

Contents

Acknowledgments	xI
Introduction.....	xxxiii
Part I: Getting Started	1
Chapter 1: Starting with Linux	3
Understanding What Linux Is	4
Understanding How Linux Differs from Other Operating Systems.....	6
Exploring Linux History	6
Free-flowing UNIX culture at Bell Labs.....	7
Commercialized UNIX	9
Berkeley Software Distribution arrives	9
UNIX Laboratory and commercialization	10
GNU transitions UNIX to freedom	11
BSD loses some steam	13
Linus builds the missing piece	13
OSI open source definition	14
Understanding How Linux Distributions Emerged	16
Choosing a Red Hat distribution	17
Using Red Hat Enterprise Linux	17
Using Fedora.....	18
Choosing Ubuntu or another Debian distribution	19
Finding Professional Opportunities with Linux Today	20
Understanding how companies make money with Linux	21
Becoming Red Hat certified	22
RHCSA topics.....	23
RHCE topics	24
Summary.....	26
Chapter 2: Creating the Perfect Linux Desktop.	29
Understanding Linux Desktop Technology	30
Starting with the Fedora GNOME Desktop	
Live image	32
Using the GNOME 3 Desktop	33
After the computer boots up	33
Navigating with the mouse	34

Contents

Navigating with the keyboard	38
Setting up the GNOME 3 desktop	41
Extending the GNOME 3 desktop	42
Using GNOME shell extensions	42
Using the GNOME Tweak Tool	44
Starting with desktop applications	45
Managing files and folders with Nautilus	45
Installing and managing additional software	46
Playing music with Rhythmbox	48
Stopping the GNOME 3 desktop	49
Using the GNOME 2 Desktop	49
Using the Metacity window manager	50
Changing GNOME's appearance	52
Using the GNOME panels	53
Using the Applications and System menus	54
Adding an applet	54
Adding another panel	55
Adding an application launcher	55
Adding a drawer	56
Changing panel properties	57
Adding 3D effects with AIGLX	58
Summary	60
Exercises	61

Part II: Becoming a Linux Power User

63

Chapter 3: Using the Shell	65
About Shells and Terminal Windows	66
Using the shell prompt	67
Using a terminal window	68
Using virtual consoles	69
Choosing Your Shell	69
Running Commands	70
Understanding command syntax	71
Locating commands	74
Recalling Commands Using Command History	76
Command-line editing	77
Command-line completion	79
Command-line recall	80
Connecting and Expanding Commands	82
Piping between commands	82
Sequential commands	83
Background commands	83
Expanding commands	84

Expanding arithmetic expressions	84
Expanding variables	85
Using Shell Variables	85
Creating and using aliases.....	87
Exiting the shell.....	88
Creating Your Shell Environment	88
Configuring your shell	88
Setting your prompt	89
Adding environment variables.....	91
Getting Information about Commands	92
Summary.....	94
Exercises	95
Chapter 4: Moving around the Filesystem	97
Using Basic Filesystem Commands	100
Using Metacharacters and Operators	102
Using file-matching metacharacters	102
Using file-redirection metacharacters	103
Using brace expansion characters	105
Listing Files and Directories	105
Understanding File Permissions and Ownership	109
Changing permissions with chmod (numbers)	111
Changing permissions with chmod (letters).....	111
Setting default file permission with umask	112
Changing file ownership.....	113
Moving, Copying, and Removing Files.....	114
Summary.....	115
Exercises	115
Chapter 5: Working with Text Files	117
Editing Files with vim and vi.....	117
Starting with vi	119
Adding text.....	119
Moving around in the text.....	120
Deleting, copying, and changing text.....	121
Pasting (putting) text.....	122
Repeating commands	122
Exiting vi.....	122
Skipping around in the file	123
Searching for text	124
Using ex mode.....	124
Learning more about vi and vim	124
Finding Files.....	125
Using locate to find files by name	125

