Author Biography xi

Book Audience and Overview xiii

Preface xv

1. Industrial Microbiology

- 1.1 Introduction 1
- 1.2 Role of Biotechnology 2
- 1.3 Role of Biosciences 5
- 1.4 Microbe Functions 5
- 1.5 Process Fermentation 7
- 1.6 Application of Fermentation Processes 9
- 1.7 Bioprocess Products 10
- 1.8 Production of Lactic Acid 11
- 1.9 Production of Vinegar 13
- 1.10 Production of Amino Acids
(Lysine and Glutamic Acid) and Insulin 14
- 1.11 Antibiotics, Production of Penicillin 15
- 1.12 Production of Enzymes 16
- 1.13 Production of Baker's Yeast 16
- References 18

2. Enzyme Technology

- 2.1 Introduction 20
- 2.2 Enzyme Elementary Reaction Rate 21
- 2.3 Enzyme Classifications 28
- 2.4 Enzymes Specific Function 30
- 2.5 Enzymes Act as Catalysts 30
- 2.6 Inhibitors of Enzyme-Catalyzed
Reactions 31
- 2.7 Industrial Application of Enzymes 33
- 2.8 Coenzymes 35
- 2.9 Effect of pH on Enzyme Activities 37
- 2.10 Enzyme Unit Activities 37

- 2.11 Enzyme Deactivation 37
- Nomenclature 38
- 2.12 Solve Problems 39
- References 40
- 2.13 Case Study: Solid-State Fermentation of
Sugarcane Bagasse in a Tray Bioreactor for
Production of Lipase Using *Rhizopus*
Oryzae 41
- 2.13.1 Introduction 41
- 2.13.2 Material and Methods 42
- 2.13.3 Results and Discussion 44
- References 49

3. Gas and Liquid System (Aeration and Agitation)

- 3.1 Introduction 53
- 3.2 Aeration and Agitation 53
- 3.3 Air Sparger 56
- 3.4 Agitation and Mixing Phenomena 57
- 3.5 Types of Agitator 57
- 3.6 OTR in a Fermenter 58
- 3.7 Mass Transfer in a Gas–Liquid System 59
- 3.8 Gas Hold-Up 60
- 3.9 Mass Transfer Coefficients for Stirred
Tanks 61
- 3.10 Agitated System and Mixing
Phenomena 63
- 3.11 Mass Transfer Limited Process 63
- Nomenclature 74
- Greek Symbols 75
- References 75
- 3.13 Case Study: Oxygen Transfer Rate Model in an
Aerated Tank for Pharmaceutical
Wastewater 76
- 3.13.1 Introduction 76
- 3.13.2 Material and Method 78

- 3.13.3 Results and Discussion 79
3.13.4 Conclusion 81
Nomenclature 82
References 82
- 3.14 Case Study: Fuel and Chemical Production from the Water—Gas Shift Reaction by Fermentation Processes 83
- 3.14.1 Introduction 83
3.14.2 Kinetics of Growth in a Batch Bioreactor 84
3.14.3 Effect of Substrate Concentration on Microbial Growth 88
3.14.4 Mass Transfer Phenomena 91
3.13.5 Kinetic of Water Gas Shift Reaction 93
3.14.6 Growth Kinetics of CO Substrate on *C. ljungdahlii* 96
Nomenclature 98
Acknowledgments 99
References 99
- #### 4. Fermentation Process Control
- 4.1 Introduction 104
4.2 Bioreactor Controlling Probes 105
4.3 Characteristics of Bioreactor Sensors 106
4.4 Temperature Measurement and Control 108
4.5 Dissolved Oxygen Measurement and Control 109
4.6 pH/Redox Measurement and Control 110
4.7 Detection and Prevention of Foam 112
4.8 Biosensors 113
Nomenclature 124
References 124
- #### 5. Growth Kinetics
- 5.1 Introduction 129
5.2 Indirect Measurements of Cell Growth 129
5.3 Cell Growth in Batch Culture 131
5.4 Growth Phases 131
5.5 Kinetics of Batch Culture 132
5.6 Growth Kinetics for Continuous Culture 133
5.7 Material Balance for Continuous Stirred Tank Reactor (CSTR) 137
5.8 Enzyme Reaction Kinetics 145
5.9 Unstructured Kinetic Model 173
Nomenclature 179
References 180
- 5.11 Case Study: Enzyme Kinetic Models for Resolution of Racemic Ibuprofen Esters in a Membrane Reactor 181
- 5.11.1 Introduction 181
5.11.2 Enzyme Kinetics 182
5.11.3 Enzyme Kinetics for Rapid Equilibrium System (Quasi-Equilibrium) 187
5.11.4 Derivation of Enzymatic Rate Equation from Rapid Equilibrium Assumption 187
5.11.5 Verification of Kinetic Mechanism 189
References 191
- #### 6. Bioreactor Design
- 6.1 Introduction 193
6.2 Bioreactors: Background 194
6.3 Type of Bioreactor 195
6.4 Stirred Tank Bioreactor 198
6.5 Bubble Column Fermenter 201
6.6 Airlift Bioreactors 202
6.7 Heat Transfer 203
6.8 Design Equations for CSTR Fermenter 205
6.9 Temperature Effect on Rate Constant 209
6.10 Scale-Up of Stirred-Tank Bioreactor 210
6.11 Biological Transport of Oxygen through Cells 217
Nomenclature 223
References 223
- #### 7. Downstream Processing
- 7.1 Introduction 228
7.2 Downstream Processing 228
7.3 Filtration 231
7.4 Centrifugation 233
7.5 Sedimentation 235
7.6 Flotation 237
7.7 Emerging Technology for Cell Recovery 238
7.8 Cell Disruption 238
7.9 Solvent Extraction 239
7.10 Adsorption 242
7.11 Chromatography 244
7.12 Crystallization Process 253
7.13 Freeze-Drying 255
Nomenclature 255
References 256

