous Conjugated Polymer Composites in Water Purification | 606 |
| 11.6 Conclusion | 609 |
| Acknowledgment | 609 |
| References | 609 |

Part 4: Sensing and Responsive Materials

| | |
|--|------------|
| 12 Conjugated Polymer Nanocomposites-Based Chemical Sensors | 621 |
| <i>Pradip Kar, Arup Choudhury, and Sushil Kumar Verma</i> | |
| 12.1 Introduction | 622 |
| 12.2 Conjugated Polymer Nanocomposites as Chemical Receptor | 626 |
| 12.3 General Methods for Preparation of Conjugated Polymer Nanocomposite | 631 |
| 12.3.1 Ex-situ Method | 632 |
| 12.3.2 In-situ Method | 642 |
| 12.4 Influence of Properties of Conjugated Polymer by Interaction with Nano-Filler | 644 |
| 12.5 Fabrication of Conjugated Polymer Nanocomposite Layer/Film for Sensor | 647 |
| 12.5.1 Electrochemical Deposition | 647 |
| 12.5.2 Pellet Preparation | 648 |
| 12.5.3 Dip Coating | 649 |
| 12.5.4 Spin Coating | 651 |

| | | |
|-----------|--|------------|
| 12.5.5 | Drop Coating | 652 |
| 12.5.6 | Film Casting | 653 |
| 12.5.7 | Printing | 654 |
| 12.5.8 | Other Methods | 655 |
| 12.6 | Chemical Sensing Performance of Conjugated Polymer-Based Nanocomposites | 656 |
| 12.6.1 | Sensing by Conjugated Polymer/Organic Nanocomposites | 656 |
| 12.6.2 | Sensing by Conjugated Polymer/Inorganic Nanocomposites | 658 |
| 12.7 | Mechanism of Chemical Sensing by Conjugated Polymer Nanocomposite | 670 |
| 12.7.1 | Strong Chemical Interaction with the Conjugated Polymer | 672 |
| 12.7.2 | Weak Physical Interaction with the Conjugated Polymer | 674 |
| 12.7.3 | Weak Physical Interaction with the Nanomaterial | 677 |
| 12.8 | Challenges and Prospects | 679 |
| | References | 681 |
| 13 | Conjugated Polymer Nanocomposites for Biosensors | 687 |
| | <i>Deepshikha Saini</i> | |
| 13.1 | Introduction | 687 |
| 13.2 | Synthesis of Conducting Polymer Nanocomposites | 690 |
| 13.2.1 | Conducting Polymer Nanocomposites with Carbon Nanotubes (CNTs) | 691 |
| 13.2.2 | Conducting Polymer Nanocomposites with Metal Nanoparticles | 694 |
| 13.2.3 | Conducting Polymer Nanocomposites with Metal Oxides | 696 |
| 13.2.4 | Conducting Polymer Nanocomposites with Metal Phthalocyanines and Porphyrins | 698 |
| 13.2.5 | Conducting Polymer Nanocomposites with Biological Materials | 700 |
| 13.2.6 | Conducting Polymer Nanocomposites with Graphene | 702 |

| | | |
|-----------|--|------------|
| 13.3 | Current and Emerging Applications of Conducting Polymer Nanocomposites in Biosensors | 706 |
| 13.3.1 | Catalytic Biosensors | 707 |
| 13.3.2 | Bioaffinity Sensor | 714 |
| 13.4 | Conclusions and Outlook | 719 |
| | References | 722 |
| 14 | Polyaniline Nanocomposites for Smart Electrorheological Fluid Applications | 731 |
| | <i>Jianbo Yin and Xiaopeng Zhao</i> | |
| 14.1 | Introduction | 731 |
| 14.2 | PANI as Filler for ER Fluids | 734 |
| 14.3 | Core/Shell-Structured PANI Nanocomposites for ER Fluids | 737 |
| 14.3.1 | PANI-Coated Core/Shell-Structured Nanocomposites | 737 |
| 14.3.2 | PANI-Encapsulated Core/Shell-Structured Nanocomposites | 743 |
| 14.4 | Pani-Intercalated Nanocomposites for ER Fluids | 747 |
| 14.4.1 | PANI/Clay Nanocomposites | 747 |
| 14.4.2 | PANI/Mesoporous Silica Nanocomposites | 750 |
| 14.5 | Conclusions | 752 |
| | Acknowledgments | 752 |
| | References | 752 |
| | Index | 759 |