Contents

Searching for files with find	127
Finding files by name	127
Finding files by size	128
Finding files by user	128
Finding files by permission	129
Finding files by date and time	130
Using 'not' and 'or' when finding files	131
Finding files and executing commands	131
Searching in files with grep	132
Summary	134
Exercises	134
Chapter 6: Managing Running Processes	137
Understanding Processes	137
Listing Processes	138
Listing processes with ps	138
Listing and changing processes with top	140
Listing processes with System Monitor	142
Managing Background and Foreground Processes	144
Starting background processes	144
Using foreground and background commands	145
Killing and Renicing Processes	146
Killing processes with kill and killall	146
Using kill to signal processes by PID	147
Using killall to signal processes by name	148
Setting processor priority with nice and renice	148
Limiting Processes with cgroups	149
Summary	151
Exercises	151
Chapter 7: Writing Simple Shell Scripts	153
Understanding Shell Scripts	153
Executing and debugging shell scripts	154
Understanding shell variables	154
Special shell positional parameters	156
Reading in parameters	157
Parameter expansion in bash	157
Performing arithmetic in shell scripts	158
Using programming constructs in shell scripts	159
The "if...then" statements	159
The case command	162
The "for...do" loop	163
The "while...do" and "until...do" loops	164
Trying some useful text manipulation programs	164
The general regular expression parser	165

Remove sections of lines of text (cut).....	165
Translate or delete characters (tr)	165
The stream editor (sed)	166
Using simple shell scripts.....	167
Telephone list.....	167
Backup script	168
Summary.....	168
Exercises	169

Part III: Becoming a Linux System Administrator 171

Chapter 8: Learning System Administration 173

Understanding System Administration	173
Using Graphical Administration Tools.....	175
Using system-config-* tools.....	175
Using browser-based admin tools	177
Using the root user account.....	177
Becoming root from the shell (su command)	178
Allowing administrative access via the GUI.....	180
Gaining administrative access with sudo.....	180
Exploring Administrative Commands, Configuration Files, and Log Files	182
Administrative commands	182
Administrative configuration files	183
Administrative log files and systemd journal.....	188
Using journalctl to view the systemd journal	188
Managing log messages with rsyslogd.....	189
Using Other Administrative Accounts.....	189
Checking and Configuring Hardware.....	190
Checking your hardware	191
Managing removable hardware	194
Working with loadable modules	197
Listing loaded modules.....	197
Loading modules.....	198
Removing modules	198
Summary.....	199
Exercises	199

Chapter 9: Installing Linux 201

Choosing a Computer	202
Installing Fedora from Live media	203
Installing Red Hat Enterprise Linux from	
Installation Media	208
Understanding Cloud-Based Installations.....	211
Installing Linux in the Enterprise	211

Contents

Exploring Common Installation Topics	213
Upgrading or installing from scratch.....	213
Dual booting	214
Installing Linux to run virtually	216
Using installation boot options	216
Boot options for disabling features	217
Boot options for video problems.....	217
Boot options for special installation types.....	218
Boot options for kickstarts and remote repositories.....	218
Miscellaneous boot options.....	219
Using specialized storage	219
Partitioning hard drives	220
Understanding different partition types.....	221
Reasons for different partitioning schemes.....	222
Tips for creating partitions.....	222
Using the GRUB boot loader.....	224
Using GRUB Legacy (version 1)	225
Using GRUB 2	229
Summary.....	231
Exercises	231
Chapter 10: Getting and Managing Software	233
Managing Software on the Desktop	233
Going Beyond the Software Window	235
Understanding Linux RPM and DEB Software Packaging.....	236
Understanding DEB packaging	237
Understanding RPM packaging	238
What is in an RPM?	238
Where do RPMs come from?.....	239
Installing RPMs	239
Managing RPM Packages with YUM.....	240
Understanding how yum works.....	241
1. Checking /etc/yum.conf	242
2. Checking /etc/sysconfig/rhn/up2date (RHEL only)	242
3. Checking /etc/yum.repos.d/*.repo files.....	243
4. Downloading RPM packages and metadata from a YUM repository	243
5. RPM packages installed to Linux file system.....	244
6. Store YUM repository metadata to local RPM database.....	244
Using YUM with third-party software repositories.....	244
Managing software with the YUM command	245
Searching for packages.....	246
Installing and removing packages	247
Updating packages.....	249
Updating groups of packages	250