8. Immobilization of Microbial Cells for the Production of Organic Acid and Ethanol

- 8.1 Introduction 259
- 8.2 Immobilized Microbial Cells 260
- 8.3 ICR Experiments 263
- 8.4 ICR Rate Model 263
- Nomenclature 266
- References 266
- 8.6 Case Study: Ethanol Fermentation in an Immobilized Cell Reactor Using *Saccharomyces cerevisiae* 267
- 8.6.1 Introduction 267
- 8.6.2 Materials and Methods 268
- 8.6.3 Results and Discussion 272
- 8.6.4 Conclusion 281
- Nomenclature 282
- Acknowledgment 282
- References 282
- 8.7 Fundamentals of Immobilization Technology, and Mathematical Model for ICR Performance 284
- 8.7.1 Immobilization of Microorganisms by Covalent Bonds 284
- 8.7.2 Oxygen Transfer to Immobilized Microorganisms 284
- 8.7.3 Substrate Transfer to Immobilized Microorganisms 285
- 8.7.4 Growth and Colony Formation of Immobilized Microorganisms 286
- 8.7.5 Immobilized Systems for Ethanol Production 288
- Reference 289

9. Material and Elemental Balance

- 9.1 Introduction 291
- 9.2 Media Preparation for Fermentation 292
- 9.3 Growth of Stoichiometry and Elemental Balances 303
- 9.4 Energy Balance for Continuous Ethanol Fermentation 305
- 9.5 Mass Balance for Biological Processes 306
- 9.6 Conservation of Mass Principle 309
- 9.7 Embden–Meyerhof–Parnas Pathway 318
- References 326

10. Application of Fermentation Processes

- 10.1 Introduction 330
- 10.2 Production of Ethanol by Fermentation 330
- 10.3 Benefits from Bioethanol Fuel 331
- 10.4 Stoichiometry of Biochemical Reaction 331
- 10.5 Optical Cell Density 332
- 10.6 Kinetics of Growth and Product Formation 333
- 10.7 Preparation of Stock Culture 334
- 10.8 Inoculum Preparation 335
- 10.9 Inoculation of Seed Culture 336
- 10.10 Analytical Method for Sugar Analysis 337
- 10.11 Analytical Method for Ethanol Analysis 338
- 10.12 Refractive Index Determination 338
- 10.13 Cell Dry Weight Measurements 339
- 10.14 Yield Calculation 339
- 10.15 Batch Fermentation Experiment 340
- 10.16 Continuous Fermentation Experiment 341
- 10.17 Media Sterilization 342
- 10.18 Batch Experiment 342
- 10.19 Expected Results 343
- References 344

11. Production of Antibiotics

- 11.1 Introduction 346
- 11.2 Herbal Medicines and Chemical Agents 347
- 11.3 The History of Penicillin 348
- 11.4 Production of Penicillin 349
- 11.5 Microorganisms and Media 349
- 11.6 Inoculum Preparation 349
- 11.7 Filtration and Extraction of Penicillin 352
- 11.8 Experimental Procedure 352
- 11.9 Fermenter Description 352
- 11.10 Analytical Method for Bioassay and Detection of Antibiotic 352
- 11.11 Antibigram and Biological Assay 353
- 11.12 Submerged Culture 354
- 11.13 Bioreactor Design and Control 355
- 11.14 Estimation of Dimension of Fermenter 356
- 11.15 Determination of the Reynolds Number 358
- 11.16 Determination of Power Input 358
- 11.17 Determination of Oxygen Transfer Rate 359

- 11.18 Design Specification Sheet for the Bioreactor 361
- References 361

12. Production of Citric Acid

- 12.1 Introduction 363
- 12.2 Production of Citric Acid in Batch Bioreactors 364
- 12.3 Factors Affecting Mold Growth and the Fermentation Process 365
- 12.4 Starter or Seeding an Inoculum 367
- 12.5 Seed Culture 367
- 12.6 Citric Acid Production 367
- 12.7 Analytical Method 368
- 12.8 Processes for Recovery and Purification of Citric Acid 369
- 12.9 Experimental Run 369
- 12.10 Kinetic Model in Batch Citric Acid Fermentation 371
- Nomenclature 373
- References 373

