

Contents

Preface	xi
Acknowledgments	xiii
1 Introduction	1
2 CCU Hot Gas Expanders	5
2.1 Historical Background	5
2.2 Process Unit Descriptions and Applications	12
2.3 Expander Applications	19
2.4 Expander Performance	114
3 Dirty Gas and Particle Separation	133
3.1 Dirty Gas	133
3.2 Particle Separation	135
3.3 Expander Erosion	145
3.4 CCU Expander Catalyst Deposition	165
3.5 CCU Expander Corrosion	180
4 CCU Expander Auxiliary Systems	199
4.1 Expander Piping	199
4.2 Structural Design Considerations	200
4.3 Piping Pressure/“Blow-Off” Load	201
4.4 Allowable Force and Moments	202
4.5 Flange Design	204
4.6 Fasteners	206
4.7 Flange Gaskets	207
4.8 Expansion Joints	210
4.9 Lube Oil System	213

4.10	Expander Cooling System	215
4.11	Expander Sealing System	217
4.12	Bearing Housing Seal System	219
4.13	Expander Start-Up Steam	220
4.14	Expander Casing and Duct Drains	221
4.15	Online Expander Flow-Path Cleaning	222
4.16	Abrasive Cleaning System	222
4.17	Thermal Cleaning	224
4.18	Online Blade Photography	225
4.19	Supervisory Instrumentation	229
4.20	Expander Alarm and Shutdowns	230

5 Common Operational Problems and Failure

Case Studies	233	
5.1	Plugging of Critical Flow Orifice	233
5.2	Inlet and Piping Flange Failures	234
5.3	Nose Cone Failures	236
5.4	Expander Rotor Disc Failure—Corrosion	238
5.5	Rotor Rubbing	244
5.6	Expander Casing Drains	246
5.7	Expander Online Cleaning	247
5.8	Catalyst Deposition and Plugging	249
5.9	Exhaust Diffuser Failure	251
5.10	Expander Support: Unit Vibration	252
5.11	Air-Blower Failures	255

6 Nitric Acid Expanders for Chemical

Applications	259	
6.1	Introduction	259
6.2	Nitric Acid Process	260
6.3	Machinery Selection	264
6.4	Expander Selection and Design Considerations	266
6.5	Nitric Acid Expander Design Considerations	274
6.6	Expander Construction	275
6.7	Expander Component Design	277
6.8	Auxiliary Equipment	302
6.9	Operational Considerations	305
6.10	Maintenance	307
6.11	Nitric Acid Expander Common Operational Problems	309

7	Turboexpanders/Cryogenic	
	Turboexpanders	319
7.1	Introduction	319
7.2	Historical Background	320
7.3	Machinery Design and Configuration	321
7.4	Process Descriptions and Applications	334
8	Rotor Dynamics	339
8.1	Introduction	339
8.2	Introduction to Dynamics	340
8.3	Procedural Steps in the Analysis	341
9	Bladed Disc Vibration and Reliability	349
9.1	Brief Description of Analytical Methods	350
9.2	Vibration Behavior of Bladed Disc System	357
9.3	Evaluation Concepts for Blade Resonant Vibration	361
9.4	Effect of Mistuning of a Bladed Disc System on Vibration Response	372
9.5	Special Topics Related to Reliability of the Expander Blade	379
9.6	Reliability Evaluation of Blade Design	385
9.7	Mathematical Expression of Work Done by Mistuned Force on a Mistuned System	388
10	Damage in Material and Life Analysis	391
10.1	Behavior of Material under Static Load	392
10.2	Behavior of Material under Cyclic Loading	395
10.3	Definition of Force	398
10.4	Damage Mechanisms in Material	404
10.5	Estimation of Component Life	414
10.6	Life Evaluation during Creep Fatigue Interaction	430
10.7	Linear Elastic Fracture Mechanics	435
10.8	Failure of Cracked Components Fracture Mechanics Approach	439
10.9	Crack Growth during Thermal Cycle	444
10.10	Creep Crack Growth	446
10.11	Cumulative Damage	447
10.12	Evaluation of Damage after Service	452
10.13	Summary	459

11	Probabilistic Concept and Risk Assessment	... 461
11.1	Brief Probabilistic Theory Applied in the Design Process	462
11.2	Probabilistic Aspect Leading to Estimation of Likelihood of Failure	469
11.3	Basic Probabilistic Theory Using Limit Function	471
11.4	Examples Pertaining to Expander Design	... 471
11.5	Estimation of Business Risk	507
11.6	Summary	511
	Bibliography	513
	References	517
	Index	521