Maintaining your RPM package database and cache.....	251
Downloading RPMs from a yum repository	252
Installing, Querying, and Verifying Software	
with the rpm Command.....	252
Installing and removing packages with rpm	253
Querying rpm information	254
Verifying RPM packages.....	255
Managing Software in the Enterprise.....	256
Summary.....	257
Exercises	258
Chapter 11: Managing User Accounts	259
Creating User Accounts.....	259
Adding users with useradd.....	262
Setting user defaults	265
Modifying users with usermod	266
Deleting users with userdel.....	268
Understanding Group Accounts	268
Using group accounts.....	269
Creating group accounts.....	270
Managing Users in the Enterprise.....	270
Setting permissions with Access Control Lists	271
Setting ACLs with setfacl	272
Setting default ACLs	273
Enabling ACLs.....	274
Adding directories for users to collaborate	276
Creating group collaboration directories (set GID bit).....	276
Creating restricted deletion directories (sticky bit)	278
Centralizing User Accounts.....	278
Using the Users window	279
Using the Authentication Configuration window.....	279
Summary.....	281
Exercises	281
Chapter 12: Managing Disks and Filesystems	283
Understanding Disk Storage.....	283
Partitioning Hard Disks.....	285
Understanding partition tables.....	286
Viewing disk partitions.....	286
Creating a single-partition disk.....	288
Creating a multiple-partition disk.....	292
Using Logical Volume Management Partitions.....	295
Checking an existing LVM.....	296
Creating LVM logical volumes	299
Growing LVM logical volumes.....	300

Contents

Mounting Filesystems.....	301
Supported filesystems.....	301
Enabling swap areas	303
Disabling a swap area	304
Using the fstab file to define mountable file systems.....	305
Using the mount command to mount file systems	307
Mounting a disk image in loopback.....	308
Using the umount command.....	309
Using the mkfs Command to Create a Filesystem	310
Summary.....	311
Exercises	311

Part IV: Becoming a Linux Server Administrator **313**

CHAPTER 13: Understanding Server Administration 315

Starting with Server Administration	316
Step 1: Install the server.....	316
Step 2: Configure the server	318
Using configuration files	318
Checking the default configuration	319
Step 3: Start the server.....	319
Step 4: Secure the server.....	321
Password protection.....	321
Firewalls	321
TCP Wrappers.....	322
SELinux	322
Security settings in configuration files.....	322
Step 5: Monitor the server.....	322
Configure logging.....	322
Run system activity reports.....	323
Keep system software up to date.....	323
Check the filesystem for signs of crackers	323
Managing Remote Access with the Secure Shell Service	323
Starting the openssh-server service.....	324
Using SSH client tools.....	326
Using ssh for remote login.....	326
Using ssh for remote execution	328
Copying files between systems with scp and rsync	329
Interactive copying with sftp	332
Using key-based (passwordless) authentication.....	332
Configuring System Logging	334
Enabling system logging with rsyslog	334
Understanding the rsyslog.conf file	335
Understanding the messages log file.....	337

Setting up and using a loghost with rsyslogd.....	337
Watching logs with logwatch.....	339
Checking System Resources with sar.....	340
Checking System Space.....	341
Displaying system space with df.....	342
Checking disk usage with du.....	342
Finding disk consumption with find	343
Managing Servers in the Enterprise.....	344
Summary.....	344
Exercises	345
Chapter 14: Administering Networking.....	347
Configuring Networking for Desktops.....	348
Checking your network interfaces.....	350
Checking your network from NetworkManager	350
Checking your network from the command line	352
Configuring network interfaces	355
Setting IP addresses manually	355
Setting IP address aliases	356
Setting routes	357
Configuring a network proxy connection.....	358
Configuring Networking from the Command Line.....	360
Editing a connection	360
Understanding networking configuration files	362
Network interface files	363
Other networking files.....	365
Setting alias network interfaces	367
Setting up Ethernet channel bonding	368
Setting custom routes.....	370
Configuring Networking in the Enterprise.....	371
Configuring Linux as a router.....	371
Configuring Linux as a DHCP server	372
Configuring Linux as a DNS server	372
Configuring Linux as a proxy server.....	373
Summary.....	374
Exercises	374
Chapter 15: Starting and Stopping Services	377
Understanding the Initialization Daemon (init or systemd).....	378
Understanding the classic init daemons	380
Understanding the Upstart init daemon	386
Learning Upstart init daemon basics	386
Learning Upstart's backward compatibility to SysVinit	388
Understanding systemd initialization	392