13. Bioprocess Scale-up

- 13.1 Introduction 375
- 13.2 Scale-up Procedure from Laboratory Scale to Plant Scale 376
- 13.3 Bioreactor Design Criteria 384
- 13.4 Continuous Stirred Tank Reactor Chemostat versus Tubular Plug Flow 388
- 13.5 Dynamic Model and Oxygen Transfer Rate in Activated Sludge 399
- 13.6 Aerobic Wastewater Treatment 410
- Nomenclature 415
- References 416

14. Single-Cell Protein

- 14.1 Introduction 418
- 14.2 Dissolved Oxygen in Single-Cell Protein Production 419
- 14.3 Batch and Continuous Fermentation for Production of Single-Cell Protein 419
- 14.4 Batch Experiment for Production of Baker's Yeast 421
- 14.5 Separation of Microbial Biomass 421
- 14.6 Background 422
- 14.7 Production Methods 422

- 14.8 Media Preparation for Single-Cell Protein Production 424
- 14.9 Analytical Methods 424
- 14.10 Single-Cell Protein Processes 426
- 14.11 Nutritional Value of Single-Cell Protein 428
- 14.12 Organisms and Substrates for Single-Cell Protein Production 429
- 14.13 Advantages and Disadvantages of Single-Cell Protein 432
- 14.14 Preparation for Experimental Run 433
- References 433

15. Sterilization

- 15.1 Introduction 435
- 15.2 Control of Microbial Population by Physical Agents 436
- 15.3 Death Rate of Living Organisms 437
- 15.4 Batch Sterilization 437
- 15.5 Continuous Sterilization 439
- 15.6 Hot Plates 441
- 15.7 High-Temperature Sterilization 442
- 15.8 Sterilized Media for Microbiology 442
- 15.9 Dry Heat Sterilization 450
- 15.10 Sterilization with Filtration 450
- 15.11 Microwave Sterilization 450
- 15.12 Electron Beam Sterilization 451
- 15.13 Chemical Sterilization 451
- 15.14 Low-Temperature Sterilization 452
- Nomenclature 452
- References 452

16. Membrane Reactor

- 16.1 Introduction 455
- 16.2 Membrane Bioreactors 457
- 16.3 Membrane and MBR Development 465
- References 466
- 16.4 Case Study: Enhanced Ethanol Fermentation in a Continuous Membrane Bioreactor: Pervaporation Technique 468
- 16.4.1 Introduction 468
- 16.4.2 Experimental 470
- 16.4.3 Results and Discussion 472
- 16.4.4 Conclusion 481
- Acknowledgments 481
- References 481

- 16.5 Case Study: Inorganic Zirconia γ -Alumina-Coated Membrane on Ceramic Support 483
- 16.5.1 Introduction 483
- 16.5.2 Materials and Methods 485
- 16.5.3 Results and Discussion 491
- 16.5.4 Conclusion 492
- Acknowledgments 492
- References 493
17. Advanced Downstream Processing in Biotechnology
- 17.1 Introduction 497
- 17.2 Protein Products 497
- 17.3 Cell Disruption 498
- 17.4 Protein Purification 500
- 17.5 General Problems Associated With Conventional Techniques 501
- 17.6 Fluidized Bed Adsorption 502
- 17.7 Design and Operation of Liquid Fluidized Beds 504
- 17.8 Experimental Procedure 510
- 17.9 Process Integration in Protein Recovery 511
- Nomenclature 513
- References 513
- 17.11 Case Study: Biochemical Characterization of a Custom Expanded Bed Column for Protein Purification 516
- 17.11.1 Introduction 516
- 17.11.2 Materials and Methods 517
- 17.11.3 Results and Discussion 518
- 17.11.4 Conclusion 524
- References 525
18. Microbial Fuel Cells: A New Source of Power
- 18.1 Introduction 528
- 18.2 Biological Fuel Cell 529
- 18.3 Microbial Fuel Cell 531
- Acknowledgment 551
- References 551
19. Biological Treatment
- 19.1 Introduction 558
- 19.2 Organic Removal in Sustainable Microbial Growth 558
- 19.3 Microbial Metabolism 559
- 19.4 Microbial Growth Kinetics 561
- 19.5 Growth Rate and Treatment Kinetics 562
- 19.6 Removal Mechanisms in Biological Processes 568
- 19.7 Aerobic Biooxidation 569
- 19.8 Anaerobic Digestion 572
- 19.9 Abiotic Losses 576
- 19.10 Volatilization 578
- 19.11 Biological Nitrification and Denitrification 579
- 19.12 Biological Treatment Processes: Suspended and Attached Growth 586
- References 594
20. Biofuel Production
- 20.1 Biofuel Production and Global Scenarios 597
- 20.2 Feedstock for Biofuel Production 600
- 20.3 Processes and Technologies 609
- 20.4 Intensification and Integration 622
- 20.5 Economic Perspective 624
- References 625
- Appendix: Constants and Conversion Factors 631**
- Index 633**