Contents

Learning systemd basics.....	392
Learning systemd's backward compatibility to SysVinit.....	397
Checking the Status of Services	399
Checking services for SysVinit systems	400
Checking services for Upstart systems	401
Checking services for systemd systems	402
Stopping and Starting Services	403
Stopping and starting SysVinit services	403
Stopping and starting Upstart services	405
Stopping and starting systemd services	406
Stopping a service with systemd	406
Starting a service with systemd.....	406
Restarting a service with systemd.....	407
Reloading a service with systemd.....	407
Enabling Persistent Services	408
Configuring persistent services for SysVinit.....	408
Configuring persistent services for Upstart.....	409
Configuring persistent services for systemd.....	410
Enabling a service with systemd	410
Disabling a service with systemd	411
Configuring a Default Runlevel or Target Unit	412
Configuring the SysVinit default runlevel.....	412
Configuring the default runlevel in Upstart.....	413
Configuring the default target unit for systemd.....	413
Adding New or Customized Services.....	414
Adding new services to SysVinit	414
Step 1: Create a new or customized service script file	415
Step 2: Add the service script to /etc/rc.d/init.d.....	416
Step 3: Add the service to runlevel directories.....	417
Adding new services to Upstart	417
Adding new services to systemd	419
Step 1: Create a new or customized service configuration unit file	419
Step 2: Move the service configuration unit file	420
Step 3: Add the service to the Wants directory.....	420
Summary.....	422
Exercises	422
Chapter 16: Configuring a Print Server.	423
Common UNIX Printing System	423
Setting Up Printers	425
Adding a printer automatically.....	425
Using web-based CUPS administration	426
Using the Print Settings window	428
Configuring local printers with the Print Settings window.....	429

Configuring remote printers.....	432
Adding a remote CUPS printer.....	433
Adding a remote UNIX (LDP/LPR) printer.....	433
Adding a Windows (SMB) printer.....	434
Working with CUPS Printing	435
Configuring the CUPS server (cupsd.conf).....	436
Starting the CUPS server.....	437
Configuring CUPS printer options manually	438
Using Printing Commands.....	439
Printing with lpr.....	440
Listing status with lpc.....	440
Removing print jobs with lprm	441
Configuring Print Servers	441
Configuring a shared CUPS printer	442
Configuring a shared Samba printer	443
Understanding smb.conf for printing.....	444
Setting up SMB clients	445
Summary.....	446
Exercises	446
Chapter 17: Configuring a Web Server	449
Understanding the Apache Web Server.....	449
Getting and Installing Your Web Server	450
Understanding the httpd package.....	450
Installing Apache	453
Starting Apache.....	454
Securing Apache	455
Apache file permissions and ownership.....	455
Apache and iptables.....	455
Apache and SELinux.....	456
Understanding the Apache configuration files	457
Using directives.....	457
Understanding default settings.....	460
Adding a virtual host to Apache	462
Allowing users to publish their own web content.....	464
Securing your web traffic with SSL/TLS	465
Understanding how SSL is configured.....	467
Generating an SSL key and self-signed certificate.....	469
Generating a certificate signing request	470
Troubleshooting Your Web Server	471
Checking for configuration errors	472
Accessing forbidden and server internal errors	474
Summary.....	475
Exercises	475

Contents

Chapter 18: Configuring an FTP Server	477
Understanding FTP.....	477
Installing the vsftpd FTP Server.....	479
Starting the vsftpd Service.....	480
Securing Your FTP Server.....	483
Opening up your firewall for FTP.....	483
Allowing FTP access in TCP wrappers.....	486
Configuring SELinux for your FTP server	486
Relating Linux file permissions to vsftpd	488
Configuring Your FTP Server	488
Setting up user access	488
Allowing uploading	489
Setting up vsftpd for the Internet	491
Using FTP Clients to Connect to Your Server.....	492
Accessing an FTP server from Firefox	493
Accessing an FTP server with the lftp command	493
Using the gFTP client.....	495
Summary.....	496
Exercises	497
Chapter 19: Configuring a Windows File Sharing (Samba) Server	499
Understanding Samba	499
Installing Samba.....	500
Starting and Stopping Samba.....	502
Starting the Samba (smb) service	503
Starting the NetBIOS (nmbd) name server	505
Stopping the Samba (smb) and NetBIOS (nmb) services.....	506
Securing Samba	506
Configuring firewalls for Samba	507
Configuring SELinux for Samba.....	508
Setting SELinux Booleans for Samba.....	508
Setting SELinux file contexts for Samba	510
Configuring Samba host/user permissions	510
Configuring Samba.....	511
Using system-config-samba	511
Choosing Samba server settings	511
Configuring Samba user accounts	512
Creating a Samba shared folder	513
Checking the Samba share.....	514
Configuring Samba in the smb.conf file	516
Configuring the [global] section.....	516
Configuring the [homes] section	518
Configuring the [printers] section.....	519
Creating custom shared directories	519

Accessing Samba Shares	521
Accessing Samba shares in Linux.....	522
Accessing Samba shares in Windows	524
Using Samba in the Enterprise	525
Summary.....	525
Exercises	526
Chapter 20: Configuring an NFS File Server	527
Installing an NFS Server.....	529
Starting the NFS service.....	530
Sharing NFS Filesystems.....	531
Configuring the /etc/exports file.....	532
Hostnames in /etc/exports	533
Access options in /etc/exports.....	534
User mapping options in /etc/exports	534
Exporting the shared filesystems.....	535
Securing Your NFS Server	536
Opening up your firewall for NFS	537
Allowing NFS access in TCP wrappers.....	539
Configuring SELinux for your NFS server	539
Using NFS Filesystems	540
Viewing NFS shares.....	540
Manually mounting an NFS filesystem.....	541
Mounting an NFS filesystem at boot time	542
Mounting noauto filesystems	543
Using mount options.....	543
Using autofs to mount NFS filesystems on demand	545
Automounting to the /net directory.....	546
Automounting home directories.....	547
Unmounting NFS filesystems.....	549
Summary.....	549
Exercises	550
Chapter 21: Troubleshooting Linux	551
Boot-Up Troubleshooting	551
Understanding Startup Methods	552
Starting with System V init scripts	552
Starting with systemd.....	553
Starting with Upstart.....	554
Starting from the firmware (BIOS or UEFI)	554
Troubleshooting BIOS setup	555
Troubleshooting boot order.....	556
Troubleshooting the GRUB boot loader	557
Starting the kernel.....	559
Troubleshooting the initialization system	560

Contents

Troubleshooting System V initialization	560
Troubleshooting rc.sysinit	561
Troubleshooting runlevel processes	562
Troubleshooting systemd initialization	566
Troubleshooting Software Packages	568
Fixing RPM databases and cache	572
Troubleshooting Networking	573
Troubleshooting outgoing connections	573
View network interfaces	574
Check physical connections	574
Check routes	575
Check hostname resolution	576
Troubleshooting incoming connections	577
Check if the client can reach your system at all	577
Check if the service is available to the client	578
Check the firewall on the server	578
Check the service on the server	579
Troubleshooting Memory	580
Uncovering memory issues	581
Checking for memory problems	583
Dealing with memory problems	584
Troubleshooting in Rescue Mode	585
Summary	587
Exercises	587

Part V: Learning Linux Security Techniques

589

Chapter 22: Understanding Basic Linux Security	591
Understanding Security Basics	591
Implementing physical security	591
Implementing disaster recovery	592
Securing user accounts	593
One user per user account	593
Limit access to the root user account	594
Setting expiration dates on temporary accounts	594
Removing unused user accounts	595
Securing passwords	596
Choosing good passwords	597
Setting and changing passwords	598
Enforcing best password practices	599
Understanding the password files and password hashes	601
Securing the filesystem	603
Managing dangerous filesystem permissions	603
Securing the password files	604

Locking down the filesystem	606
Managing software and services	607
Updating software packages	607
Keeping up with security advisories	607
Advanced implementation	608
Monitoring Your Systems	608
Monitoring log files	608
Monitoring user accounts	612
Detecting counterfeit new accounts and privileges	612
Detecting bad account passwords	614
Monitoring the filesystem	615
Verifying software packages	615
Scanning the filesystem	616
Detecting viruses and rootkits	618
Auditing and Reviewing Linux	622
Conducting compliance reviews	623
Conducting security reviews	623
Summary	624
Exercises	624

Chapter 23: Understanding Advanced Linux Security 627

Implementing Linux Security with Cryptography	627
Understanding hashing	628
Understanding encryption/decryption	630
Understanding cryptographic ciphers	630
Understanding cryptographic cipher keys	631
Understanding digital signatures	637
Implementing Linux cryptography	639
Ensuring file integrity	639
Encrypting a Linux filesystem	640
Encrypting a Linux directory	642
Encrypting a Linux file	645
Encrypting Linux with miscellaneous tools	645
Using Encryption from the Desktop	646
Implementing Linux Security with PAM	648
Understanding the PAM authentication process	649
Understanding PAM contexts	650
Understanding PAM control flags	651
Understanding PAM modules	652
Understanding PAM system event configuration files	653
Administering PAM on your Linux system	654
Managing PAM-aware application configuration files	654
Managing PAM system event configuration files	655
Implementing resources limits with PAM	657
Implementing time restrictions with PAM	658

Contents

Enforcing good passwords with PAM.....	660
Encouraging sudo use with PAM.....	664
Locking accounts with PAM.....	665
Obtaining more information on PAM.....	667
Summary.....	668
Exercises.....	668
Chapter 24: Enhancing Linux Security with SELinux	669
Understanding SELinux Benefits.....	669
Understanding How SELinux Works.....	671
Understanding type enforcement.....	671
Understanding multi-level security.....	672
Implementing SELinux security models.....	673
Understanding SELinux operational modes.....	673
Understanding SELinux security contexts.....	674
Understanding SELinux policy types.....	677
Understanding SELinux policy rule packages.....	678
Configuring SELinux.....	679
Setting the SELinux mode.....	680
Setting the SELinux policy type.....	682
Managing SELinux security contexts.....	683
Managing the user security context.....	684
Managing the file security context.....	684
Managing the process security context.....	685
Managing SELinux policy rule packages.....	686
Managing SELinux via booleans.....	688
Monitoring and Troubleshooting SELinux.....	689
Understanding SELinux logging.....	689
Reviewing SELinux messages in the audit log.....	690
Reviewing SELinux messages in the messages log.....	690
Troubleshooting SELinux logging.....	691
Troubleshooting common SELinux problems.....	692
Using a nonstandard directory for a service.....	692
Using a nonstandard port for a service.....	693
Moving files and losing security context labels.....	693
Booleans set incorrectly.....	694
Putting It All Together.....	694
Obtaining More Information on SELinux.....	695
Summary.....	695
Exercises.....	696
Chapter 25: Securing Linux on a Network	699
Auditing Network Services.....	699
Evaluating access to network services with nmap.....	701
Using nmap to audit your network services advertisements.....	704

Controlling access to network services	708
Working with Firewalls.....	710
Understanding firewalls	710
Implementing firewalls	711
Starting with firewalld.....	712
Understanding the iptables utility	713
Using the iptables utility.....	716
Summary.....	724
Exercises	724

Part VI: Extending Linux into the Cloud

727

Chapter 26: Using Linux for Cloud Computing 729

Overview of Linux and Cloud Computing.....	729
Cloud hypervisors (a.k.a. compute nodes).....	730
Cloud controllers	730
Cloud storage	731
Cloud authentication	731
Cloud deployment and configuration.....	732
Cloud platforms.....	732
Trying Basic Cloud Technology.....	732
Setting Up a Small Cloud	734
Configuring hypervisors.....	735
Step 1: Get Linux software	735
Step 2: Check your computers	735
Step 3: Install Linux on hypervisors.....	736
Step 4: Start services on the hypervisors	737
Step 5: Edit /etc/hosts or set up DNS.....	738
Configuring storage	738
Step 1: Install Linux software	738
Step 2: Configure NFS share	739
Step 3: Start the NFS service.....	739
Step 4: Mount the NFS share on the hypervisors.....	740
Creating virtual machines.....	740
Step 1: Get images to make virtual machines.....	741
Step 2: Check the network bridge.....	741
Step 3: Start Virtual Machine Manager (virt-manager)	741
Step 4: Check connection details.....	742
Step 5: Create a new virtual machine	743
Managing virtual machines.....	744
Migrating virtual machines.....	745
Step 1: Identify other hypervisors.....	745
Step 2: Migrate running VM to another hypervisor	746
Summary.....	747
Exercises	747

Contents

Chapter 27: Deploying Linux to the Cloud.	749
Getting Linux to Run in a Cloud.....	749
Creating Linux Images for Clouds	751
Configuring and running a cloud-init cloud instance.....	751
Investigating the cloud instance	753
Cloning the cloud instance.....	754
Trying an Ubuntu cloud image	756
Expanding your cloud-init configuration	757
Adding ssh keys with cloud-init.....	757
Adding network interfaces with cloud-init.....	758
Adding software with cloud-init	758
Using cloud-init in enterprise computing	759
Using OpenStack to Deploy Cloud Images	760
Starting from the OpenStack Dashboard.....	761
Configuring your OpenStack virtual network	761
Configuring keys for remote access.....	763
Launching a virtual machine in OpenStack.....	764
Accessing the virtual machine via ssh.....	765
Using Amazon EC2 to Deploy Cloud Images.....	765
Summary.....	766
 Part VII: Appendixes	 769
Appendix A: Media	771
Appendix B: Exercise Answers	781
